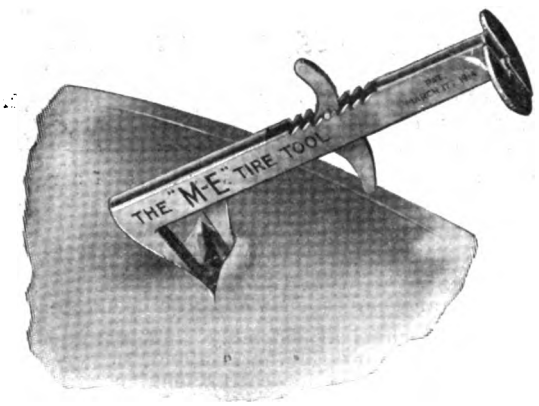
The "Motor-Eye" SEES how the Motor FEELS



It is the most accurate and reliable instrument of the kind for detecting motor trouble before damage is done. It is the only absolutely certain means of keeping in touch with the running engine. It is a safeguard against expensive engine repairs. Retail price, $2.50. Dealer discounts, 25 to 40%, delivered.

The "M-E" Tire Tool

"Repair the cut and save the tire."

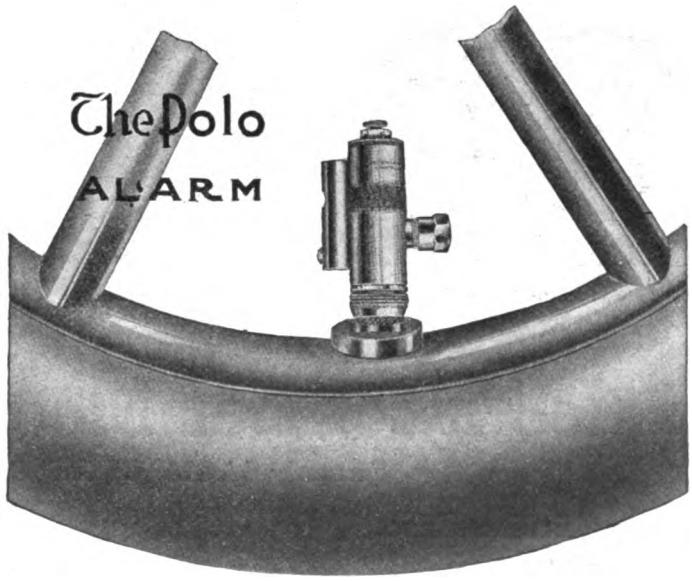
—is the most convenient tool yet devised for holding open surface cuts in tires, for easy repairs. A rare time and trouble saver, that every motorist can afford, at 25c. Dealers' discounts, 33 1-3 to 40%.

The Improved Polo Tire Alarm—Model No. 15

tells the driver of a running car INSTANTLY when the pressure in any tire falls to the minimum safety point.

It is an automatic pressure gauge that is attached to the valve stem when a new tube is installed and need never be removed until tube is changed. Tire can be inflated or "gauged" without removing Alarm.

The Alarm itself can be entirely cut off, if its service as a warning of low pressure is not desired. Send for detailed particulars. It is a money maker for the Dealer and a DOLLAR SAVER for the user.



All these are good sellers. They mean money for you. Write today for full discount lists and particulars.

"Will Replace All Other Gas Engines"

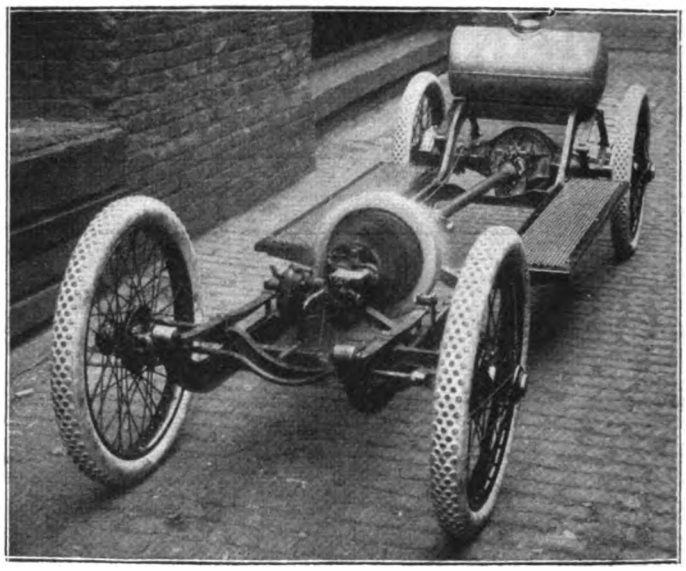
That is what many of the best and most favorably known gas engine authorities and mechanical engineers say for the Macomber Rotary Motor.

HERE IS SOME OF THE PHYSICAL EVIDENCE THAT VERIFIES THAT OPINION

An Extraordinary Photograph

This is a view of the Eagle Cycle Car chassis before completion with a 12-14 H. P. Macomber Rotary Engine revolving at 1500 r. p. m. The camera that took this picture is capable of instantly registering the slightest jar or movement, and can catch a bullet in the air so that it appears to be standing still. Its speed is 1-1000 of a second.

This photograph, however, was a time exposure which would permit registering on the negative every movement, no matter how slight. This chassis, standing on inflated tires without any load (less than three pints of gasoline in the tank) would make jarring due to engine action show clearly on the negative. This is a print of the negative without any retouching of any character.



In addition to the absence of vibration, the following facts should impress anyone who is interested in gas power machinery:

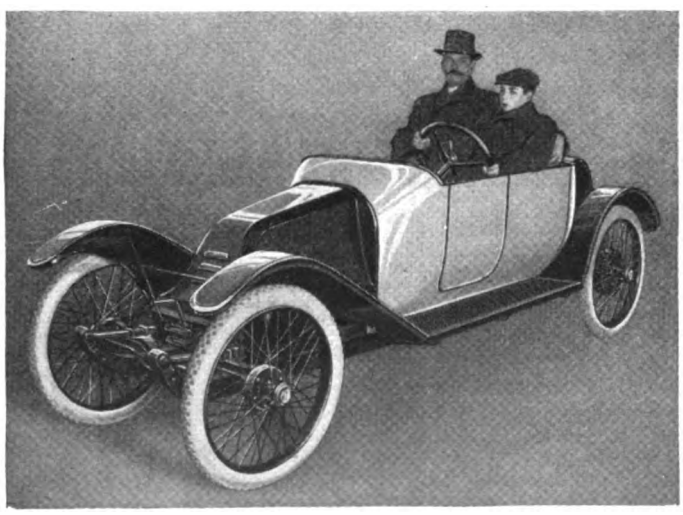
It is of exceedingly light weight.

A 14 H. P. Macomber Engine, five-cylinder, weighs 115 pounds, including muffler.

A 60 H. P. Macomber Engine, seven-cylinder, weighs 250 pounds, against 1000 pounds or more of a reciprocating engine.

Being air cooled, there is no radiator, fly wheel, pump, fan or other contrivances to add weight, cost and trouble to your car.

There is no complicated wiring system on a Macomber, there being no wire used at all. The spark plugs fire as they pass the sparking plate attached to the magneto. This is another expense and trouble eliminator.



Boy Driving Eagle Light Car Equipped with Macomber Rotary Engine, Showing Plenty of Room for Passenger.

The mechanical efficiency and power of a Macomber Rotary Engine is about 30 per cent. greater than a reciprocating engine of equal rated power. Laboratory tests, including that of Armour Institute, Chicago, prove 82.6 per cent. efficiency for the Macomber Engine. Fifty per cent. is considered good for the ordinary reciprocating engine.

From 40 to 50 miles to the gallon of gasoline is the rule of a Macomber 14 H. P. engine and a 36-inch tread cycle or light car.

Bore and stroke of the five-cylinder 14 H. P. Macomber Rotary Engine are 2 9/16 inches by three inches respectively.

Any standard magneto and carburetor can be used.

The Macomber Rotary Engine is to be built in all sizes for all purposes. It is suitable for any gas engine need.

The Eagle-Macomber Motor Car Company controls the manufacturing and sales right for the cycle and light car industry.

Gas engine users and dealers who may be interested, and who want further particulars, should address immediately

NATIONAL UNITED SERVICE

What It Means to DEALERS AND GARAGEMEN

THE National United Service Co. of Detroit, Mich., is an organization created for the purpose primarily of establishing NUSCO (which word represents the initials of the company) SERVICE STATIONS, along the entire length of the Lincoln Highway and its main arteries which ultimately lead to and include every mile of travelable roadway in the United States.

These NUSCO SERVICE STATIONS will secure the bulk of local as well as transient patronage, not only because of the merits of the manner in which each will be operated, but mainly because of the convenience, economy and protection afforded the touring public, as set forth later on in this advertisement.

This company has been under way for nearly two years. All plans were decided upon before announcing ourselves to the public. For several months these plans have been developing and now we are all set and ready to go forward at Top Speed.

WE have taken on the entire outputs of 46 different concerns who manufacture various lines of automobile accessories and motor car parts, and are now ready to announce a complete NUSCO assortment ranging from spark plugs to motor trucks.

Each line has been selected on quality and marketability—or saleability—and many of the largest factories in the automobile industry are among those whose products, as handled by us will bear the name NUSCO.

We are in position to grant NUSCO SERVICE STATIONS extreme discounts on everything handled by us, which, by the way, includes two-passenger small cars, five-passenger touring cars, light commercial cars and heavy motor trucks, besides every accessory for which there is a demand on the part of the touring public.

You will like our way of doing business —our lines, our discounts, our plans and our progressiveness.

See us at the Great Northern Hotel, Chicago, Jan. 23rd to 30th, inclusive.
Our president, general manager, sales manager, superintendent of service stations, travelling representatives and many of our SATISFIED CUSTOMERS who are already operating NUSCO SERVICE STATIONS will be in attendance to tell you how the NUSCO PLAN works out.

THE LARGEST MANUFACTURERS OF FORD SPECIALTIES IN THE WORLD

Patronize the Dealer Who Gives you What you Ask For.

The stores selling standard products are sought by the careful buyer.

Such purchasers know what they want, and it is a waste of time for dealers to "talk" or attempt to push the sale of "Just as Goods".

Remember, when a dealer offers you an imitation article he makes a bigger profit, otherwise he would not handle it. What do you get if you buy his "Just as Good"? Certainly not the quality for which you pay.

The name of a well known maker on a product is the best assurance you have of the uniform quality of the product. Your salvation from injury or deception is to ask for products by name of Maker or Trademark Brand and the determination to demand that the dealer supply the identical product asked for.

Good-service dealers will not attempt to offer you substitutes, because they appreciate your patronage and realize that the growth of their business depends upon giving customers what they ask for.

FORD SPECIALTIES

MADE IN USA

"Get What You Ask For"

CYLINDER WATER CONNECTIONS.

Ever since the Ford Model "T" came out in 1908 the water connections have given more or less trouble by breaking, despite the fact that they have been strengthened several times since their first appearance. Our connections are made from malleable iron and positively will not break, furthermore, we add a feature that will appeal to all who have had to remove a radiator from a Ford. This feature is the slots for bolts instead of the round holes formerly used, and means that simply loosening the bolts permits removal of the connection and in replacing the connection this will save a lot of time and trouble. Either top or side.

PRICE 25c EACH.

STEERING WHEEL PULLER.

The steering wheel on a Ford is always very hard to remove, and in some cases it is impossible to budge it. When necessary to do this for replacing worn gears and repacking with grease don't use a hammer. The Remover will do it in a jiffy without even marring the paint. Made from semi-steel, black enamelled and will last years.

PRICE 50c.

LINED BRAKE SHOES.

We have had a large call for a lined brake shoe during the last few months, but up to now have not seen any thing worthy of consideration for the reason that the small diameter and width of the Ford Brake Drum prevented the installation of shoes large enough to give satisfactory wear. There is no brake that is better as far as action goes, than an asbestos lined, and we have worked the problem out so that the main objection is eliminated. The Shoes are made from malleable iron and will not break, the lining is put on in such a way that it can be renewed by any owner at a cost of 25c, which is our charge for the lining and rivets. We do not claim a greater mileage than 2500 in a hilly country, but the renewable feature means one cent per hundred miles against the cost of an entire new set of shoes of any other make. Complete set of two with springs.

PRICE $1.00.

BRAKE ROD CLEVIS ANTI-RATTLER.

This consists of a special hardened bolt and nut fitted with cotter pin and lock washers. When brake rods rattle simply remove old clevis pin and replace with this bolt, tightening enough to prevent rattle. This adjustment will last for a long time and further adjustments can be made by simply taking up on the nut. This idea is superior to any we have ever seen, as it requires no machine work and it can be installed by any owner in half an hour. Furnished complete, including bolt, nut, lock washers and cotter pin. Four of these required on a Ford Car.

PRICE 10c EACH.

CARBON SCRAPER.

This is a special tool designed to remove the carbon from the Ford Engine when the cylinder head is removed. It is made from tempered steel and it will remove the carbon in less time than any other tool on the market.

PRICE 10c EACH.

FORD PISTONS.

These pistons are made from the very highest grade close grained gray iron, and unlike the regular article, they are ground to size, which not only insures the size being right, but means that each piston is exactly round. They are made to the exact size of the factory piston and also five thousandths oversize, the latter to be used in the old worn cars. It is advisable to put in four new pistons and a complete set of rings as this insures uniformity. Furnished without bushings, rings or pins.

PRICE $1.00.

Big Jobs **Pay Best**

NEW GREENERD No. 15 ARBOR PRESS

A Big Profit Making Equipment for Any Shop

Its pressure capacity is 10 tons with one man and 16 tons with two men. It will do any work, no matter how small, up to capacity. Equip your shop, so you can undertake any job. There is equal profit with small jobs; you gain work that otherwise would go elsewhere.

The Greenerd No. 15 Arbor Press, because of its utility, is the cheapest investment you can make. It will attract the BIG JOBS,—the jobs that pay best, and ensure against competition, for a small press necessarily limits your work and your profit. When you do not realize all the profits you help your competitor, and buying equipment is up to you. The New No. 15 Greenerd is especially designed for garage, repair shop and machine shop equipment and the price is right.

Greenerd Presses are built in sizes for all work. All details at request.

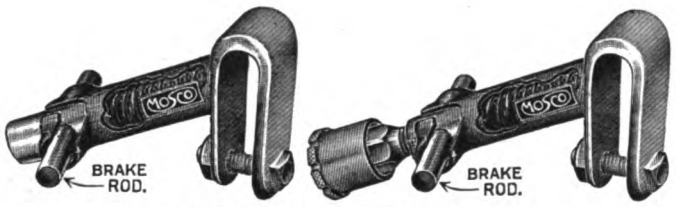
MOSCO FORD FITTINGS

Master Vibrators
Bow Clamps
Door Check Anti-Rattler
Number Plate Holder
Gasoline Gauge
Bemus Timer
Fan Belt Guides
Tire Pump, Engine Driven
Front Number Holder
Gasoline Economizers
Spring Leaf Oiler
Shock Absorber
Fogg Exhaust Horns
Brake Shoes
Adjustable Wheel Pullers
Brake Rod Guides
Muffler Cut-Outs
Radius Rod Anti-Rattler (2 Styles)
Steering Rod Anti-Rattler (2 Styles)



MOSCO BRAKE ROD GUIDE.

A pair of these little fittings will positively silence the objectionable shake and rattle of the Ford brake rod. They may be slipped over the brake rods without removing the rods from the car. Very easily applied by any user in five minutes' time. They have no cotter pins. Packed two in a carton.

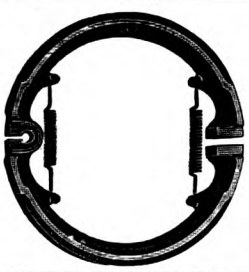
Price with Grease Cup, Bronze, $1.25 per pair. Semi-steel, $1.00 per pair. Size (in carton), 5½x2½x1½. Weight, 16 oz.

Price Without Grease Cup, Bronze, $1.00 per pair. Semi-steel, 80c per pair. Size (in carton), 5½x2½x1½. Weight, 15 oz.

MOSCO ANTI-RATTLING BALL SOCKET, NO. 1.

(Large Size)

For radius rods of Ford Cars. Made from high grade semi-steel. Is used for adjusting ends of radius rods, terminating in a ball socket at front of transmission case. They provide a quick and easy method of taking up lost motion at this joint and eliminate rattle. **Size (in carton), 3x3x1¾. Weight, 9 oz. Price, 70 Cents Each.**



MOSCO BRAKE SHOE.

Made in one piece of best quality gray iron casting and covered with asbestos lining. These shoes grip the drums much more securely than the plain iron shoes. They are positive money savers, as the lining may be replaced for only a few cents.

Packed two in carton. Size (in carton), 8x8x2¼. Weight, 4 lbs. Price, $1.50 per pair.

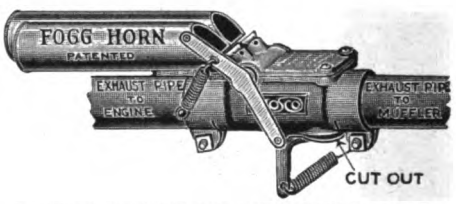
MOSCO

Anti-Rattling Ball Sockets for Radius Rods and Steering Rods of Ford Cars.

Equipped with Compression Grease Cups.

Size (in carton), 2½x2½x1¼. Weight, 6 oz.

Radius Rod Anti-Rattler, Price, $1. Steering Rod Anti-Rattler, Price, 75 Cents.



A NEW 1915 MODEL WITH CUT-OUT.

The new model is equipped with a cut-out in the body of the horn. In buying this model **you have two appliances in one:** an exhaust horn and a muffler cut-out. Furnished with two pedals—one of the locking type to hold open the cut-out when desired. Guaranteed for life of car.

Size (in carton), 12½x4x4¾. Weight, 3¼ lbs. Price, With Cut-Out, $5.00. Without Cut-Out, $4.50.

MOSCO SHOCK ABSORBER.

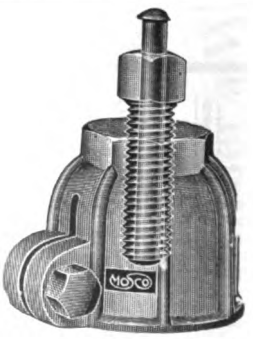
A Shock Absorber embodying all the good features while eliminating all the weak points of others. For resiliency, quick action and long life the **torsional spring** is best. The MOSCO is a **torsional spring.** Any strain to which it is submitted comes with the **rebound** of the metal, making it least apt to be affected by sudden jolts or jars.

Designed especially for the Ford Car, these Absorbers are so constructed that they do not interfere with any of the wheel or axle parts, nor with tire chains.

Front Pair, size (in carton), 4½x9x4½. Weight, 8 lbs. Rear Pair, size (in carton), 4½x7x4½. Weight, 7¾ lbs. Price, full set of four, $10.00. Price, set of two, $6.00.

MOSCO NO. 2.

Adjustable Wheel Puller for the Ford Car.



A new, exclusive feature of this model is the loose plunger extending through the center of the screw. This plunger affords a means of starting off a wheel which is stuck or "frozen" to the axle. A sharp blow with a hammer against the end of the plunger materially helps to free the wheel. **Size (in carton), 3½x3x2¾. Weight, 19 oz.**

Price, $1 Each.

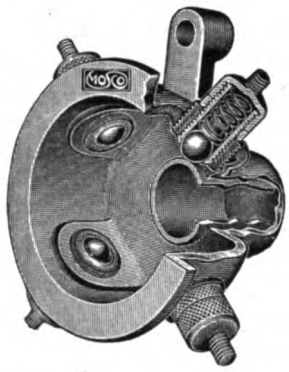
The New BEMUS TIMER

FORD CAR TYPE

BEMUS BALL CONTACT TIMER



Every practical man who knows the Ford car recognizes the fact that this short-stroke, high-speed engine requires a Timer capable of rapid, snappy action in the making of contacts and yet having durability sufficient for thousands of miles of running without loss of efficiency.

The Bemus is best for the Ford *because*

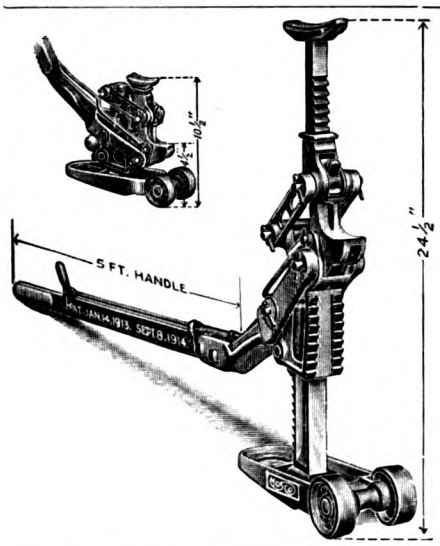
CONTACT is made by a hardened tool-steel brush engaging steel balls with short, glancing impacts, both the brush and the balls turning each time so that fresh contact surfaces are continually engaged.

MOUNTING is direct on the time shaft by means of an extension piece. This brings each of the balls equi-distant from the brush. Result—absolute precision of timing.

STARTING is facilitated in cold weather because these contacts do not hold a body of oil to prevent passage of current.

DURABILITY of unlimited extent is due to a construction which eliminates all wear of the insulation. The roller brush is reversible, and when worn on both sides may be replaced by the user, together with new contact balls at an expense of a few cents.

PRICE $2.25



"Excel" Garage Jack

A Heavy, Powerful Tool for Rapid and Easy Handling of Large or Small Cars.

The only Jack in the world suitable for the work of Garages, Service Stations, Repair Shops, Tire Agencies, etc. This Jack weighs fifty pounds, has five foot handle with enormous leverage, and will raise either end of the heaviest touring car four and one-half inches with a single stroke of the handle. Range 5 inches to 26 inches from the floor.

35 DOLLARS

BUYS A

GENUINE DYER WELDING and CARBON

STYLE D REMOVING OUTFIT COMPLETE WITH SUPPLIES

Made in large quantities in a well equipped plant by men associated with the welding business since its introduction.

Finished in full nickel with no details slighted. Ten welding tips included for handling steel as thin as four one-thousandths in thickness up to the heaviest casting in either steel or iron.

We have 1500 sets of apparatus in use working under all conditions and in all kinds of industries.

This is in no sense a Junior Outfit built to sell at a low figure without regard to its practical value, but the result of careful study of design and low manufacturing cost.

Our ideas of design have been widely copied which is in itself a flattering testimonial.

Charges for welding on a fair basis to the customer average $3.00 per hour or a production of $30.00 per 10 hour day. A welder will average 100' each Acetylene and Oxygen on general work in that period, and upon investigating the market price of these gases in your locality, you will find the remaining profit exceptionally large.

With this Outfit a bent gooseneck of the standard chassis can be straightened in 20 minutes, and we estimate that four such jobs will pay in gross profit the cost of this Outfit.

Front axles can be straightened on the car with it, and the proposition of straightening alone makes it a necessity which quick service to your customers demands.

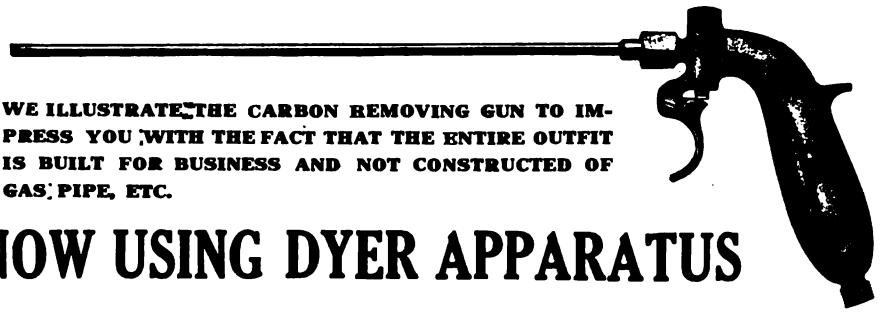
Loose rear axle housings can be brazed in 15 minutes without destroying brake linings, and for hot riveting and tightening loose rivets it is indispensable.

Ordinary gas, oil and gasoline heating Outfits usually sell for even more than the price of a DYER Outfit, and the latter furnishes 6300° of heat in a very local flame which is most essential in 99% of heat applications.

Worn parts can be built up and remachined.

An ear can be built on an aluminum manifold in 8 minutes.

Valves can be readily made by welding a disk on a steel stem so that the machining cost is very low.



WE ILLUSTRATE THE CARBON REMOVING GUN TO IMPRESS YOU WITH THE FACT THAT THE ENTIRE OUTFIT IS BUILT FOR BUSINESS AND NOT CONSTRUCTED OF GAS PIPE, ETC.

Industries NOW USING DYER APPARATUS

Automobile Manufacturers, Boiler Shops, Steel and Iron Foundries, Sugar Refineries, Textile Mills, Bridge Builders, Architectural Iron Workers, Steel Metal Workers, Paper Mills, Blacksmith Shops, Garages, Machine Tool Builders, Job Welding Shops, Jewelry Manufacturers, Silversmiths, Machine Shops.

MULTIBESTOS REG.U.S.PAT.OFF. PAT.APPD.FOR

Follow the White Foot Prints

The distinct superiority of Multibestos has been proved time and again, both by engineering tests and in the every-day service of thousands of car owners.

That it may be distinct in appearance as well as in quality, we mark it with "White Foot Prints."

Not only do the "White Foot Prints" protect the users of Multibestos, but they also afford a great convenience to the dealers who are handling it—for the marks are spaced exactly and can be used for measurement when cutting from stock to fill orders.

So we say to car owner and dealer alike:

Follow the white foot prints,

They lead to satisfaction in brake lining.

THE ACCESSORY -AND- GARAGE JOURNAL

Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. IV. PAWTUCKET, R. I., JANUARY, 1915. No. 9

NEW YORK GARAGEMEN WIN BIG FIGHT.

Defeat Proposed Separator Legislation and Cause Repeal of Act Creating Office of Fire Marshal—Fighting 50-Foot Garage Rule.

THE garagemen of New York State won a complete victory on the separator question, which they have been combatting for the past several months. Not only have they defeated the proposed legislation, but the office of New York state fire marshal has been abolished. Thomas J. Ahearn, fire marshal, who promulgated the long and complicated garage laws, has been relieved of his office by the action of the assembly, which repealed the law creating his office. This act of the assembly carries the indorsement of Governor Whitman, and when it reaches the senate next week it is prophesied that the same reception will be given to it.

The measure which brought about the abolishment of the office was introduced by Assemblyman Hinman, leader of the majority, and was passed by a vote of 93 to 38, the Republicans voting solid and carrying the Progressives with them. As Governor Whitman strongly urged the abolition of the department as unnecessary, there can be no doubt of its ultimate disposition in the senate. In a brief debate which caused the measure's passage, A. E. Smith, the Democratic leader, was the only man to speak in behalf of the fire marshal's office. He stated that more than 7000 inspections had been made under the state fire marshal which never had been made before, and that the department was saving life, limb and money. However, Assemblyman Hinman contended that the fire marshal's office represents "excess baggage", carried by the people without any adequate return.

The abolition of the office ends a successful fight which has been carried on for the past several months by R. H. Johnston of the White Company, New York City, who headed the Automobile Trade Association of New York State. Charles Thaddeus Terry was the attorney for the organization and Charles A. Stewart is the secretary. At the request of the association the rules, which applied to all cities in New York State with a population of 1,000,000 and over, were suspended indefinitely, pending an investigation and a proposal to redraft and make them feasible and fair.

The measure, which means so much to the garages of New York, as submitted by Assemblyman Hinman, was exceedingly short. It is quoted in full in the following:

AN ACT.

To repeal article 10-a of the insurance law, relating to the state fire marshal, and acts affecting the application of such article, to terminate the powers, duties and office of the state fire marshal and provide for the care and records of his office.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. Article 10-a of chapter 33 of the laws of 1909, entitled "An act in relation to insurance corporations, constituting chapter 28 of the consolidated laws", as added by chapter 451 of the laws of 1911 and amended by chapter 453 of the laws of 1912 and chapters 192, 204, 214, 303, 393, 405, 431, 432, 433, 434, 520 and 523 of the laws of 1913, and comprising sections 350 to 375 inclusive, and sections 377 to 379, inclusive, is hereby repealed and the office of state fire marshal and all offices and positions therein abolished. All property, books, papers, records and documents pertaining to the office, powers and duties of state fire marshal in the possession or control of such officer or his subordinates, shall be delivered on demand to the director of the state library and by him kept and preserved until otherwise provided by statute.

2. Section 2 of chapter 453 of the laws of 1912, entitled "An act to amend the insurance law, in relation to state fire marshal", is hereby repealed.

3. This act shall take effect immediately.

STRIKE AT 50-FOOT GARAGE LAW.

After Successful Separator Fight New York Dealers Seek to Eliminate Rule That Would Affect Many Garages.

After successfully defeating the proposed separator law for New York garages, the Automobile Dealers' Association, headed by R. H. Johnston of the White Company, New York City, sought to have the "50-foot garage law" repealed. At a hearing before the Board of Hazardous Trades, President Johnston and others of the association addressed the members and requested that the rule be repealed or made less drastic. The law states that no garage allowing the storage of any volatile inflammable oil shall be permitted within 50 feet of the nearest wall of a building occupied as a school, theatre, or other place of public amusement or assembly.

It was contended by President Johnston that a garage is less hazardous than many other supposedly "safe" buildings, and that were the rule to be rigidly enforced it would unjustly put many garage men out of business. Points made by the dealers at the hearing were summarized as follows:

1. Modern garages are fireproof.
2. Gasoline storage systems are fireproof.
3. Modern gasoline is less volatile than in the early days of the industry.
4. Gasoline is less explosive than commonly believed.
5. Many supposedly "safe" materials are just as combustible as gasoline.
6. Wood takes fire at a lower temperature than gasoline.
7. Garages contain less combustible material than many buildings classed as "safe".
8. There are employees in a garage 24 hours a day, lessening the fire hazard.
9. A garage should be a preferred not a condemned, neighbor.
10. The regulation does not lessen the possibility of panic.
11. The regulation acts as a deterrent to garage erecting; business men will not build if a "movie" man can open up next door and force them out of business.

In the conclusion of a very lengthy report, President Johnston says: "It is my earnest hope, as it is my expectation, that this board will forthwith repeal the regulation complained of. The fact that the board has granted us this hearing shows that it is willing to consider the merits of the regulation, and I trust that the facts presented have been sufficient to convince them that the regulation should not be allowed to remain on the statute books for another day".

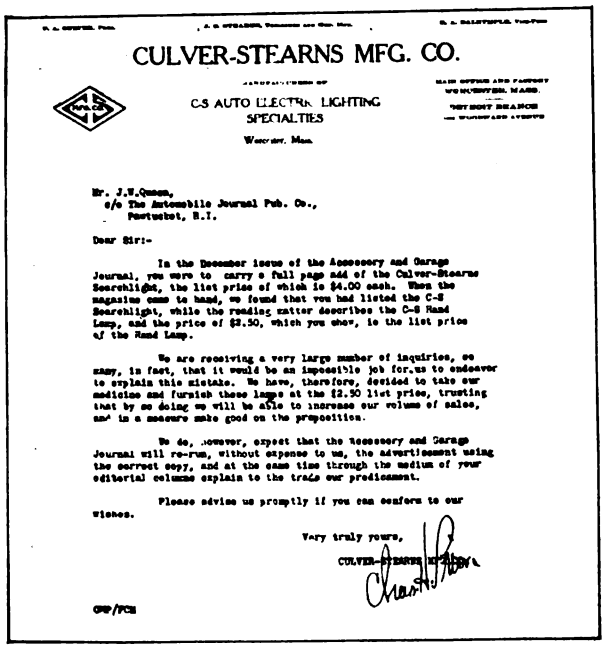
A $4 SEARCHLIGHT FOR $2.50.

Culver-Stearns Mfg. Co. Accepts Price Made by Advertising Error.

To have a price reduction of 37½ per cent. thrust upon him is a shock of monumental proportion to any manufacturer, especially when it is an exclusive product and is conservatively priced, yet this is the experience of the Culver-Stearns Manufacturing Company, maker of electrical specialties at Worcester, Mass., through a blunder in the service department of The Automobile Journal Publishing Company.

In the December issue of this magazine a page advertisement appeared which described a powerful small searchlight with a swivelling bracket that is designed to be clamped on the windshield of a car in front of the driver, that may be operated at will, focussed in any direction or at any angle, and will project a spot light with which signs and numbers may be read at 200 feet. But the price quoted was that of a hand searchlight, and this was $2.50, instead of the $4 at which the lamp described was priced.

The error was discovered through inquiries received by the firm. These referred to the $2.50 searchlight that



CULVER-STEARNS MFG. CO.

C-S AUTO ELECTRIC LIGHTING SPECIALTIES

Worcester, Mass.

Mr. J.W.Queen,
c/o The Automobile Journal Pub. Co.,
Pawtucket, R.I.

Dear Sir:-

In the December issue of the Accessory and Garage Journal, you were to carry a full page ad of the Culver-Stearns Searchlight, the list price of which is $4.00 each. When the magazine came to hand, we found that you had listed the C-S Searchlight, while the reading matter describes the C-S Hand Lamp, and the price of $2.50, which you show, is the list price of the Hand Lamp.

We are receiving a very large number of inquiries, so many, in fact, that it would be an impossible job for us to endeavor to explain this mistake. We have, therefore, decided to take our medicine and furnish these lamps at the $2.50 list price, trusting that by so doing we will be able to increase our volume of sales, and in a measure make good on the proposition.

We do, however, expect that the Accessory and Garage Journal will re-run, without expense to us, the advertisement using the correct copy, and at the same time through the medium of your editorial columns explain to the trade our predicament.

Please advise us promptly if you can conform to our wishes.

Very truly yours,

CULVER-STEARNS MFG. CO.

CSM/FCS

was advertised. Had the company received a few responses to its advertisement explanation might have served to keep the original price, but they were so numerous that this was impossible, and the company decided to sell the searchlight for the price made by the error, as the included letter and the advertisement appearing in this issue will evidence.

While the incident was decidedly unfortunate, it demonstrated three facts that are especially significant. First, that advertising in the Accessory and Garage Journal is productive of remarkable results; second, that the Culver-Stearns Manufacturing Company stands behind its business announcements without reservation or qualification and did not seek to explain what on the face, at least, is a probability of small profit from what promised to be extremely profitable; and third, that those who buy the C-S searchlight will secure the largest value for the cost they ever obtained. The facts stated are established by the facsimile letter, which is made part of this statement, which is, in all fairness, due to the Culver-Stearns Manufacturing Company and to the trade

SPARK PLUG MEN MEET.

Association of Manufacturers Adjourn Annual Meeting in New York City to Jan. 27.

The Association of Spark Plug Manufacturers, New York City, held its annual meeting in that city recently and, according to J. W. Fischer, secretary, the pressure of outside business on the part of several active members made it impossible to carry out the programme outlined. Consequently an adjournment was taken until Jan. 27, at Chicago, Ill., when the annual business for the year will be transacted.

The association has several important matters under consideration and final action will be taken on the stand as to syndicate catalogues, jobbers' private brand plugs and the classification of legitimate jobbers will be attempted.

REVISES PRICE LIST.

Fisk Rubber Company Notifies Trade of New Schedule to Become Effective Jan. 1.

Notices have been sent out by the Fisk Rubber Company to the trade announcing a new price list which became effective Jan. 1. The revision is due to the addition of a new tire, one that the company believes will be a popular seller—the Fisk non-skid red top. The tire will be made in all of the principal sizes. The prices on tread casings remain about the same, and on white non-skid casings and gray tubes they are reduced. On the new Fisk red top casings and on red tubes the list is about the same as on the white non-skid and gray tubes heretofore.

WILLYS SELLS INTERESTS.

Disposes of Holdings in Gramm Motor Truck Company and the Garford Motor Truck Company.

John N. Willys, president of the Willys-Overland Company, Toledo, O., maker of the well known line of Overland pleasure and commercial cars, has withdrawn from the Gramm Motor Truck Company, Lima, O., and the Garford Motor Truck Company, Elyria, O. It is also stated that the Willys interests in the agencies of these companies at New York, Boston and Philadelphia have been disposed of. Mr. Willys gained control of the Gramm Company several years ago by purchasing over $500,000 of the $750,000 common stock of the company.

POPE PLANT SOLD.

Pratt & Whitney Company Purchases Main Plant and Will Produce Machinery for Chinese Government.

The main plant of the Pope Manufacturing Company, Hartford, Conn., has been sold to the Pratt & Whitney Company of that city. A certified check of $300,000 was turned over to the receiver. The court passed on the sale and the deed was immediately transferred. The new plant, which will employ about 600 men, will be utilized to complete the Pratt & Whitney Company's contract with the Chinese government for armory and arsenal machinery.

MANUFACTURER LICENSED.

Motor Specialties Company Obtains Right to Manufacture Combination Anti-Rattler and Grease Cup Device.

Announcement is made by the Danver Accessory Company, Pawtucket, R. I., to the effect that the Motor Specialties Company, Waltham, Mass., maker of Mosco specialties, has been granted the right to manufacture the combination anti-rattler and grease cup which was patented Nov. 10, 1914, by the Danver Accessory Company. The device is a ball socket anti-rattler having a screw adjustment and a grease cup.

AUSTIN WINS SUIT.

United States Court Rules Cadillac Motor Car Company Infringed on Two-Speed Axle.

According to advices received from Grand Rapids, Mich., Judge C. W. Sessions of the United States court has ruled that the Cadillac Motor Car Company of Detroit infringed on the patent of Walter S. Austin and has issued an injunction restraining the defendant from using the Austin two-speed axle. The decision also provides for an accounting. The present model of the Cadillac does not contain the two-speed axle.

REORGANIZE COMPANY.

Stockholders of Speedwell Motor Car Company Vote to Continue and New Capital Is Sought.

The stockholders of the Speedwell Motor Car Company, Dayton, O., recently held a meeting and voted to reorganize the company. A plan of procedure is being prepared and additional capital will be interested.

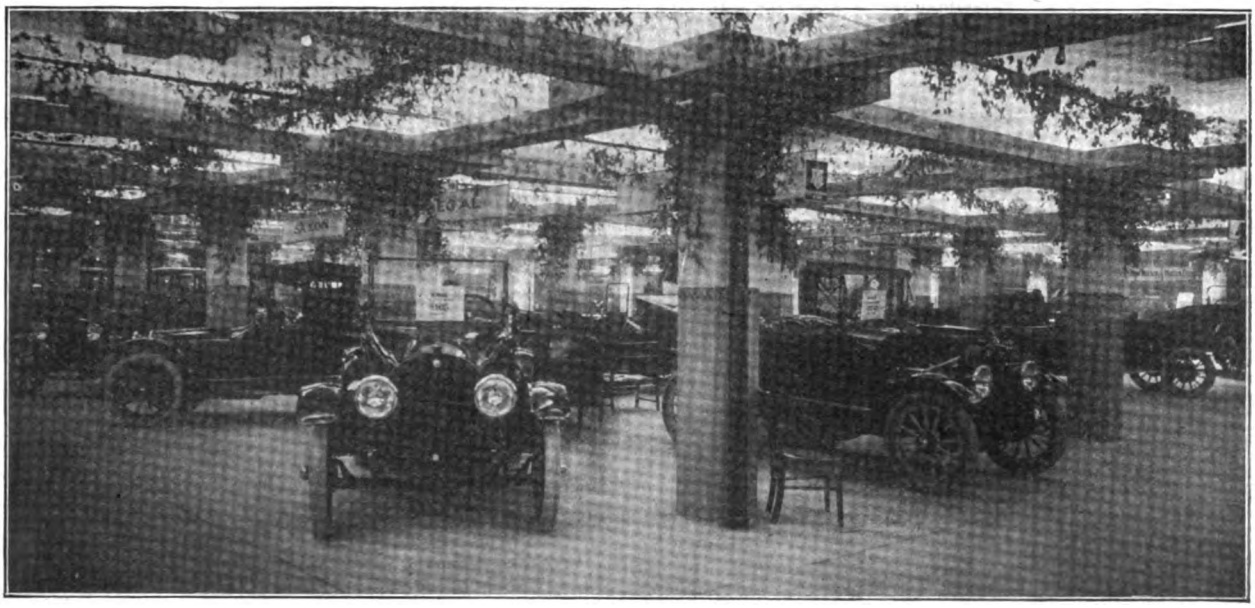
ACCESSORY DISPLAYS A FEATURE OF SHOWS.

ALL things being equal, the present show season may be considered the most successful for automobile and accessory dealers in every part of the country. Following in quick succession the automobile shows in New York, Chicago, Detroit, Philadelphia, Cleveland and a score of other cities, prove the above statement in every respect. Record crowds and sales have been the crowning feature of the shows held to date, and the dealers in the cities where plans are being perfected for these exhibits in the near future predict a similar result. The Boston show, from all indications, will be no exception to the above rule, and New England dealers anticipate a rich harvest.

Features of Detroit Exhibit.

On the day the Chicago automobile show opened, the Detroit exhibition closed. From the dealers' standpoint the latter event was one of the most successful held to date. This show, which was the 14th annual event, included automobiles, accessories and trucks and, despite the extreme bad weather that prevailed throughout the week, the attendance broke all previous records. One of the features of the show was the motor car museum, where all early models of the various manufacturers were exhibtied. The Storms electric passenger cars, made by the Storms Electric Car Company, Detroit, Mich., were seen for the first time at any show. The J. C. Wilson Company exhibited a new worm driven model of the 1½-ton type. The Dominion truck was shown for the first time at any show, the vehicle being made by the New Dominion Motors, Ltd., Walkerville, Ont., and by the Dominion Motor Truck Company, which has just been organized in Detroit. A full line of automobile and accessory exhibits were shown and many novelties were to be seen at the booths.



A General View of the Pleasure Car Section of the Detroit, Mich., Automobile Show, Which Was Held Jan. 16-23.

Chicago Display in Progress.

At the Chicago show, now in progress, there are 141 manufacturers of equipment exhibiting. Of these there are 47 that did not have space at the New York event, and the regular rule of having more accessory exhibitors at the New York show is reversed this year. The Chicago affair has always been known as a dealers' show and, from the reports of the first day or two, this year will prove it more so than ever. Over 18,000 invitations were mailed to agents and garage men throughout the Middle West, and it would seem that the dealers will furnish the most prominent part of the week's display.

Cleveland's $2,000,000 Exhibits.

After a week of successful business the Cleveland automobile show was brought to a most successful close on Jan. 23. Motor cars and accessories were featured to the value of approximately $2,000,000, and these covered a space of some 2½ acres. This year's show was the largest held so far, and the Wigmore coliseum was crowded to capacity during every night of the week. A large volume of business was transacted, and dealers were reported as being satisfied in every particular.

Philadelphia Show a Success.

The exceptionally large attendance, the volume of business done and the general excellence of the exhibits were the features of the 14th annual show held in Philadelphia, Penn., Jan. 9-16. The exhibition occupied 40,000 square feet of floor space, and every exhibitor went on record as being gratified with the financial results accruing from the week's event. The box office receipts attained a total never before approached in that city, and the doubling of the price on Thursday evening had no effect on the enormous attendance.

Milwaukee's Financial Results.

With an attendance of 42,000 at the 1915 automobile show, compared with 36,000 at the 1914 event, the seventh annual exhibition in Milwaukee, Wis., goes down on record as being the most successful ever held. On Jan. 12, "state day", it was estimated that 12,400 people attended, and several important meetings of state associations of dealers and owners were held.

Syracuse Details Arranged.

The seventh annual show of the Syracuse, N. Y., Automobile Dealers' Association will be held at the state armory Feb. 23-27. The exhibit, as in former years, will include pleasure cars, accessories and trucks, all of which will be confined to one floor. The decorative scheme represents a Japanese temple and a rose garden for Infantry hall and Cavalry hall, respectively.

Boston Event Comes in March.

As in former years, the Boston, Mass., show will follow the majority of the big events. To be held March 6-13 at the Mechanics' building, this display will maintain the same standard that has characterized it in previous years, and if the predictions of its manager, Chester I. Campbell, are verified, the dealers will reap a harvest that will greatly exceed that of 1914. In the coming issue of the Accessory and Garage Journal the full details of the Boston show will be given, and it will be replete with information for the dealer and garage man.

Maine Show Is Undecided.

Unless suitable accommodations are found in the near future, the Portland, Me., automobile show will be abandoned for 1915. Last year this event was held in the City hall, but it was shown that this building was inadequate to house such an exhibition. For the present season it was proposed to hold the automobile show in the Auditorium, but it is evident that this structure will not be completed in season, and unless quarters are soon secured it is probable the matter will be postponed until 1916.

Hartford One-Floor Exhibit.

The motto of the Hartford Automobile Dealers Association, Hartford, Conn., for the automobile show, Feb. 6-13, is "bigger, better and busier". It will be held in the state armory and every effort is being made to have something that the dealers will remember as being the most successful financial undertaking of the year. A purely American effect will be given, the color scheme being red, white and blue.

DETAILS OF NEW EIGHT-CYLINDER CARS.

WHEN the Cadillac Motor Car Company, Detroit, Mich., announced the first eight-cylinder car to be built in America but a few months back, the opinion of the dealers varied considerably as to the ultimate popularity of the eight. However, all doubts as to the success of this type have been laid to rest, as the exhibition of the companies making eights were crowded at the recent automobile shows, and from the sales made by dealers handling these lines it was proven that it was not all mere curiosity. Since the advent of the Cadillac eight last fall eight other car manufacturers have joined the ranks of the eight-cylinder model, and five motor concerns are turning out this type of engine in the United States. The cars are: The Abbott, Cadillac, Cole, Detroiter, King, Marion, Regal, Remington and Ross. These range in price from $1250 to $1975. The concerns manufacturing motors only are: Buda, Davis, Herschell-Spillman, Northway and Perkins.

The latest company to come forth with an eight is the Cole Motor Car Company, Indianapolis, Ind. This concern held back its announcement until the opening of the Chicago automobile show, and the public was given an extra surprise on that occasion. The Cole eight motor, a Northway, is cast in blocks of four at 90 degrees to each other, has a bore of 3⅛ inches and a stroke of 4½, giving it a horsepower rating, S. A. E. formula, of 39.22. The three-passenger roadster and the seven-passenger touring both sell for $1785. Other detailed specifications are given in the accompanying table.

Another car to make its debut at the Chicago show was the Ross eight, made by the Ross & Young Machine Company, Detroit, Mich., a concern that has been making parts for car manufacturers for many years. The feature of the car, aside from its motor, is the price, $1350 for the five-passenger touring, the only body offered at the present time. Both the motor and the starting and lighting systems of the Ross car are made in the company's plant. The drive is from the propeller shaft and Timken axles, and is taken through the springs on the Hotchkiss principle. The body is of the streamline boat shape, and a clean line is given from the radiator to the rear of the car.

Elsewhere in this issue the full description of the new Remington Greyhound eight is given. This car, made by the Remington Motor Company, 2 Columbus circle, New York City, sells for $1495, and is made in a two, four or six-passenger body. Likewise, an excellent idea may be gathered of the eight by referring to the specifications printed herewith, and the illustration of the motor printed elsewhere in this issue.

The Regal Motor Car Company, Detroit, Mich., is producing an eight for $1250, this having a V type motor, with a bore of 2⅞ inches and a stroke of 4½, a 112-inch wheelbase and full equipment. The eight cylinders are cast in two blocks of four each, the cylinders being of the L head type with the valves on the inside. Externally the motor is made particularly clean by means of a removable horizontal plate connecting the two sets of cylinder heads. The plate can be removed for valve adjustment, and the cylinder heads are also removable, one casting covering each block of four cylinders. The electric equipment includes a Rushmore generator on the forward left side of the motor, with the cranking motor connecting to the flywheel.

Another surprise was occasioned when the Abbott eight was announced recently. This car, now made by the Consolidated Motor Car Company, Detroit, Mich., is in the form of a three-passenger roadster or five-passenger touring car, each selling for $1685. Lighting and starting is by either Remy or Disco, this being optional, and a Zenith carburetor and the Atwater Kent ignition are employed. The motor, L head, water cooled, is cast en bloc, having a bore of 3⅛ inches and a stroke of 4½, giving it a rating of 31.25, according to the S. A. E. formula. Other details are printed herewith.

Selling under $1300, the Detroiter eight, the product of the Briggs-Detroiter Company, Detroit, Mich., is offered in the form of a five-passenger touring model. The motor is of the L head type, cast en bloc, with a bore of 2¾ and a stroke of 4½, giving an S. A. E. rating of 24.25 horsepower. It has a Zenith two-jet carburetor, and a distributor is employed for the ignition.

The Marion Motor Car Company, Indianapolis, Ind., announces a $1500 eight, having a V shaped motor with a bore of 3⅛ inches and a stroke of 4½. This model is made either in the form of a Bobcat roadster or a five-passenger touring car, the wheelbase of which is 115 inches.

WORKING OVERTIME.

Plant of Oakes Company, Indianapolis, Ind., Operating to Capacity to Supply Horns, Etc.

The Oakes Company, Indianapolis, Ind., reports that its plant is being operated day and night to fill orders for the Beartone horn and other specialties produced by this concern. The large volume of this business is stated to be with foreign countries.

Digitized by Google

UNUSUAL SERVICE BY MAXWELL COMPANY.

Maintains Large Plant at Newcastle, Ind., for Supplying Parts for Cars Made by United States Motor Company—Orders Promptly Filled.

DEALERS and garage men throughout the country will welcome the step taken by the Maxwell Motor Sales Corporation, Newcastle, Ind., in issuing the "Dealers' Master Parts Price List". The Maxwell Motor Company, Detroit, Mich., is devoting its whole plant at Newcastle to rendering service to the dealers who are interested in Maxwell-Briscoe, Stoddard-Dayton. Brush, Everitt, Columbia and Courier automobiles and Alden Sampson trucks.

Small Parts Bins and Checking Service Stock at the Maxwell Newcastle Plant.

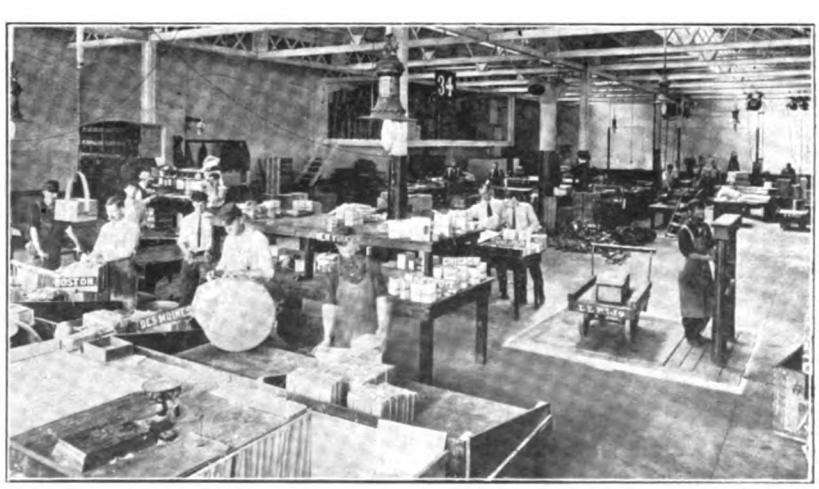
In the 416-page book, issued by the Maxwell Motor Sales Corporation, the prices of parts, numbers and names of same, instructions on ordering, etc., for the 164 different models are given. It is divided into sections, and each section covers all the models of one make of car. For example, the Stoddard-Dayton section is printed on yellow stock, the Brush models on pink, and the Columbia list is made up of buff. This makes it easy to find the sections and, as the first page of each section is indexed, it is a simple matter to locate any particular model or part.

By addressing the Maxwell Motor Sales Corporation, Newcastle, Ind., any dealer or garage man will be furnished with a copy gratis, and this contains a full price list, together with discounts.

One who has not visited Newcastle recently has no conception of the service that is being rendered to the dealers in connection with the cars named above. When it is recalled that, at the time the Maxwell Motor Company purchased this plant from the receivers of the United States Motor Company, and President Flanders had decided that it would be devoted to giving service on cars made by the United States Motor Company, there were on hand in the neighborhood of 3000 unfilled parts orders and over 2000 unanswered communications, some idea of the gigantic task that confronted the new concern may be had. Within three months after organization of the plant as a service headquarters, all of these orders and communications had been cared for and the plan, which has proven so effective, put into operation.

At the present time this big three-story factory is flooded with sunshine, the hundreds of windows giving daylight conditions to the small army of contented men and women who are taking care of between 600 and 800 orders daily. It is a law of the factory that every order must be on its way within 24 hours after its arrival in Newcastle. J. E. Burns, manager of the plant, sees that every order, whether small or large, receives the same prompt attention, and the records show that for months the average daily shortage has never exceeded 10 orders.

When it is out of the question to fill an order within 48 hours, the customer is so advsied by a special letter and an approximate date of shipment is given. To make this 24-hour service possible, it is necessary that the company carry in stock quantities of 34,950 different kinds of parts continuously. This stock inventories close to the $2,000,000 mark. In addition to this the company carries a $250,000 parts inventory in the San Francisco warehouse for service to customers in the Far West. Storage for this immense stock requires the entire floor space in the three-story building, which comprises the greatest portion of the Maxwell Newcastle plant. The building is 60 feet wide by 722 feet long and contains 49,000 part bins, literally miles of specially constructed racks for fenders, radiators, wheels, etc. Thousands of square feet of floor space is required for bulky material not binned or racked, such as bod-

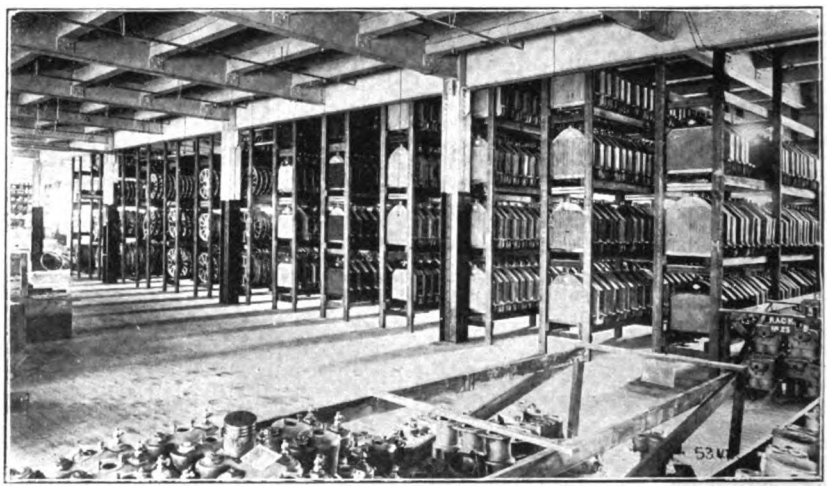


A Corner of the Shipping Room Where Parts for the Maxwell-Briscoe, Stoddard-Dayton, Brush, Etc., Are Shipped.

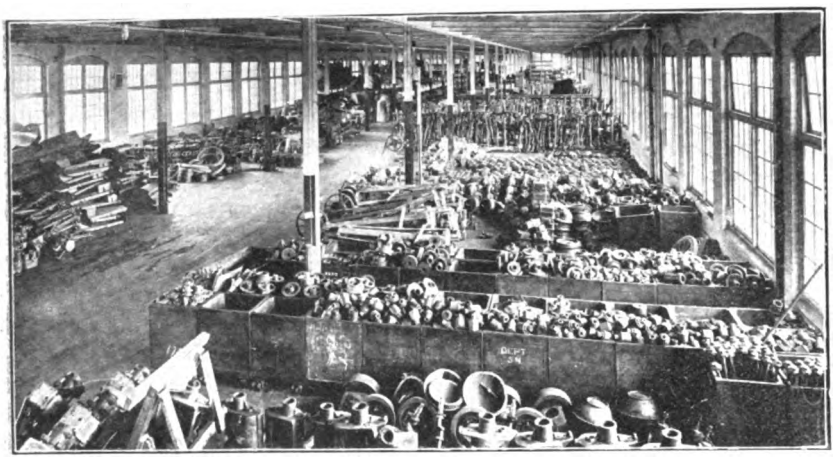
Digitized by Google

ies, frames and motors.

Manager Burns has thoroughly standardized every department and stands ready to give the visitor any information desired. He states that there are 34 stenographers employed to handle the correspondence and billing, that Newcastle is practically the centre of population and that its freight and express service is unsurpassed. Newcastle has four first-class incoming mail deliveries and the same number outgoing. Two incoming and four outgoing parcel post deliveries are made in an eight-hour day, and in addition to this there are eight incoming and 12 outgoing express deliveries. These are supplemented by hourly service to steam and electric depots by a fleet of factory trucks. The Adams, Wells-Fargo and American companies look after the express shipments, while the freight is cared for by two electric lines and the Lake Erie & Western, the Big Four and the Pennsylvania railroads.



Showing Rows of Radiators, Wheels, Fenders and Other Parts in the Storage Warehouse of the Maxwell Motor Sales Corporation.

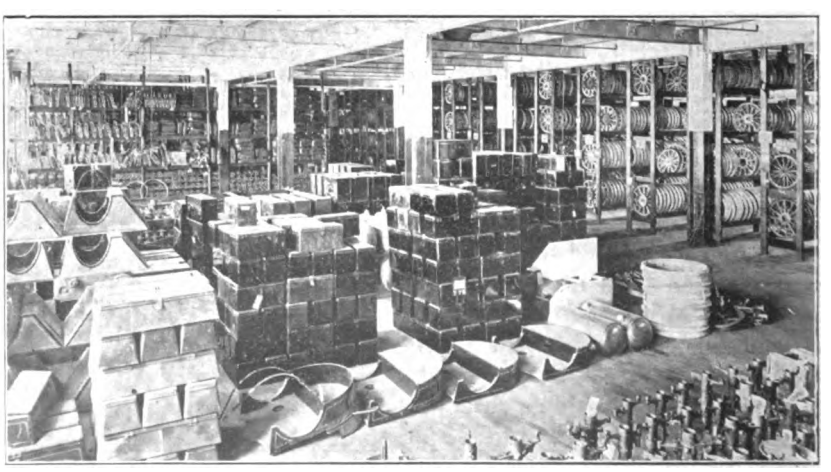


Method of Taking Care of the Heavy Materials That Are Not Binned or Racked.

During the fiscal year ending Aug. 1, 1914, the Maxwell Motor Sales Corporation shipped 2,500,000 pounds, or 1250 tons, of material by express; 6,000,000 pounds, 3000 tons, by freight, and 110,000 pounds, 55 tons, by parcel post. That owners and dealers were quick to take advantage of the service offered by the Maxwell Newcastle plant is proven by the fact that 246,000 individual orders were handled during the fiscal year.

From this brief outline, the work being done by the Maxwell Company at Newcastle may be well appreciated by dealers. It is the object and aim of the company to give all dealers and garage men the benefit of the best service in the world. It was President Flanders' idea that to give service to the owners of cars made by the United States Motor Company they ought to be able to purchase such parts as they might require from time to time from their nearest dealer or garage. In consequence it was decided to allow the regular trade discount to any dealer or garage man regardless of their location or the make of the cars they handled.

This master price list will help a dealer immeasurably, containing as it does prices, numbers and descriptions of so many cars in such compact form. This book is not apt to be lost as are the small individual price lists. The company will gladly send one of these dealers' master price lists to any dealer or garage man upon request, and the company thinks that it will help swell the profits of any man who sends for it. An idea of the labor, time and cost necessary to publish this book is apparent from the fact that it required six months to compile and print it.



The Body Parts, Wheels, Hoods, Windshields, Etc., That Are Kept on Hand by the Hundreds at the Maxwell Company's Newcastle Factory.

WHEELMEN HONOR CAMPBELL.

Well Known Show Manager Guest of Honor at Third Annual Reunion of Rhode Island Wheelmen.

At the third annual reunion of the Rhode Island Wheelmen, which was, when in its prime, one of the most prominent bicycle clubs in the country, a reception was tendered to Chester I. Campbell, mayor of Quincy, Mass. The event took place at the Crown hotel, Providence, R. I., and the widely known show manager was given an unusually cordial reception by his personal friends.

Chester I. Campbell, Mayor of Quincy, Mass., Guest of Honor at the Third Annual Reunion of the R. I. Wheelmen at Providence, R. I.

The idea of extending personal congratulations to Mayor Campbell on his recent election to that office, originated with a number of his Providence friends, many of whom were associated with him in the days when the bicycle industry flourished.

Many prominent state and city officials were in attendance, and a number of these were members of the Rhode Island Wheelmen when the club house was located on Benefit street in Providence. One of many interesting features of the evening was Mr. Campbell's speech in which he recalled the old bicycling days and those identified with them. Reference was made to the race meets held under the auspices of the club and many interesting anecdotes were related of the members of the club, many of whom were present. The fourth annual reunion of the old bicycle riders will be in charge of George F. Phillips, chairman of the committee.

BOSTON DEALERS' BANQUET.

New Organization Holds Successful Meeting and Price Maintenance and Fair Dealing Are Urged.

The first banquet of the Boston Automobile Accessory Dealers' Association, held at the American house, Jan. 25, was instrumental in bringing together 300 prominent men in the industry from all over eastern Massachusetts. E. A. Gilmore, distributor of the Lewis and Allen cars in New England, acted as toastmaster for the occasion. Mr. Gilmore is the ex-president of the Bay State Automobile Association and, in introducing him, George H. Brophy, president of the new organization, called attention to the fact that men in the accessory lines in other parts of Massachusetts were following the Boston dealers' plan, and that soon it would be possible to have the organization amalgamated so that there would eventually be not only a Boston association, but a Massachusetts one, and finally a New England organization.

John N. Cole, president of the Industrial Development Commission, represented Mayor Curley of Boston and gave a very interesting talk on organization and impressed upon those present the value of co-operation among business men. E. H. Gaunt of the Babson Statistical Organization, Wellesley, Mass., addressed the members and guests, taking the subject, "Co-Operative Competition", and by means of figures cited many illustrations of the success experienced in other lines of business through the co-operation of dealers in the same line of business. Frank W. Whitcher of New York, a member of the maintenance of retail prices committee of the United States Chamber of Commerce, discussed the Stevens bill in all its details and gave some interesting information relative to the recent decisions of the United States courts where they said that a manufacturer could not insist upon a dealer selling at the maker's retail price. He gave the members much advice on what they could do under the present laws, and urged a broad selling policy.

L. C. Rockhill of the sales department of the Goodyear Tire and Rubber Company, Akron, O., came from that city to address the meeting. His topic was "Price Cutting and Organization in the West". Mr. Rockhill pointed out the beneficial results of organizations such as the Boston one, and compared it to some of those in the West with which he was familiar. His speech brought out forcibly the advantages to the dealer who plays fair because the big companies now in the accessory field making articles will give such dealers every opportunity to succeed.

Chester I. Campbell, mayor of Quincy, Mass., and secretary of the Boston Automobile Dealers' Association, gave a short talk on matters pertaining to the motor industry of the city and congratulated the members upon the success which has already crowned the efforts of the association in bringing about a strong state-wide organization of automobile accessory dealers. Mr. Campbell reviewed the good work done during the past year by the association in the way of preventing bad automobile legislation from being enacted, not only in Massachusetts, but also at Washington, and urged the accessory dealers to get together in a like manner.

The banquet ended with cheers for all the speakers and the officers of the association, following the adoption of resolutions favoring the Stevens bill, copies of the resolve being ordered sent to all the Massachusetts senators and representatives, and likewise to President Wilson.

NEW M. A. M. MEMBERS.

List of Motor and Accessory Manufacturers Increased by Addition of Seven New Concerns.

The board of directors of the Motor and Accessory Manufacturers has elected the following concerns to membership: Bearings Company of America, Lancaster, Penn.; Bock Bearing Company, Toledo, O.; Dreadnaught Tire and Rubber Company, Baltimore, Md.; Golde Patent Manufacturing Company, New York City; L. P. Halladay Company, Streator, Ill.; Robert H. Hassler, Indianapolis, Ind.; Sloan & Chace Manufacturing Company, Newark, N. J.

ELECT VANDERVOORT PRESIDENT.

Chosen to Head Society of Automobile Engineers at the Annual Meeting Held in New York City.

At the annual meeting of the Society of Automobile Engineers, held in New York City, Jan. 5-7, W. H. VanDervoort, president of the Moline Automobile Company, Moline, Ill., was elected president for 1915. The following officers were also elected: First vice president, E. H. Hutton; second vice president, J. A. Anglada; treasurer, A. B. Cummer. C. B. Rose, Velie Motor Vehicle Company, Moline, Ill.; John Wilkinson, H. H. Franklin Manufacturing Company, Syracuse, N. Y.; William P. Kennedy and F. M. Germane, Standard Roller Bearing Company, Philadelphia, Penn., were elected councillors.

The report of Secretary Coker F. Clarkson showed an excess of $5505.26 of receipts over expenditures as of Dec. 1, 1914, and that, since the previous meeting, 32 members, 23 associate members, six junior members, one affiliate member, five affiliate representatives and 11 student members had been enrolled in the association.

Henry M. Leland, the retiring president and President VanDervoort made addresses, the former dealing with the work of the association and the future of automobile engineering, and the latter emphasizing the problems of motor vehicle engineers and stating that designing, although seemingly well established, had only begun.

W. H. VanDervoort, President of the S. A. E. for 1915.

One of the features of interest was the presentation of a handsome silver piece to Henry Souther, chairman of the standards committee, to whom is due in no small measure the progress made by the society in standardization, who, because of the pressure of other duties, had retired from the chairmanship after four years' service. Mr. Souther was also honored by election to life membership in the society.

THE ACCESSORY AND GARAGE JOURNAL

VOL. IV. JANUARY, 1915. NO. 9.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

ABREAST OF THE TIMES.

The progressive dealer, garage man or repair man is one who is familiar with the details and prices of the more recently announced products of the accessory, part, equipment and supply manufacturer. There is no need for any garage man to profess ignorance of a device when his opinion is asked of its merits by an interested customer. To excuse one's lack of knowledge by speaking lightly of the article is poor business practise. The maintaining of a garage involves certain responsibilities, among which is that of keeping abreast of the times. The manufacturer announces his new product through the trade publication, and at the slight cost of a cent for a postal card, the garage man may obtain free for the asking complete details of the new device, also prices.

STEADILY GROWING.

The Accessory and Garage Journal is the only automobile trade publication to make a gain in paid advertising during the past year. The increase in space sold for 11 months in 1914 over entire volume of business of 1913 was 92 per cent. The guaranteed distribution of copies has steadily increased and for any month of the present year the minimum edition will be 20,000. This is very good evidence that in the Accessory and Garage Journal the trade finds what it wants. A trade publication must live on its merits or die on its defects. The Accessory and Garage Journal is a trade publication, has no owners' clientele, and as such is devoted to the interests of the trade. Its editorial and advertising pages keep the reader well informed concerning new material, developments and improvements which have to do with the prosperity of the jobber, dealer, garage man and repair man. The remarkable gain in paid advertising, 92 per cent., is indicative of how carefully the Accessory and Garage Journal is read by the trade. The growth in circulation is just as pronounced as the increase in advertising.

THE FILING OF DATA.

The garage occupies a unique position in the automobile industry in that the demands made upon the proprietor are extremely variable. Today he may be asked to estimate the cost of installing an electric lighting and motor starting system in an old car. Tomorrow another customer may desire figures as to the time and expense involved in replacing a planetary transmission with a sliding gear set. There is no limit as to what is expected of the garage man or repair man; in fact, he is expected to possess the knowledge of a mechanical engineer and a designer. Much of the desired information, including prices, can be promptly secured by maintaining a complete filing system of the data supplied by the manufacturers, which are free for the asking. By filing the catalogues, circulars, data sheets, etc., under their respective heads, a ready reference bureau is afforded, one that will prove invaluable.

THE SILENT SALESMAN.

It is pleasing to note that a large number of garages are making a profitable use of their window space. An attractive window display is a silent salesman and, when the goods are shown to an advantage, increased sales result. With the manufacturer co-operating with the trade by supplying, free, attractive stands, etc., there is no reason why the small garage cannot achieve its share of success. The window display serves another useful purpose. It affords an opportunity to dispose of stock for which there has been little if any demand. By displaying the material at bargain prices many garages have turned into profit what was apparently a loss. Seasonable window displays promote business.

PLANS COMPLETE FOR CHICAGO SHOW.

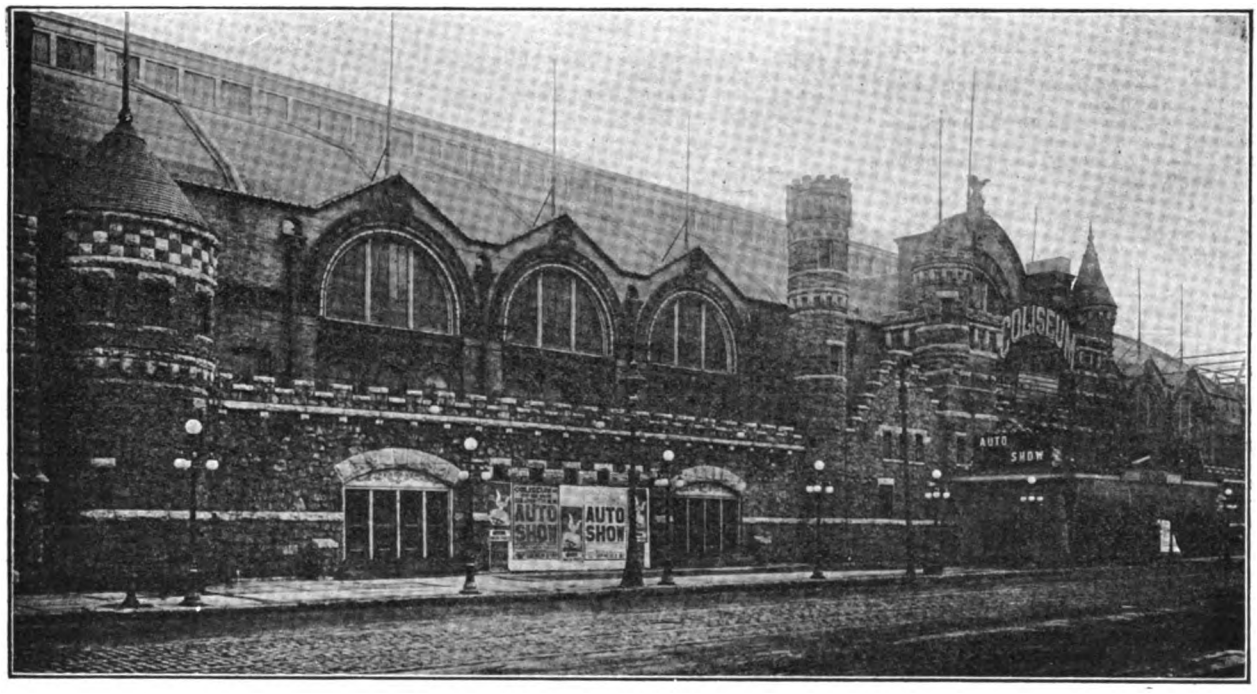
Two Buildings Will Be Given Over to the Exhibits and Decorations Will Be Conservative—List of Exhibitors and Spaces.

ADHERING to its conservative policy as to decorations, the management of the 15th annual Chicago automobile show, Jan. 23-30, will utilize the theme of an old English garden for displaying to an advantage the motor vehicles, accessories, parts, supplies and equipment to be shown in the Coliseum and First Regiment Armory.

The scheme of imparting a rustic atmosphere will be heightened by the use of many tall trees, and pines, bay and box trees and brick walls surmounted with flower pots of rose bushes, quaint iron railings, etc., will complete the effect. Much of the foliage and pines to be utilized will be shipped from Maine and no expense is to be spared to make the decorative display the most artistic ever attempted by the management.

Insofar as the number of exhibitors is concerned, the 15th annual Chicago show promises to eclipse all previous displays. Many manufacturers who exhibited at New York will be at Chicago, where a large number of new cars and accessories will be publicly displayed for the first time.

It is expected that a number of innovations will be introduced, and it is possible that one or more new motors will be seen as was the case last year. Last year there were several new accessories shown for the first time. The display of accessories, supplies and equipment always has been one of the features of the Chicago event and it is expected that this year will be no exception to the rule.



Exterior View of the Coliseum, Chicago, Where 15th Annual Motor Vehicle Show Will Be Held.

Indications presage a larger show than in 1914, and as in the past, the Chicago event will retain rather more of the old time national show atmosphere than is true of the New York exhibition. By this is meant that many dealers of the Middle West and Southwest still make it a practise to visit the Chicago display for the purpose of securing new contracts.

Chicago compares favorably with Boston in the way of actual sales, and while the Boston event is not termed national, manufacturers concede that it is the big retail show of the year. The disposition of the management of the Chicago event is to make it a general meeting place for the manufacturer and the dealer, although, of course, there will be no lack of opportunity to do business directly with the prospective owner.

So great has been the demand for space that it has been found necessary to utilize two additional buildings. These are immediately south of the Coliseum annex, and one of the structures was a part of the show proper last year. These buildings are offered by Edwin Greer & Co. to those who cannot obtain space in the main show.

The event will be under the auspices of the Automobile Chamber of Commerce, as was the New York display. The management is directly in charge of Samuel A. Miles, who has so successfully managed the Chicago displays in the past.

The list of exhibitors and spaces assigned them by the Automobile Chamber of Commerce are as follows:

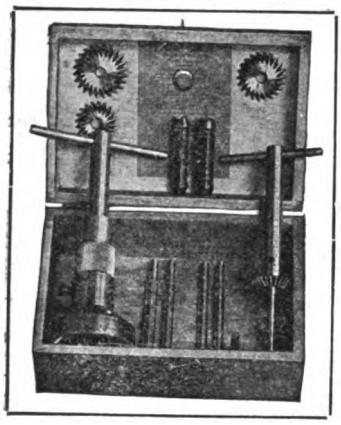
FOSNACHT VALVE RESEATER.

Restores Worn Valves and Their Seats Quickly and Accurately, Effecting Economy.

H. G. Paro, suite 718, Michigan Boulevard building, 30 North Michigan avenue, Chicago, Ill., has an exceptional agent's proposition on the Fosnacht valve reseater, shown in an accompanying illustration. This reseater presents a number of practical features, among which is that the tool can be utilized to cut new seats as well as to restore the faces of the valves.



Fosnacht Valve Reseater Outfit.

One of the qualities of the design emphasized is that it will do accurate work and in very fast time, thereby effecting a saving when worn or pitted valves are to be reseated or cut. The equipment is sufficient to handle all types of motors and every tool is guaranteed.

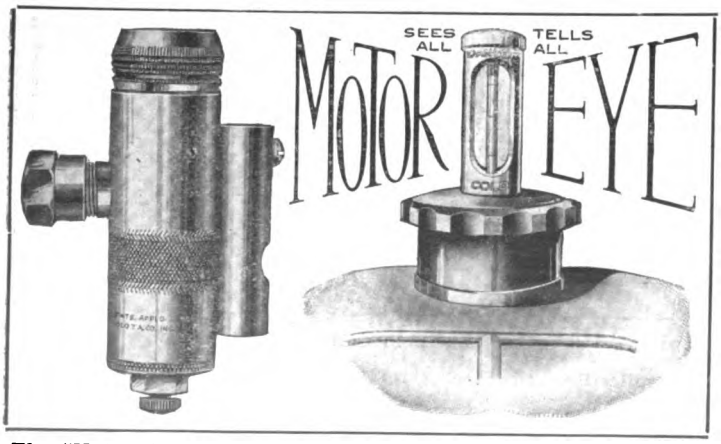
The Kraemer spring valve releaser is another practical tool manufactured by H. G. Paro. It has an adjustable jaw, adapting it to any motor. The agent's proposition on both of these tools is interesting, and dealers, garage men and repair men should investigate the details.

THE "MOTOR EYE".

A Radiator Cap Device Indicating Temperature of Cooling Fluid.

Among the new accessories announced recently is the "Motor Eye", which is being marketed by W. Lewis Mack, general distributor, 24 West Jackson boulevard, Chicago, Ill. It is a practical and inexpensive device for indicating to the operator of a motor vehicle the conditions existing under the hood; that is, the "Motor Eye" registers the temperature of the cooling fluid.

It is attached to the filler cap of the radiator by drilling a 7/16-inch hole and dropping the stem of the device through the opening. The indicator is locked in position by a nut, which is run up on the stem and tightened.



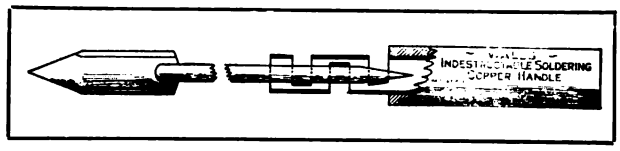
The "Motor Eye", a Device for Recording Temperature of Cooling Fluid, and the Improved Polo Tire Alarm.

The registration of the temperature of the water is obtained by the use of a mercury charged metallic conductor rod, which is in direct contact with the fluid as it enters the radiator. The "Motor Eye" is calibrated and provides readings easily discernible from the driver's seat, even in the dark. The device warns the operator of a motor vehicle against too high temperatures as well as too low. It retails for $2.50, a price that will be very attractive to the motorist, and the discounts provide for a wide margin of profit. Correspondence is solicited.

W. Lewis Mack is also marketing the improved Polo tire alarm, a device which informs the driver of a car in motion when the pressure in any tire falls to the minimum safety point. The model No. 15 is an automatic pressure gauge that is attached to the valve stem when a tube is fitted to a casing. The Polo tire alarm remains in position until the tube is changed. The tire can be inflated or use made of the gauge without removing the alarm. If the service of the signal feature be not desired, it can be dispensed with. The Polo tire alarm is a good selling proposition and the trade is invited to write for details and discounts.

WALLS' SOLDERING HANDLE.

T. P. Walls Tool and Supply Company, 83 Walker street, New York City, is marketing Walls' indestructible soldering copper handle shown herewith. The maker



Walls' Soldering Copper Handle.

states that no matter how hot the soldering iron becomes the handle will remain cool. The handle is made of pressed steel, and a groove locks the shank of the copper, so that the handle and copper become as one.

ESTABLISH DISTRIBUTION CENTRES.

New Departure Manufacturing Company Has Progressive Plan for Benefit of Garage Men.

In order to render better service to garage and repair men, who in turn can have more adequate facilities for their customers, the New Departure Manufacturing Company, Bristol, Conn., maker of the widely advertised New Departure ball bearings, has established distribution centres in all parts of the country. At these stations a complete stock of single-row, Radax types and all other products of the company is carried. These bearings are interchangeable with other standard makes, and a large number of automobile manufacturers throughout the country have adopted New Departure as standard equipment. Garage and repair shops can have orders filled promptly at any of these stations, an arrangement insuring efficient service to the customer. A letter or post card addressed to the company's Bridgeport office will bring full details of the cooperative plan to dealers, garage men, etc.

NEW EISEMANN MAGNETO.

The Eisemann Magneto Company, 32 33rd street, Brooklyn, N. Y., has brought out a new true high-tension magneto, which is dust and water proof. The advantages of the new instrument are clearly described and illustrated in the pamphlet issued by the company. The data will be forwarded on request.

ACCESSORIES, SUPPLIES AND FITTINGS.

NEW ERA MASTER VIBRATOR.

Is Very Compact and Contact Points Are of Durable Alloy.

The New Era Spring & Specialty Company, 870 Woodward avenue, Detroit, Mich., is marketing the New

Era master vibrator, which is noticeable for compactness, its dimensions being two by two by five inches. The weight is two pounds. One of the qualities of the coil emphasized is the durability of the material used for the contact points, the maker stating that the alloy is harder than platinum, and that they are indestructible. The coil has a hinged cover and the switch lever is of the conventional kick type. It sells for $7.

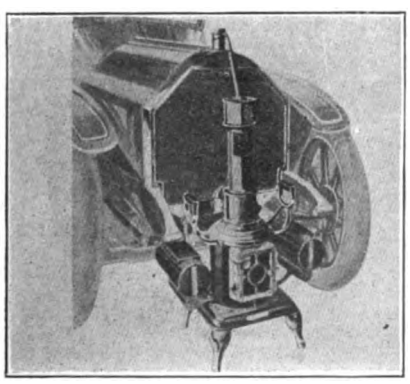
NEVEROUT HEATER.

A Device That Circulates Hot Water Through Motor and Heats Garage.

The Rose Manufacturing Company, 910 Arch street, Philadelphia, Penn., is manufacturing a new form of the Neverout heater, which differs from a previous model in that it is designed to heat the garage, as well as to prevent freezing of the water in the cooling system of the motor vehicle.

Hot water is circulated through the cooling system of the motor by the heater, entering at the top of the radiator, and after circulating through the system, passes out through the drainage petcock, thence to the heater by means of a tube. As long as heat is applied the water is circulated.

The heater burns kerosene, has a capacity of two gallons, and it is stated that the supply is sufficient for 48 hours. Two fuel tanks are included, both have gauges, and either may be used. A blue flame is obtained, providing intense heat, and the blaze is surrounded by a safety screen. A special draft system will prevent smoking or accumulations of carbon. The equipment includes a tube for hooking into the radiator filler opening, as shown in the accompanying illustration.

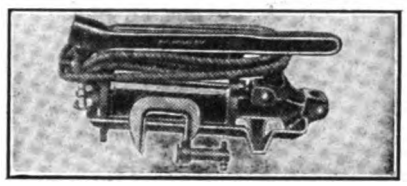


YANKEE TIRE PUMP.

Folds into a Small Package When Not in Service.

The Yankee folding tire pump is produced by the Apex Manufacturing Company, 1410 West 59th street, Chicago, Ill. It is designed to be clamped on the running board of the car when its services are required, and the maker states that it can be quickly placed in the operating position. One of the desirable qualities of the Apex is that it can be folded into a very small package.

When in an operable position, a leverage of seven to one is obtained by a folding lever, which may be used without the operator stooping. The cylinder displacement of the pump is said to be twice that of the ordinary hand pump and that it is

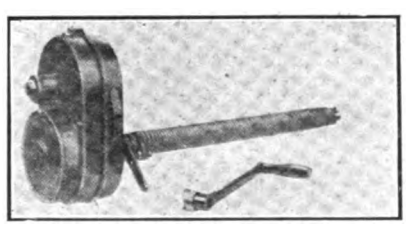


six times as efficient. Suitable length of hose is included with each pump. Without the gauge the pump retails for $5.

OVER-TURN MOTOR STARTER.

A Mechanical Type Designed Especially for the Model T Ford Car.

The Overholt Company, Galesburg, Ill., is marketing the Over-Turn motor starter for the model T Ford car. It is of the mechanical type in that the crankshaft of the engine is revolved by the application of the energy of a coil type of spring, which is released when wound by a trigger or lever on the steering column. The spring automatically rewinds after spinning the crankshaft, and the maker states that the device affords easy starting in cold weather, as the crankshaft of the motor is rotated at



a high rate of spin and for a large number of turns. The starter is attached to the front of the car, and a starting handle is supplied for auxiliary service, such as testing the compression of the motor. The Over-Turn starter lists at $45.

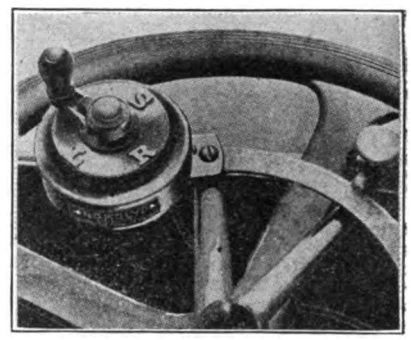
MOTOR STARTERS.

That there is a demand for a practical, efficient device for starting motors not equipped with priming cocks is evidenced by the number offered the motorist. While the electric motor starter practically overcomes starting troubles, there are hundreds of owners who cannot afford the equipment. There is a good field for a moderately priced device that will solve starting problems.

NOKOLYD, A REAR SIGNAL.

Is Controlled by Lever by the Driver and Displays Warning Words.

A novel rear signal that is operated by a small controller conveniently placed on the steering wheel, is the



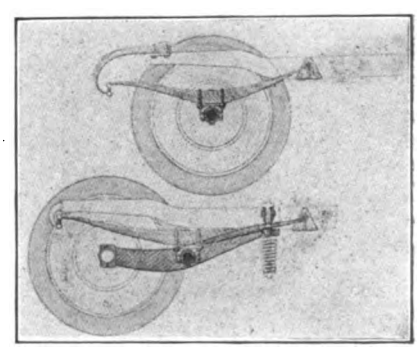
Nokolyd, manufactured by the Nokolyd Signal Company, 40 West 18th street, New York City. The signal proper is attached to a rear fender, where it is plainly visible from a car approaching in the same direction. The signal shows the words "Stop", "Right" and "Left", and these are illuminated at night. The Nokolyd is electrically operated, and the lenses are of different colors, that for "Stop" being red. The letters are white. The signal is as efficient in the day time. It retails for $60.

K. T. LEVER SPRINGS.

New Form of Suspension Prevents Side Sway and Absorbs Shocks.

The K. T. lever springs, marketed by the K. T. Lever Spring Company, 332 West 70th street, New York City, are designed to eliminate road shocks, prevent side sway and to relieve the dead weight on the rear axle. They operate on the lever principle, and the maker states that they permit the wheels of the car to follow every inequality of the road and at the same time transmit but little of the wheel movement to the body of the vehicle.

The lever principle is applied by utilizing a sub-frame, which is attached to the rear axle, and terminates in a fulcrum, where it is suspended from the centre of the main frame of the chassis. The springs are attached to this lever between the fulcrum and the wheels in such manner that side sway, as when turning corners, is eliminated, the maker claims. It is also stated that the lever action of the K. T. spring increases traction, reduces skidding to a minimum and prevents spring breakage. An accompanying illustration shows the K. T. lever springs attached to a machine; also a side view of ordinary springs. Details and prices will be supplied upon request.

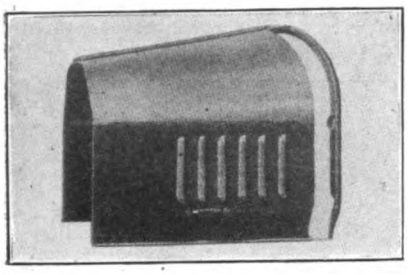


Digitized by Google

SUPERIOR FORD HOOD.

Affords Streamline Effect and Provides for Ventilation.

Motorists who desire to improve the appearance of their Ford cars will be interested in the Superior stream-



line hood brought out by the Superior Lamp Manufacturing Company, 136 West 52nd street New York City. It is of 16-gauge pressed steel, and one of its desirable qualities is the provision made for ventilation, six gills being provided on each side. These spaces permit the heated air to escape and promote the cooling of the motor.

A special hood rest is included, it replacing the old member, and the regular hood hooks or retainers are utilized with the new hood. The Superior tapers from the top of the dash to the radiator, and on either side. It is finished in baked enamel. Price will be supplied upon request.

TRINITY BELL SIGNAL.

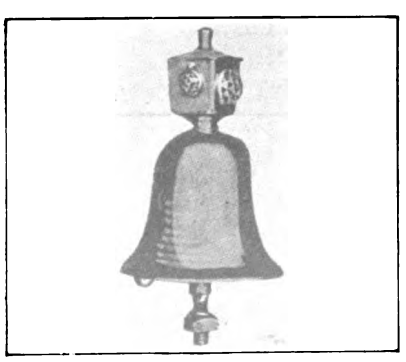
Is Mounted on Radiator Cap and Is Operated by Electricity.

The Electrical Manufacturing Company, 5108 Calumet avenue, Chicago, Ill., maker of electrical specialties for motor vehicles, is producing the Trinity bell, a novel and attractive signal. When in service it is located on the radiator cap, to which it is secured by a lock nut and washer.

The Trinity bell is operated by electricity, a push button, located as desired, cutting in the current from the battery. It is stated that the bell produces a beautiful, clear tone, sufficiently loud to serve all purposes as a warning signal.

One of the novel features of the design is an electric lamp mounted on the top of the bell in which are four lenses. These are red glass, which is standard, but any cardinal color will be supplied. All lenses are demountable and a spring is employed to prevent the tungsten bulb from vibrating loose, as well as to lock the top in place. The last-named member is secured with slots, a patented arrangement. The contact for the light is made automatically. The contact points are of platinum and are adjustable, but set or other screws are not employed.

The standard is cast in one piece, insuring stability, and both the bell and its top are nickel plated, al-



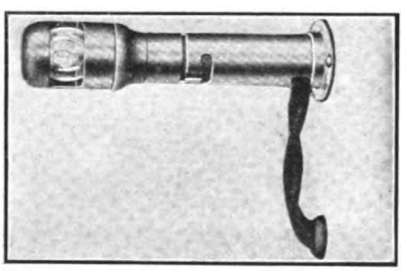
though brass finish is supplied. Four styles are manufactured. That illustrated is the type C, which is six by six inches, and is designed for the limousine. Special designs are produced, all of which are guaranteed for a number of years. The type C, that illustrated, retails for $12.

DE-LITE COMBINATION LAMP.

Provides a Dash and Inspection Light, Easily Operated.

The Culver-Stearns Manufacturing Company, Worcester, Mass., is marketing the De-Lite combination dash lamp and trouble finder. It provides a dash light when fitted, as shown in the illustration, and when its use as an inspection lamp is desired it is easily and quickly detached by unlocking a bayonet catch.

The bulb end of the device is equipped with a removable cap, and ample length of high-grade flexible cord accompanies each light. One of the desirable qualities of the design,

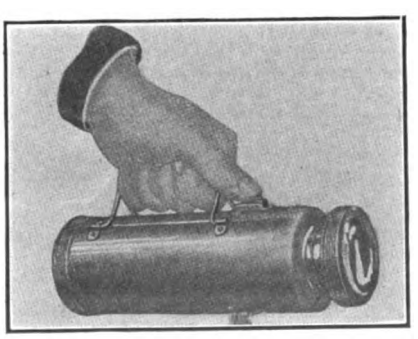


which is very compact and nicely finished, is the ease with which the light may be extinguished. The De-Lite lamp can be economically operated on two dry cells. The lamp employed is a three-volt, one-candle-power, and is protected by a cap which is displaced easily and quickly. De-Light equipment retails for $3. It is sold under a broad guarantee. The discounts are liberal.

BEERS ELECTRIC LAMP.

Is Constructed to Utilize a Dry Cell for Current Supply.

The Beers Sales Company, Bridgeport, Conn., is marketing the Beers



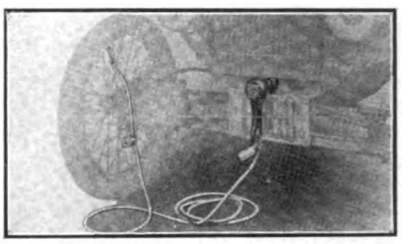
lamp, which is slightly larger than the ordinary dry cell that is utilized to supply current for lighting. The case or container is constructed of seamless brass, polished or nickeled, or pressed steel, with black rubber finish.

The dry cell is installed by unscrewing the end cap of the case, and the contact switch is conveniently located under the thumb, as noted in accompanying illustration. As the handle folds down, the light may be easily stored. The maker states that the lamp is very economical of current, that the light is efficient, and that the low cost of a dry cell makes for economical upkeep. Being very compact the lamp can be easily carried in the tool box.

DELAUNTY POWER TIRE PUMP.

Differs from Usual Practise in That It Replaces Crank.

The Home Light Company, 2108 Dayton street, Chicago, Ill., is manufacturing the DeLaunty power tire



pump and starting crank combined, which is not only a radical departure from tire pumps, but presents many interesting features. It is especially designed for the used motor vehicle and will appeal to those owners on whose machines the installation of an engine driven tire pump is not easily made.

As may be noted by the accompanying illustration, the pump replaces the starting crank and the former is connected to the tire by the usual line of hose. The pump proper is contained in the starting crank and comprises a piston, connecting rod and crankshaft. The last-named member is actuated by the crankshaft of the engine and these components are connected by means of a simple clutch arrangement.

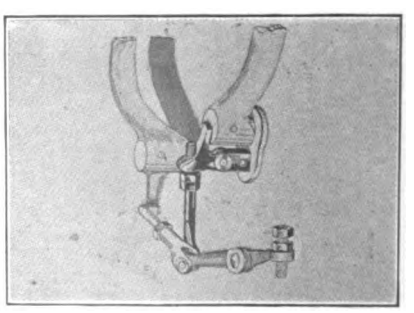
To utilize the pump, a round knurled nut is moved toward the motor, and the nut actuates a floating shaft, also brings into engagement the clutch member. The hose is 12 feet in length and is provided with suitable connections, also a pressure gauge.

The maker states that the tire pump and crank can be installed in less than one hour, and that no drilling or machining is necessary. The pump is stated to have been subjected to severe tests before being placed upon the market, and is sold with a liberal guarantee. The design for the model T Ford car sells for $10.

FORD CLUTCH THROW-OUT.

Device That Disengages Power When Brake Pedal Is Fully Depressed.

The Perkins-Campbell Company, Cincinnati, O., maker of Ford specialties, is marketing the Ford clutch throw-out, a device with which the driver can disengage the clutch by operating the brake pedal. This reduces the effort by 50 per cent., as it is not necessary to operate both the clutch and brake pedals. The clutch throw-out is also of service when utilizing the reverse pedal and will be appreciated by beginners, who generally stall the motor. It affords perfect control when operating the car either forward or backward. The device can be attached in a few minutes, and retails for $1.

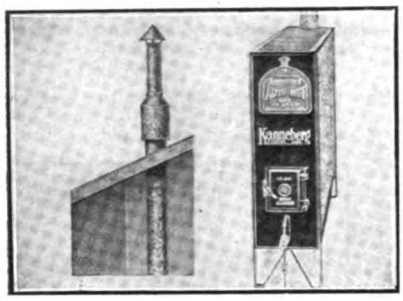


Digitized by Google

AUTO-HOT GARAGE HEATER.

Burns Illuminating Gas as a Fuel and Has a Safety Device.

The Auto-Hot garage heater, the product of the Kanneberg Roofing and Ceiling Company, Canton, O., is



designed for service in garages not equipped with steam or other forms of heating and where illuminating gas is available as a fuel. The Auto-Hot takes its air supply from the outside of the building, thereby preventing the possibility of gasoline vapor entering the heater.

The maker states that any inflammable gas is prevented from reaching the flame by a safety gauze wire device and that the burner, etc., may be examined at any time. The Auto-Hot is compact, being 36 inches long and 10 wide. It is stated that it is economical of fuel.

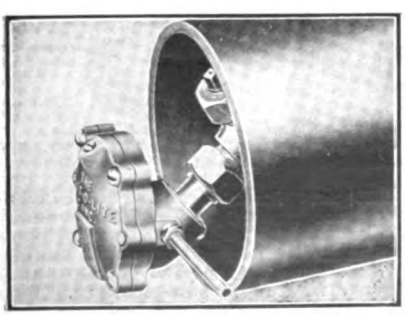
AUTOMATIC REDUCING VALVE.

Prest-O-Lite Device Controls Pressure and Makes for Economy.

The Prest-O-Lite Company, Inc., Indianapolis, Ind., is manufacturing an improved form of automatic reducing valve for its well known gas tanks, it being produced in two forms, style A for motor vehicles and B for motorcycles.

The reducing valve is a practical and useful device in that, after attachment to the tank, the gas may be turned on without regard to the pressure; that is, the key may be rotated a part of or several turns without affecting the flame. The last-named always remains the same irrespective of the pressure, and it is obvious that considerable time is saved when lighting the lamps, as there is no adjustment of the supply to be made.

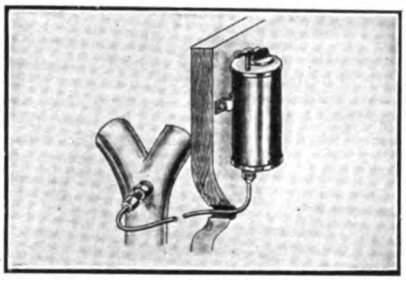
The automatic reducing valve is very compact and is attached to the tank in a few minutes in practically the same manner as the regular union supplied with each tank. It automatically reduces the pressure to that required for an efficient flame and, after the device is adjusted, will require no further attention. Its use not only saves walking from the tank to the lamps to note if the blaze is of the proper height, but it prevents the cracking of mirrors and waste of gas. The maker states that it will soon pay for itself in the saving of gas ordinarily wasted. It is inexpensive and can be obtained at any of the numerous service stations maintained by the company.



INDIANA PRIMING DEVICE.

Supplies Fuel to the Intake Manifold, Aiding Starting.

The Indiana primer is marketed by the Engineering Equipment Company, 1201 State Life building, Indianapolis, Ind. It consists of a small tank holding about half a pint of gasoline or other volatile fuel, and the container is connected to the intake manifold by a tube of small diameter. The fuel is injected into the intake pipe, and a needle valve is provided to adjust the flow to obtain a rich mixture for starting and to shut off the supply after the motor has become warm. The maker states that it can be fitted in 15 minutes. A design is made for installing under



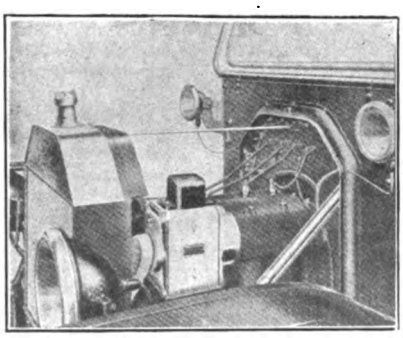
the hood and this model is controlled from the seat. The dash model retails for $2.50.

STARTER FOR FORD CARS.

Gray & Davis, Inc., Perfect Electric System for Starting and Lighting.

Gray & Davis, Inc., Boston, maker of electric lighting and motor starting systems, is marketing a motor starter and lighting dynamo for the model T Ford car. The equipment includes all necessary fittings, but the lamps are listed as extra.

The energy of the motor starter is applied to the crankshaft of the engine by a silent chain, which is housed and operates in oil. A six-volt battery and box, dash indicator, regulator cut-out, switches, wiring, etc., are included. The price of the Gray & Davis system ready for installation is $75. This does not include lamps or transportation charges.

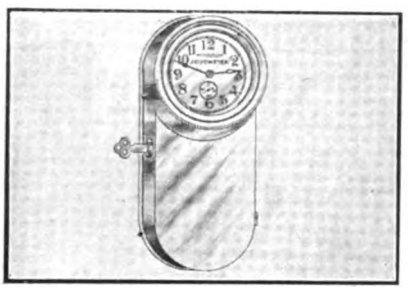


Ed. Note—Owing to a lack of space in this issue a number of new accessories, supplies and equipment displayed at the New York show are not described and illustrated in this number. This explanation is made for the benefit of those manufacturers who supplied data and illustrations. Use of the material, however, will be made in an early number of The Accessory and Garage Journal.

HOGGSON JOYOMETER.

Records on Tape When Car Is Used and the Time Employed.

The Hoggson Joyometer is the invention of S. H. Hoggson, 108 Fulton avenue, New York City. It is an



ingenious device which is practically a combined watchman's clock and an employee's register, in that it affords means whereby the owner of a car is provided with a record of the starting and stopping of his machine, also the length of time it was operated.

The case contains an eight-day clock movement, which is connected to a device that prints the divisions of time on a strip of paper tape. Connected with the printing mechanism is a delicately balanced horizontal pendulum, which operates a steel perforating needle, the last-named member making holes in the tape when the motor is started and the car operated. The tape is accessible only to the owner, and not only is a record maintained of the use of the vehicle, but the time is indicated as well.

ELECTRIC PRIMER.

Vaporizes Fuel Inside of Intake Pipe by Heat of Electricity.

The Ideal Brass Works, 10th and Canal streets, Indianapolis, Ind., maker of motor vehicle specialties, has brought out an electric primer for making easy the starting of gasoline motors in cold weather. The equipment comprises a small fuel reservoir mounted on the driver's side of the dash, a control member, the electric vaporizer and four dry cells.

The gasoline is forced to the vaporizer, which is located in the intake manifold, and the fuel is heated by the current, which raises the temperature of the fluid and completely vaporizes it. The heat of the plug also assists in starting in that the walls of the intake manifold are warmed. The maker states that in the time it takes the driver to leave the seat to crank the motor, a sufficient quantity of vapor is obtained to make starting easy on the coldest of days. The equipment is made for gravity and pressure feed fuel systems and it sells for $5 complete.

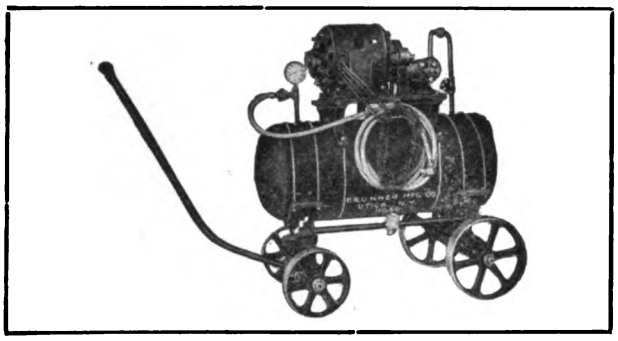
BRUNNER AIR COMPRESSORS.

Average Cost of Repairs and Replacements Show Expense of Two Cents a Year for Over Six Years.

The cost of repairs, and replacements of parts, are factors to be considered in the installation of equipment in the garage, especially when profit is not derived from



Brunner No. 52 Portable Air Compressor.

the service of the apparatus. This is practically true of the air compressor which is maintained by the majority of garages for the convenience of their customers. While it is true that a compressor is a good investment in that it keeps and attracts trade, it is equally true that its cost of upkeep is an important factor.

The Brunner Manufacturing Company, Utica, N. Y., which produces air compressors in all sizes, either stationary or portable, and to meet all conditions and requirements, states that its equipment can be maintained at the average cost of two cents a year for repairs and replacements. This fact was established by an audit of the books of the company, and the record covered all Brunner machines in service, motors and accessories for six years and seven months. Brunner workmanship and material, as well as design, are responsible for this excellent showing. Garages and repair shops contemplating the installation of air compressors, will do well to investigate the line produced by the Brunner Manufacturing Company. Details of the product will be supplied upon request.

NEW CATALOGUE.

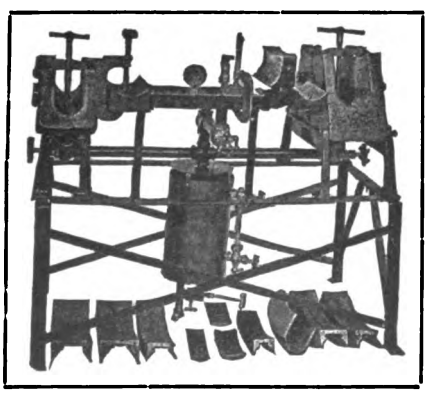
National Motor Supply Company Issues 1915 Jobbers' Edition Containing Details of Its Line.

The 1915 jobbers' edition or catalogue of the National Motor Supply Company, Cleveland, O., is being mailed the trade. It contains descriptions and illustrations of many new motor vehicle specialties produced by this concern. Copies will be supplied the trade upon request.

INCREASING PROFITS.

Vanderpool Company Describes, in New Booklet, Possibilities for Garage and Service Station.

By providing the customer with prompt service the garage and service station increases its clientele, and when the garage is equipped to repair tires and inner tubes the profits can be considerably increased. Not only is the garage fitted for repair work of this kind able to take care of its customers, but a considerable revenue is possible from transient trade, as well as from nearby motorists who have a private garage.



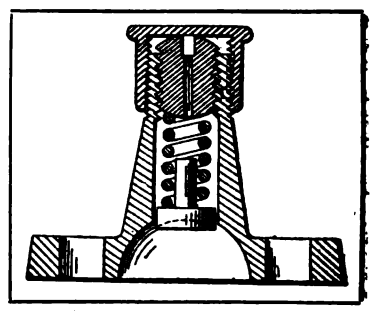
Vanderpool Vulcanizing Equipment.

The selection of the proper tire and tube vulcanizing equipment requires careful consideration. Some garages need only a small capacity equipment, while others can utilize an outfit capable of simultaneously repairing a number of tires or tubes. The Vanderpool Company, Springfield, O., has specialized in vulcanizing outfits for a number of years and has made a careful study of the requirements of the garage and service station, and will co-operate with those interested in the possibilities of tire and tube repair work. The company will analyze conditions and recommend that equipment which will be profitable to operate. This service is free for the asking, as is also the large illustrated catalogue.

LATEST DACO PRICE LIST.

Danver Accessory Company Announces New and Attractive Discounts on Specialties for the Ford Car.

The Danver Accessory Company, 18 Broadway, Pawtucket, R. I., maker of the well known line of Daco specialties for the Ford car, including the Danver automatic oiler, combination anti-rattler and grease cup, brake rod supports, etc., has revised its discounts for 1915 and is now offering its products to dealers at attractive prices. The cut in prices has been made possible by increased manufacturing facilities and the purchasing of raw material in large quantities. The demand for the Daco specialties is also a factor in the revision of the prices.



The Daco Anti-Rattler.

The company calls attention to the fact that the Daco combination anti-rattler and grease cup is the only patented ball socket anti-rattler made to fit Ford cars, that has a screw adjustment in the claims. This device is made in two sizes, and an accompanying illustration shows the construction and the screw adjustment feature. The new price list above referred to will be supplied the trade upon request.

ECONOMY IN LUBRICATION.

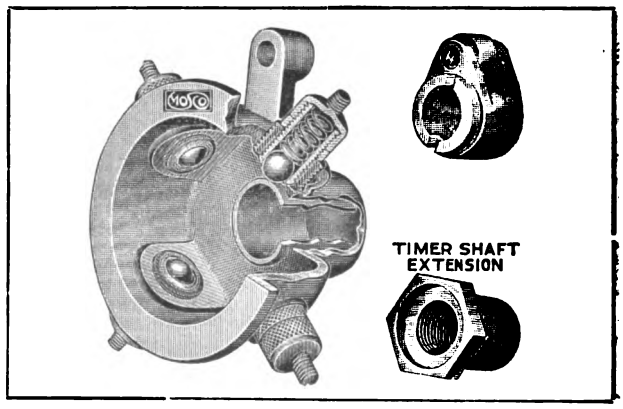
Spedolene Also Makes for Efficiency and the Selling Proposition Will Interest Dealers.

Double the mileage over that obtained with conventional lubricants, is the claim made by the Continental Asbestos Corporation, 11 Summer street, Worcester, Mass., maker of Spedolene. It is composed of asbestos and the best mineral oil, is fluid and mobile, and penetrates between all bearing surfaces. It is made in two grades, and is sold in various sized containers. The selling proposition will be mailed upon request.

PERFECTED FORD TIMER.

Motor Specialties Company Producing the Bemus Commutator, Especially Adapted to Model T Motor.

The Motor Specialties Company, Waltham, Mass., which has been building timers for gasoline motors for over 10 years, has perfected a commutator for the model



Bemus Timer, Particularly Adapted to Ford Motor.

T Ford motor. The Bemus timer replaces the conventional member, and an accompanying illustration shows its construction. The member, which closes the primary circuit, is a hardened metal roller, which makes contact with a steel ball. The contact is positive, one that is not affected by oil or dirt, and is self-cleaning. It is stated that starting is made easy because there is practically no resistance in the primary circuit. The timers retail for $2.25 and are guaranteed.

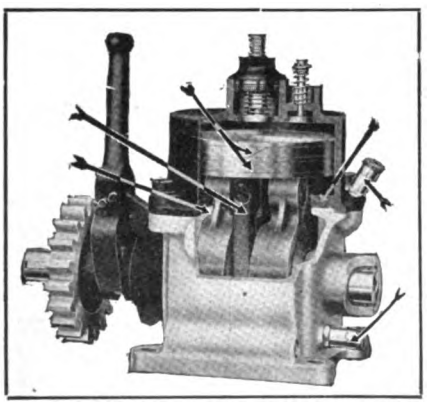
KELLOGG AIR PUMP.

Is Engine Driven and Comes Complete with Attachments, Hose and Gauge for All Cars.

Announcement is made by the Kellogg Manufacturing Company, Rochester, N. Y., specialist in pumps, that orders for its No. 101 engine driven pump can be taken care of promptly either at the main office or at any of the branches at Boston, New York City, Detroit, Chicago or San Francisco. The company is also represented by a large number of distributors.

The No. 101 pump comes complete with air hose, gauge and attachments for mounting, and it is a simple matter to install the outfit, as the parts are carefully and accurately made. The retail price of the equipment is but $15, and the company is prepared to fill orders promptly for any standard type of motor vehicle. An accompanying illustration shows the construction and compactness of the pump, which is sold with the usual broad Kellogg guarantee as to workmanship and material. The Kellogg pumps are also guaranteed not to spray oil with the air.



Kellogg No. 101 Power Air Pump.

OFFERS BIG OPPORTUNITIES.

Pyrene Company of New England Has Attractive Proposition for New Dealers Everywhere.

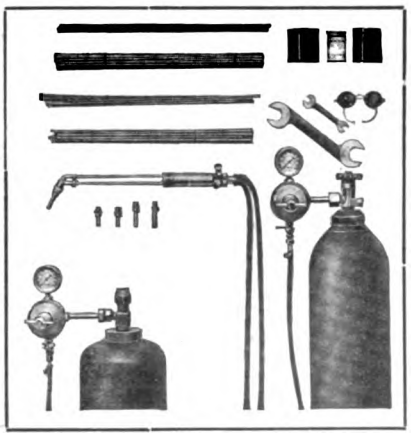
With the ever growing cry of "safety first", the dealer who handles the product of the Pyrene Company of New England, 88 Broad street, Boston, Mass., is well up in the front ranks. The 10th command of the Safety First Society's creed is: "Include Fire Extinguisher", and the society's model car carries Pyrene as regular equipment. The Pyrene brass and nickel plated fire extinguishers are the only one-quart machines included in the list of fire appliances approved by the National Board of Fire Underwriters, and the insurance companies grant a 15 per cent. cut on all premiums when this extinguisher is used. The company has exceptional offers to make dealers, and a post card or letter to the Boston address will bring immediate response to all requests.

WELDING OUTFIT OFFER.

Free Trial of Waterhouse Equipment Which Is Sold on Easy Terms.

Garages and repair shops desiring a welding and decarbonizing equipment on easy terms will be interested in the offer made by the Waterhouse Welding Company, 3 Pelham street, Boston, whose equipment is well and favorably known to the trade.

The company offers a free trial for two weeks of its complete welding outfit, which sells for $42. At the end of two weeks the equipment can be returned to the maker and it is not necessary to give any reason for so doing. This offer is made because of the confidence of the company in its product. If the garage or repair shop decides to retain the equipment, easy term payments are arranged.



Some of the Components of Waterhouse Welding Outfit.

With every welding equipment there is given free a carbon burning torch and, if it is not desired, a deduction is made from the regular price of the complete equipment. Practical and complete instructions accompany each outfit and garages and repair shops considering the use of welding and decarbonizing apparatus will do well to get in touch with the Waterhouse Welding Company.

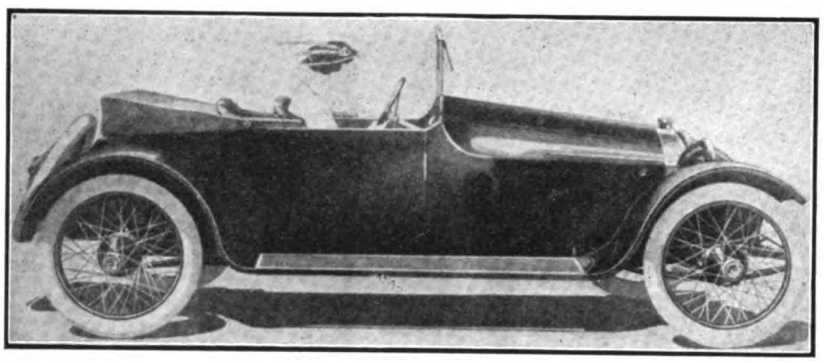
SCRIPPS-BOOTH FEATURES.

Luxury Is the Keynote of New Four-Cylinder Light Car.

The keynote of the latest offering of the Scripps-Booth Company, Detroit, Mich., is luxury. Featured by everything that is unusual and out of the ordinary run, the new Scripps-Booth car, selling for $775, is in a class by itself. The motor is a four-cylinder, and the three-passenger body is built along new and original lines. Three bodies and three treads are offered, the former comprising a roadster, coupe and cabriolet. The car presents a low, rakish appearance, and this effect is accentuated by the sloping hood, V shaped radiator, torpedo rear and the Houk wire wheels. A fifth Houk is mounted on a specially constructed bracket at the rear.



The Scripps-Booth, a Light Car Built with the Idea of Luxury and Comfort.

In the new Scripps-Booth many departures from the conventional lines have been made. Electric door latches, which eliminate handles, unique spark and horn controls and real leather upholstery form part of the refinements. The electric door lock is operated by a push button, placed close to the door in the side of the body, and this operates the latch automatically. At the top of the steering post and in the centre of the 16-inch walnut steering wheel is a push button three inches in diameter, which operates the Klaxet horn. Likewise, there is a throttle lever mounted on the steering post, just below the horn button. This, unlike the conventional spark levers, swings vertically.

AUBURN HAS BIG VALUE.

Four Sells for $1075 and Six for $1550, Fully Equipped.

With a four selling for $1075 and a six for $1550, the Auburn Automobile Company, Auburn, Ind., is offering a dollar-for-dollar value. The company makes no pretense of anything freakish, but presents a beautiful appearing, well built car, with quality as the standard. The four-cylinder motor, L head, cast en bloc and water cooled, has a bore of 3¾ inches and a stroke of five, giving it a horsepower rating of 22.50, according to the S. A. E. formula. The piston displacement is 221; the lubrication is by splash and the fuel feed is by the latest improved vacuum system.

The six-cylinder motor has a bore of 3½ inches and a stroke of five, giving it a rating of 29.40, S. A. E., but as in the case of the four, a great deal more power can be developed with ease. The lubrication is by combination splash and pump, and a Rayfield carburetor is used in both models, the six also having the vacuum fuel feed system. Electric starting and lighting form the regular equipment on both models. The wheelbase and tire sizes of the four and six, respectively, are 114 and 32 by four, and 126 and 34 by four.

Both models have three speeds forward and reverse, and the four has a three-quarter floating axle, while the six employs the full floating type The tires used on the former are 32 by four inches and on the six 34 by four. The Auburn product is standardized throughout and the best possible workmanship and material is a feature.

WINTON HAS LIGHT SIX.

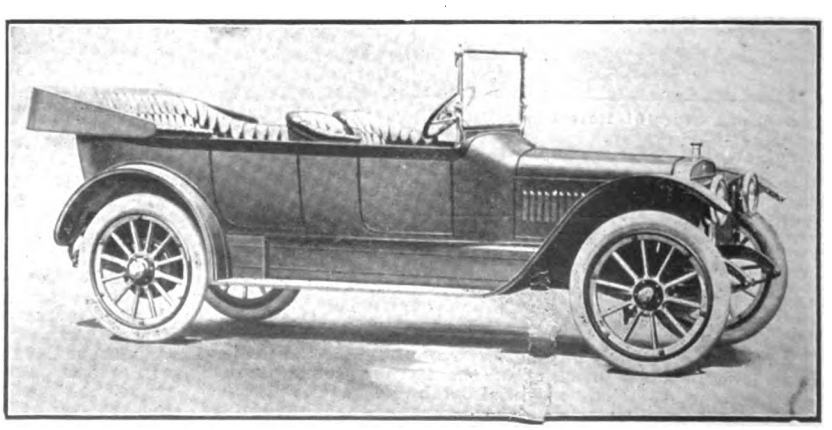
Selling for $2285, Cleveland Concern Adds to Line.

The Winton Motor Car Company, Cleveland, O., announces a new light six-cylinder model, which is known as 21-A. The new car is smaller in every way than the standard Winton six 21. The wheelbase is two inches shorter, and the motor has a bore of 3⅝ inches and a stroke of 5¼, compared with the 4⅛-inch bore and 5½-inch stroke of the larger machine. The S. A. E. horsepower rating of the light six is 31.6, and that of the larger six 48.6. The power plant of the latest Winton product is of the L head type, the six cylinders being cast in pairs, water cooled, with the valves on the left side. The valve action is completely enclosed and the crank case is extended back to include the flywheel. This is different from the previous model, as in that the flywheel was exposed. Another innovation is the placing of the carburetor and magneto on the right side of the motor, and the former is mounted quite high, being bolted by means of a short elbow against a balanced intake manifold. The lubrication is by a pressure feed system in which the oil is circulated by a gear pump located in the crank case. Driven by spiral gears, this pump takes the oil through a screen from the lower crank case and delivers it through a tube cast in the crank case to the main bearings and, through conduits drilled in the crankshaft, to the connecting rod bearings.

A Bosch magneto, with a battery to supply auxiliary current for starting, furnishes the ignition. The magneto is connected to the drive shaft by an adjustable Oldham coupling placed between the magneto and the water pump. The balance of the electric equipment for lighting and starting comprises the Bijur two-unit system. Cooling is by water, this being circulated by a gear driven centrifugal pump. The water jackets surround each cylinder and, to keep the water clean and to prevent corrosion, the surface is plated with an anti-rust coating.

All the brakes act in the conventional manner, two external and two internal. Left drive and centre control are used. All the instruments are carried on the cowl board, this including the lighting switches, ammeter, carburetor control, motor primer, speedometer, clock and ignition switch. The cowl is lighted by an electric light. A ventilating, rain vision windshield is carried over the cowl. The lighting consists of head and tail lights, side lamps being eliminated. The headlights carry small lamps on a separate switch, which serve side light purposes. All electric wiring is enclosed in flexible tubing, and the wires running from the chassis to the body terminate on a terminal strip secured to the lower side of the fuse box. This box is located on the engine side of the dash and any trouble in the wiring system can be tested at this point. After taking off the cover the removal of two screws breaks all connection between the wires from the chassis to the body, so that the changing of bodies is much simplified and does not require the services of an electrician.

The five-passenger body is of an entirely new design for the Winton and follows the general streamline effect now in vogue. There are four wide doors with handles inside. Comfort and restful riding are assured by luxuriously deep and easy cushions and upholstery.



The New Winton Light Six Model Fitted with a Five-Passenger Body.

DIXON GRAPHITE.

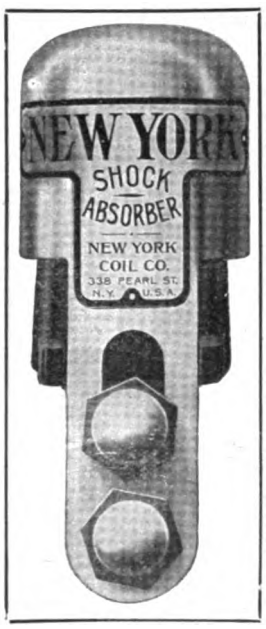
Jersey City Company Has Unexceptionally Attractive Proposition for Dealers.

The Joseph Dixon Crucible Company, Jersey City, N. J., maker of the world renowned Dixon graphite automobile lubricants, is carrying on its usual strong selling campaign for its products. This company is the only concern in the world that produces the peculiar form of graphite that goes to make up its lubricant. With this rare form of flake as a basis it has produced a line of graphite lubricants specially designed for every separate part of the car. No. 677 is a special graphite for differentials, and repeated tests have proven that more mileage and greater smoothness of running will result from its use. This graphite is unaffected by heat or cold, and will not turn thin. Dealers are invited to write for complete details of selling campaigns and service plans.

NEW YORK SHOCK ABSORBER.

New York Coil Company Announces New Design for Ford Car, One That Is Easily Attached.

The New York Coil Company, 338 Pearl street, New York City, announces a new shock absorber for the Ford car, termed the New York. It differs from conventional types in that it may be installed without displacing the rear wheels or front axle spring perches, as the absorbers replace the original spring shackle. It is stated that it is not necessary to employ even a jack.



New York Shock Absorber.

The device consists of but three pieces aside from the bolts. The housing is of a special heat treated steel, which contains the spring designed to carry the weight of the car. A sliding member is arranged to rest on top of the spring perch, which is free to move up or down, as slots are provided in the two outside arms, which are integral with the main member. The maker calls attention to the operation of the absorber in that it has two motions, up and down, as well as a side motion to compensate for the lengthening and shortening of the spring, which is caused by the movement of the body. It is stated that side sway of the body is eliminated. Bushings are not necessary with the device, which the maker states practically floats without any side strain or twist. It is also said that a Ford car has been run with the New York absorbers with the upper shackle bolt entirely removed. This is held to be due to the sliding member resting on the spring perch instead of on the shackle bolt. The maker points out that the device cannot come in contact with the front fender braces, and that ample clearance of the spokes of the rear wheels is provided, as the absorber moves away from the fender braces. The complete set of four retails for $7. Attractive literature will be supplied upon request.

NEW APCO CATALOGUE.

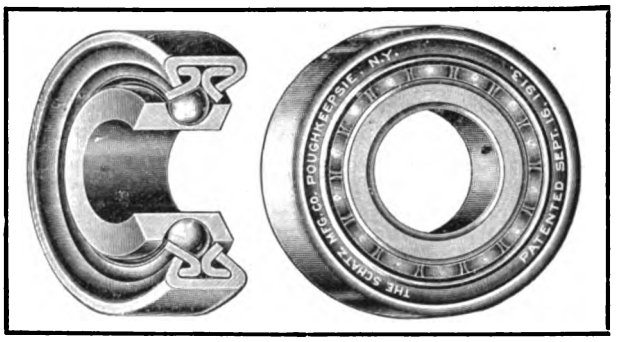
Auto Parts Company, Providence, R. I., Issuing New List of Specialties, Including Many New Ones.

The 1915 catalogue of Apco specialties, supplies, parts, etc., for the Ford car is being distributed by the Auto Parts Company, Providence, R. I., the manufacturer. Many new devices are noted in the book and a number of the trade prices have been revised. The catalogue will be supplied upon request.

UNIVERSAL BALL BEARINGS.

Schatz Manufacturing Company Producing Two Distinct Types of Annular Members.

The Schatz Manufacturing Company, Poughkeepsie, N. Y., is producing two distinct types of annular ball bearings to meet the demand of the manufacturers of light motor vehicles, accessory makers and the trade in general. These bearings are known as the Universal. That for the light car trade and accessory manufacturers is made in inch sizes and in these designs the bore, the ball races in both the cone and cup rings and the



Illustrating Construction of Schatz Ball Bearings.

outside diameter dimensions are carefully ground within standard limits. The bearings are made with a solid steel cone, pressed steel cup rings, and a soft steel outer jacket which grips and holds the outer cup rings rigidly in place. The ends of the soft steel jackets are turned in, in an angular position, against the cup rings, as shown, affording a finish and also reinforcing the cup rings.

The maker calls attention to the three-point contact obtained by the construction, and states that it is impossible to break a ball under the most severe conditions of service. It is further stated that the design obtains all of the advantages of the annular type, and that 70 per cent. radial thrust is secured. The cone and cup rings are made of chrome vanadium steel, carefully heat treated, hardened and tempered.

The other type is made in metric dimensions to interchange with the conventional series of international standards. The same construction and materials are employed as in the other form, with the exception that the bearings are silent and are assembled with a pressed steel spacer or cage. The Schatz Manufacturing Company will supply complete details of its line upon request.

DEALERS ORGANIZE.

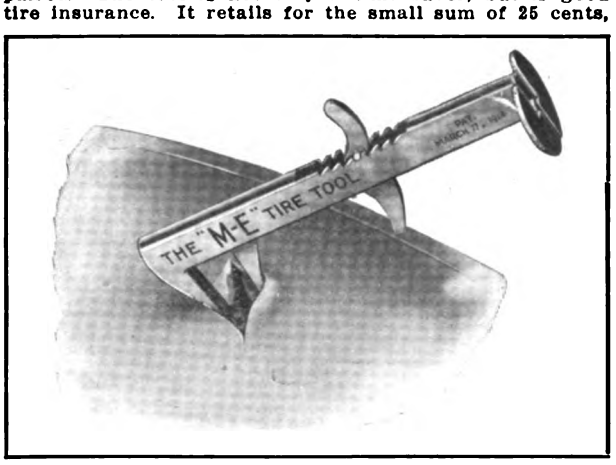
Milwaukee, Wis., Tire and Accessory Houses Form a Permanent Organization at Recent Meeting.

The automobile, tire and accessory dealers of Milwaukee, Wis., held a meeting recently in that city and decided to form a permanent organization.

THE "M-E" TIRE TOOL.

A Convenient Device for Holding Open Surface Cuts While Making Repairs to a Casing.

W. Lewis Mack, 24 West Jackson boulevard, Chicago, Ill., general distributor for motor vehicle specialties, is marketing the "M-E" tire tool, shown herewith, which is a most convenient tool for holding open surface cuts in tires when the apertures are to be cleaned and repaired. The tool is not only a time saver, but is good tire insurance. It retails for the small sum of 25 cents,



The "M-E" Tire Tool for Holding Open Surface Cuts.

and the discounts are liberal. Particulars of the line marketed by W. Lewis Mack, some of which are described elsewhere in this issue, will be supplied to those interested upon request.

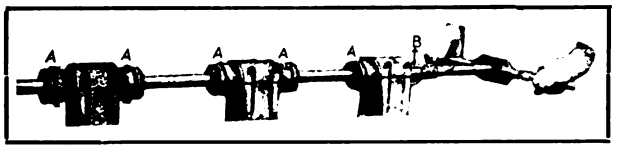
FITTING BEARINGS.

How Martell Aligning Reamer Scrapes in Bearings and Saves Over 75 Per Cent. in Time.

New and improved repair shop equipment has not only made possible better work, but makes for economy in time and labor. Scraping in the bearings of a motor by



Martell Aligning Reamer Fitted to a Three-Bearing Crankshaft.

hand has now given way to newer methods in the motor vehicle factory and up-to-date repair shops and service stations.

An accompanying illustration shows the Martell aligning reamer set up in a three-bearing crank case and ready to ream out bushing No. 1. The tapered aligning bushings, each having micrometer adjustments, are indicated at A, and the adjustable reamer at B. The Martell is not only an instrument of precision, but it can be operated by any workman. The Harding Distributing Company, Boston, Mass., is publishing a book on the subject of motor bearings, which also explains in detail the operation and advantages of the Martell aligning reamer.

A TEST CLIP FREE.

R. S. Mueller & Co. Will Supply Sample of the Universal to the Trade to Demonstrate Its Worth.

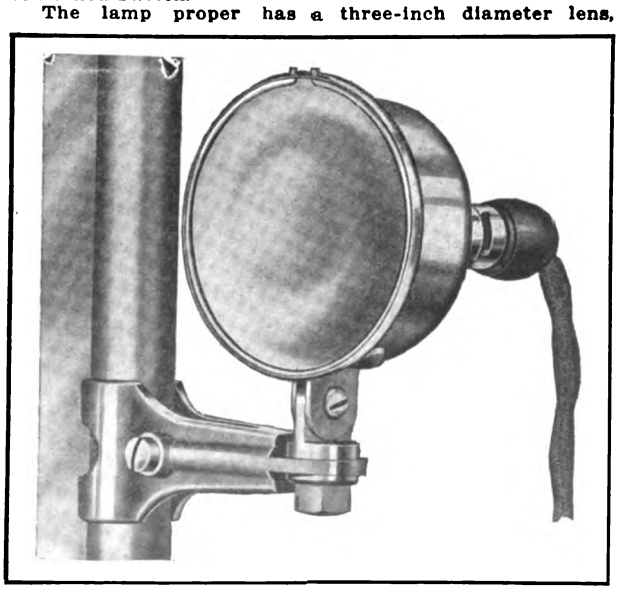
R. S. Mueller & Co., 431 High avenue, Cleveland, O., will forward free one Universal test clip, provided the request is made upon the letter head of the dealer, garage or repair shop. The Universal test clip is a practical time and labor saving device and may be utilized for a number of useful purposes which the company will explain upon request.

C-S HAND LAMP.

Culver-Stearns Manufacturing Company Producing Electric, Swivelling Windshield Lamp.

The Culver-Stearns Manufacturing Company, Worcester, Mass., has brought out a practical and useful electric lamp termed the C-S hand lamp. As may be noted by the accompanying illustration, it is attached to the windshield and, having a swivel joint, its rays may be directed where wanted. The method of attachment permits of locating the light as desired, and one of the noticeable qualities of the design is that it has a self-contained switch.

The lamp proper has a three-inch diameter lens,



Culver-Stearns Electric Hand Lamp Having a Swivel Joint.

which fully protects the reflector. The finish is nickel plate. The C-S hand lamp is supplied for double contact, but a special plug permits the use of the one-wire system. Bulbs are provided for service with any electric lighting system. The regular equipment comprises a 10-foot extension cord, attachment plug, and a six-volt, eight-candlepower tungsten bulb. The lamp retails for $2.50, but the discount to the trade is very liberal. This equipment should be in demand by the motorist, as it can be utilized for a number of useful purpose, such as noting sign boards, street numbers, etc.

WATERBURY DEALERS DINE.

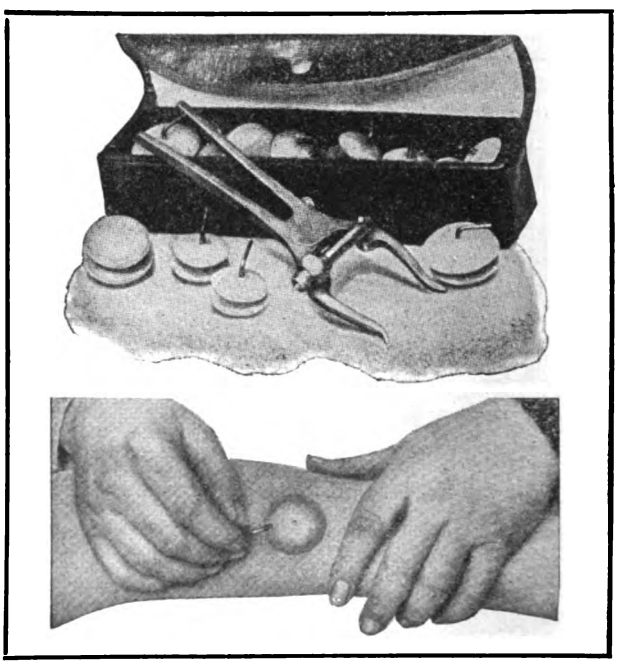
Hold Meeting Previous to the Banquet and Discuss Programme for the Coming Year.

The automobile dealers of Waterbury, Conn., and vicinity held a meeting recently and outlined their programme for the year of 1915. Following the discussions a banquet was served.

SAMPSON REPAIR PLUG.

Permanently Cures Punctures Without Aid of Gasoline, Cement or Patches, by Novel Method.

Stevens & Co., 378 Broadway, New York City, is marketing the Sampson repair kit shown herewith, which is



Showing Sampson Repair Kit and Method of Breaking Wire from Plug.

a complete equipment for repairing punctured inner tubes. One of the desirable qualities of the Sampson plug is that its use requires no cement, gasoline or cleaning of the tube or plug.

The plug is made in two sections as shown, and these are drawn together by means of a threaded wire. A special tool is provided for distending the opening in the tube while the plug is inserted, and afterwards the two halves are screwed together by means of the threaded wire. The last named member is then broken off as indicated in the illustration.

The advantages of the Sampson plug are: A quick repair of a puncture, a permanent sealing of the opening and convenience. With one of these kits tubes can be mended on the road and at a small expense, as the plugs are inexpensive. The Sampson tool and plugs come in a neat container, and interested dealers should write for discounts and details of the selling proposition.

NEW CARLETON GENERATOR.

Porcupine Drive, Preventing Slippage of Belt, a Feature of New Lighting Equipment.

The Carleton No. 68 generator, which provides current for lighting, and which may be utilized with or without a storage battery, is now being featured with a new drive. The Porcupine drive prevents belt slippage and reduces bearing stresses to the minimum. The Carleton generator lists at $15 and the discounts to the trade are very liberal. Complete details of the lighting equipment, which is adaptable to all machines, will be forwarded upon request.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

GASOLINE PLEASURE CAR AGENCIES.

3885—Ohio House wants information relative to the agency of gasoline pleasure cars selling from $400 to $2500.

COMMERCIAL CAR AGENCIES.

6167—New York Dealer is anxious to secure gasoline trucks selling from $850 to $2500.

6170—Ohio Concern is in the market to represent gasoline trucks ranging in price from $450 to $2500.

ACCESSORIES, EQUIPMENT, SUPPLIES.

576—New York Dealer wants air compressors, anti-rattlers, arbor presses, asbestos, axles, batteries, bearings, belts, bodies, bolts, brakes, brushes, bulbs, bumpers, burners, cable, carbide, carburetors, castings, chains, clamps, clips, clutches, coils, drills, elevators, fenders, forgings, gaskets, gasoline, jacks, knuckles, machinery, metal parts, mufflers, packing, paints, pedals, polishes, reamers, shims, shock absorbers, springs, tools, turntables and waste.

577—Connecticut Dealer wants a first-class line of automobile supplies.

580—Ohio Firm is anxious to hear from an up-to-date line of air compressors, cranes, elevators, gasoline, glass, hoists, lathes, machinery, tires and tools. These goods are to be used for garage equipment, which is to be thoroughly fitted out by Jan. 1, 1915.

583—Massachusetts House wants air compressors, boilers, cabinets, cranes, doors, glass, hoists, storage systems, tanks, vulcanizers, washers and washstands. The above products to be used in a garage.

586—Pennsylvania Firm wants to get in touch with a line of batteries, bulbs, cable, carbide, carburetors, cements, chains, charging apparatus, coils, connectors, drills, dynamos, generators, headlights, horns, ignition, lamps, lubricators, magnetos, mechanical starters, motors, nuts, pinions, pistons, platinum, plugs, pullers, pumps, rectifiers, rims, shock absorbers, speedometers, storage systems and tires. The goods to be used for retailing purposes.

588—Michigan Dealer wants prices on air compressors, anti-rattlers, batteries, bolts, castings, chemical tanks, cups, discs, forgings, gaskets, gauges, headlights, hubs, lamps, metal parts, packing, plugs, rubber, shock absorbers, springs, stampings, vulcanizers and wheels.

591—Kansas Firm is interested in batteries and radiators.

594—Illinois House wants information in regard to air compressors, air pumps, anti-rattlers, fire extinguishers, goggles, graphite, jacks, maps, packing, racks and rectifiers. The goods to be used for sale on jobbing basis.

595—Kentucky House wants 5000 pleasure car and power wagon parts to be used for Overland and Willys Utility cars.

598—Illinois Concern wants air compressors, air pumps, batteries, bodies, bulbs, bumpers, carburetors, fire extinguishers, gasoline, graphite, lamps, lubricators, maps, mechanical starters, plugs, polishes, pumps, radiators, shock absorbers, tire accessories, tires, tools, waste and wrenches.

599—Iowa Firm is interested in anti-rattlers, batteries, brakes, brushes, bulbs, bumpers, burners, cable, carburetors, chains, connectors, cutters, cushions, dimmers, drills, engines, gaskets, glass, goggles, hammers, headlights, horns, hose, ignition, jacks, lamps, magnetos, nuts, patches, platinum, plugs, pumps, shock absorbers, waste and wrenches. The goods to be used for retail purposes.

602—Tennessee Dealer wants information relative to batteries, burners, cements, chains, dynamos, gasoline, headlights, horns, indicators, magnetos, odometers, packing, carbon removers, speedometers, storage systems, tires, vulcanizers, whistles and wrenches.

605—Maryland House is in the market for batteries, belts, bolts, celluloid, gasoline, hose, lathes, soaps, rubber stampings and waste.

608—Massachusetts Concern wants air compressors, batteries, bolts, dimmers, dynamos, lathes, printed matter, carbon removers, starters, tire accessories, vulcanizers and wrenches.

613—Pennsylvania Dealer is in the market to carry a full line of automobile supplies.

617—New York Dealer wants air compressors, air pumps, anti-rattlers, batteries, bearings, bulbs, carbide, carburetors, cements, coils, dimmers, drills, emblems, fans, fenders, gasoline, goggles, hydrometers, lubricators, magnetos, maps, odometers, paints, printed matter, pumps, radiators, reflectors, carbon removers, rims, searchlights, shock absorbers, soaps, speedometers, springs, storage systems, switches, tanks, tape, terminals, testers, timers, tire accessories, tires, tools, turntables, vaporizers, vulcanizers, waste, wearing apparel, whistles, wire and wrenches. The above goods are to be used to equip an automobile store.

620—New Jersey Dealer is interested in axles, batteries, bodies, castings, engines, fenders, forgings, frames, lamps, mufflers, radiators, springs, steering wheels, steps, transmissions, wheels and windshields.

621—California Company wants air pumps, axles, batteries, bearings, bodies, bumpers, cable, carburetors, coils, commutators, couplings, dimmers, emblems, engines, fans, generators, headlights, horns, ignition, indicators, jacks, lamps, magnetos, mechanical starters, motors, packing, paints, platinum, plugs, polishes, printed matter, pumps, punches, radiators, rims, scrapers, searchlights, shock absorbers, speedometers, starters, steering wheels, switches, timers, tools, vaporizers, waste, wheels and wrenches.

624—Ohio House wants bearings, chains, cups, gasoline, hoists, ignition, odometers, plugs, ratchet drills, reamers, springs and tools.

626—Massachusetts Concern wants arbor presses, charging apparatus and soaps.

627—Michigan Dealer wants a line of Ford accessories, also starters.

631—California Company is interested in batteries, headlights, storage systems and tires.

633—Ohio Concern is interested in carbide, clamps, clips, gaskets, gasoline, goggles, horns, jacks, lamps, rims, terminals, tire racks, tire tape, tire accessories, tires (seconds), tubing and wrenches. The goods are to be sold at wholesale and retail.

636—California Dealer wants indicators.

638—Michigan Firm is interested in batteries, chains, gaskets, gasoline, generators, jacks, maps, packing, plugs, polishes, primers, printed matter, soaps, solder, tires, tools, tops and parts, turntables, vulcanizers, waste and wrenches.

641—Texas Dealer wants information relative to air pumps, batteries, brushes, bulbs, clutches, jacks, starters, tape and tires.

643—Washington House is desirous of securing tungsten valves.

645—Arkansas Dealer wants tools, equipment and supplies for a garage.

646—Ohio Firm is interested in air compressors, air pumps, anvils, batteries, bulbs, ratchet drills, reamers, tire accessories, tires, tools, vises and wrenches.

649—West Virginia Dealer wants aluminum stampings to be used for vulcanizing tires, rubber, tire accessories and valves. The products are to be used in a tire repair shop.

652—Massachusetts Firm is interested in shock absorbers and speedometers.

653—Wisconsin Dealer wants tire accessories and tires.

655—California Concern is interested in axles, carburetors, chains, emblems, engines, fenders, gear cutting machines, gears, joints, levers, mechanical starters, metal parts, motors, paints, pedals, pinions, pistons, polishes, printed matter, radiators, reamers, rims, screws, stampings, steps, tanks, transmissions, upholstery, varnishes, waste and wheels. The above goods are to be used in the manufacture of half-ton and one-ton trucks.

657—Oklahoma House wants information relative to air compressors, air pumps, anti-rattlers and chains.

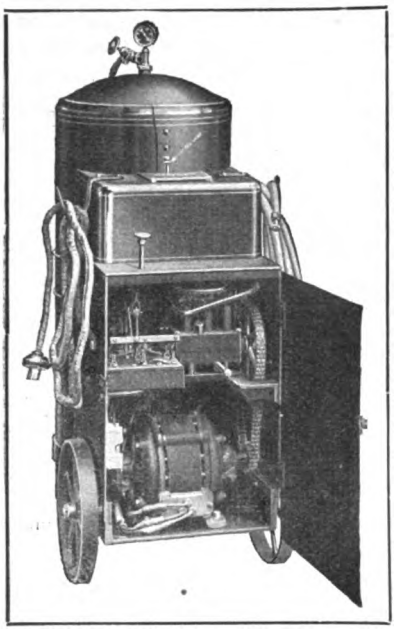
KELLOGG GARAGE PUMP.

An Electrically Driven Motor Garage Pump of the Portable Type and Having Many Practical Features.

The advantages of the portable tire pump in the garage are well established by practise, as with it air can be delivered to the car inside or outside of the garage. It eliminates the trouble and time lost in moving the machine to the pump, thereby effecting economy.



Kellogg Motor Driven Garage Pump.

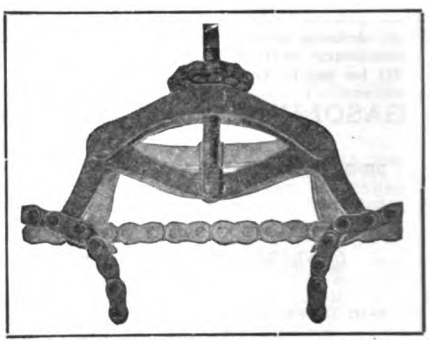
The Kellogg Manufacturing Company, Rochester, N. Y., has brought out a highly perfected unit that, it is stated, will save from $15 to $20 a month in power bills over conventional types.

The outfit is shown in an accompanying illustration and, as may be noted, it is complete in every respect. It is an electrically driven motor garage pump and has 200 pounds capacity, insuring about 100 per cent. more volume than a tank of 150 pounds capacity. The maker states that it will inflate 16 - 34 by four-inch tires from flat to 80 pounds pressure without replenishing the supply. The pump will fill the tank to its capacity in 20 minutes. One of the features of the equipment is the automatic cut-out, which makes for absolute safety and saves time. The details of the cut-out and the equipment, with trade discounts, will be supplied by addressing the Kellogg Manufacturing Company, 271 Circle street, Rochester, N. Y. In writing, ask for details of the special offer, cash or trial.

HANDY SPROCKET CLAMP.

Inexpensive and Practical Tool for Repairing Motor Vehicle and Motorcycle Driving Chains.

The difficulty of drawing together the ends of the driving chains of the motor vehicle or motorcycle, especially when these members break on the road, is well known to those who have attempted to connect the master link. The Racine Auto Specialty Sales Company, 826 Consumers' building, Chicago, Ill., is marketing the Handy sprocket clamp, shown herewith. The tool is very compact and the heaviest of chains may be handled easily and quickly. As may be noted by the illustration, the device has a pair of jaws for gripping the ends of the chain, which are drawn together by a toggle construction actuated by a threaded bolt in the linkage. The truck size Handy sprocket clamp retails for $1.25, and that for motorcycles lists at $1. The discounts are liberal. Details supplied by addressing department E.



Handy Sprocket Chain Clamp.

CONVERTIBLE BODY FOR FORD.

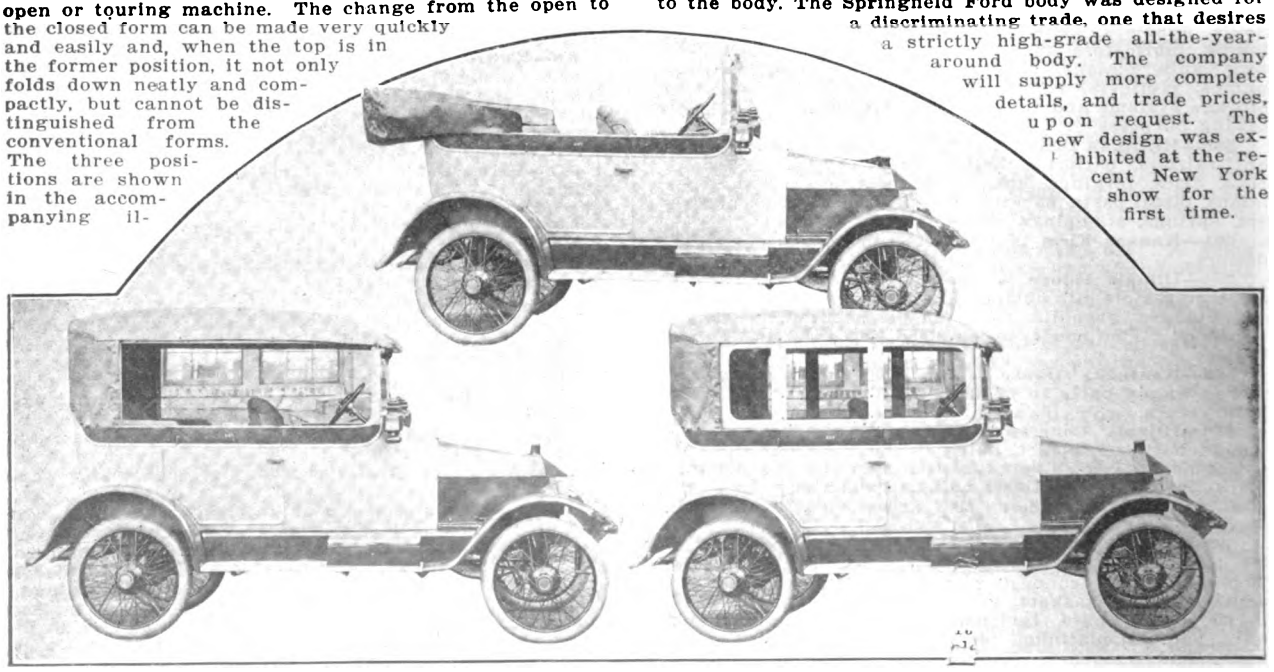
Springfield Metal Body Company Brings Out a Special All-the-Year-Around Type.

The Springfield Metal Body Company, Springfield, Mass., which has been specializing on the convertible type of body for years, and whose product is well and favorably known to the industry, announces a design adaptable to the model T Ford chassis. The details of the new type have been carefully worked out and, as may be noted by the accompanying illustrations, the body greatly enhances the appearance of the car.

One of the several desirable qualities of the Springfield body is that it provides an all-the-year-around motor vehicle, obtaining all of the comforts and protection of the enclosed car, as well as desirable features of an open or touring machine. The change from the open to the closed form can be made very quickly and easily and, when the top is in the former position, it not only folds down neatly and compactly, but cannot be distinguished from the conventional forms. The three positions are shown in the accompanying illustrations. That at the top depicts the vehicle with the top folded. The view at the left shows the top up and glass windows folded, providing protection from the sun. That at the right is similar with the exception that the windows are in place.

As is true with all Springfield bodies, the new design is rattle, dust, water and weather proof; its sides have large openings without posts or framing to obstruct the view other than the molding around the glass, and the occupants of the rear seat have a clear view at all times. The doors are wide, making for easy entrance and exit, and the same space and conveniences are provided as are obtained with the limousine or enclosed types.

The top structure is very light and the folding process is performed more easily than with the conventional tops. As may be noted by the accompanying illustration at the right, there are three windows on each side or six to the body. The Springfield Ford body was designed for a discriminating trade, one that desires a strictly high-grade all-the-year-around body. The company will supply more complete details, and trade prices, upon request. The new design was exhibited at the recent New York show for the first time.



Illustrating the Open, Top Up and Closed Position of the New Springfield Convertible Body Designed for Attachment to the Model T Ford Chassis.

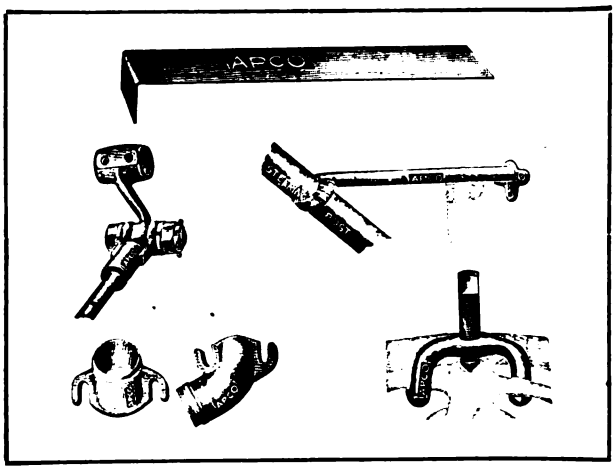
NEW APCO SPECIALTIES.

Auto Parts Company, Providence, R. I., Announces a Number of Useful and Practical Devices for Ford Cars.

A number of new Apco specialties are offered the trade by the Auto Parts Company, Providence, R. I., the well known maker of accessories, equipment and parts for the model T Ford car. One of these, a lined brake shoe, fills a long felt want. The production of an emergency brake shoe for the Ford involved a number of problems, but these have been overcome and the Apco brake shoe is so constructed that it can be lined with an asbestos friction material, and the lining renewed from time to time as required. The shoe is a malleable casting, and a set of two lists for $1. The lining and rivets are supplied for renewal for the small sum of 25 cents. This renewal feature will be appreciated by owners.

Another useful Apco specialty is the steering wheel puller, which sells for 50 cents. The steering wheel on the Ford is not easily removed, as it is a drive fit on the column. Displacing it with ordinary tools generally results in damage to the spider and, as the supply of grease in the gears must be renewed from time to time, the Apco wheel puller will do the work easily and quickly. The tool is constructed from semi-steel and is black enamelled.

The cylinder water connections of the motor are stated to have given more or less trouble, and generally are difficult to remove without breaking. The Apco connections are made of malleable iron, and a desirable quality of the design, one that will appeal to the owner undertaking his own repairs, is that slots are incorporated in the connections for the bolts instead of the usual holes. This makes it a simple matter to displace the connection when desired. The new part is made for either top or side and retails for 25 cents each.



Some of the New Apco Specialties and Parts for the Ford Car, Including Brake Rod Clevis Anti-Rattler, Steering Column Brace, Cylinder Water Connections and Steering Wheel Puller.

Many owners of the Ford car make it a practise to use the steering wheel for a handle when entering and leaving the car. This results in loosening its supports and produces play. To strengthen the steering column, the Auto Parts Company has brought out a brace, one end of which is clamped to the steering column and the other secured to the dash. The device is practical and can be installed in a few minutes with a wrench and a screw driver. It sells for $1.

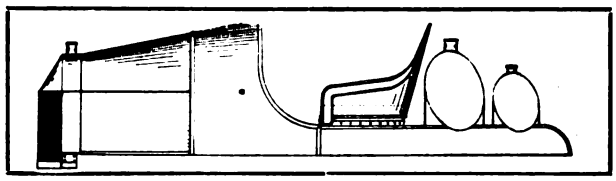
Another useful part is the brake rod clevis anti-rattler, consisting of a special hardened bolt with a nut, a cotter pin and lock washers. The new device is for eliminating the rattle caused by a worn clevis pin. The Apco device not only prevents rattling, but it is adjustable, permitting of taking up lost motion from time to time. Four of these are required on the Ford car and they sell for the small sum of 10 cents each. Descriptive matter and trade discounts will be supplied the trade upon request. In writing, ask for the 1915 Apco catalogue.

FORD SPEEDSTER BODY.

Auto Parts Company, Chicago, Ill., Supplying Complete Equipment for Changing Car into Attractive Model.

To meet the increasing demand for a streamline body and speedster effect, the Auto Parts Company, 739 West Jackson boulevard, Chicago, Ill., is producing an equipment which will change the Ford car into a snappy and attractive roadster type of automobile. One of the desirable qualities of the equipment is that it can be attached by the most inexperienced Ford owner, making it a good selling proposition for garages and dealers.

An accompanying illustration shows the Auto Parts



Streamline Speedster Type of Body, Including New Hood, Dash, Seats, Radiator, Oil and Fuel Tanks, Marketed by the Auto Parts Company, Chicago, Ill., for Attaching to Ford Chassis.

equipment and, as may be noted, the lines are graceful, and the body obtains that desired quality, the appearance of a large motor vehicle. The equipment includes a V shaped radiator, a tapered hood, dash, shroud, upholstered seats, metal streamline body, large gasoline tank and a receptacle for oil. When desired a trunk tool box is supplied in place of the oil tank.

The body is of leaded steel, is substantial, and is nicely finished. It obtains the true streamline effect, and the seats have comfortable backs. Any colored leather is supplied. The radiator comes in nickel or brass. The entire equipment lists for $75, but any part of it will be supplied. Discounts and particulars of the new equipment will be forwarded upon request.

WEED COMPANY CO-OPERATING.

Tire Chain Concern Has Excellent Campaign to Build Up Business of Its Dealers.

An offer to furnish an attractive board for the display of the cross chains which are in constant demand by automobile owners is one of the generous offers being made to dealers by the Weed Chain Tire Grip Company, Bridgeport, Conn. At this season of the year the laying in of a supply of tire chains means a quick turning over of money for the enterprising dealer. The advertising that the company does, together with the attractive displays it offers, assure a live product and no carry over for the next season. It would be of benefit for new concerns, as well as old, to write to the company for the display board and a statement of terms, etc.

PRICE WRECKERS.

Times Square Automobile Company Issues Special Sheet of Attractive Bargains for Dealers.

The Times Square Automobile Company, 1743 Broadway, New York City, and 1210 Michigan avenue, Chicago, Ill., has completed a new Price Wrecker catalogue, which will be supplied the trade on request. This concern carries everything for the motor vehicle.

"X" REPAIRS RADIATORS.

A Liquid Preparation for Stopping Leaks, and It Will Mix with the Anti-Freezing Solution.

The "X" Laboratories, 630 Washington street, Boston, is manufacturing a liquid preparation termed "X", which differs from the conventional compounds marketed for repairing leaks in the radiator, in that the fluid is left in the cooling system. The maker states that it will not affect the anti-freezing solution, and that it will prevent rust and scale from forming. The preparation can also be used for repairing leaks in steam and hot water heaters. It comes in cans containing a supply sufficient to repair two radiators of five gallons capacity or under. Various sizes are marketed to meet requirements. "X" liquid is the result of careful experimentation and the preparation was thoroughly tested before being placed on the market. It is sold under a money back guarantee, and the maker has an interesting dealers' proposition, the details of which will be supplied upon request. "X" liquid will be exhibited at the Chicago show.

"X" Radiator Liquid.

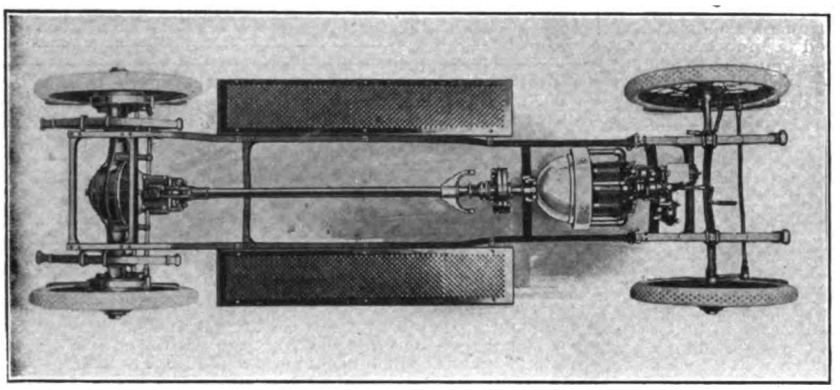
NEW AND DESIRABLE LINES IN DEMAND.

AN APPLICATION of the rotary type of internal combustion engine to the pleasure vehicle is noted in the Eagle-Macomber car, manufactured by the Eagle-Macomber Motor Car Company, 1350 Michigan boulevard, Chicago, Ill. The rotary type of motor has been highly developed in aviation service, and that utilized in the Eagle-Macomber chassis is the invention of W. G. Macomber, a Los Angeles, Cal., engineer. The exclusive sales and manufacturing rights have been acquired by the Eagle-Macomber Motor Car Company.



Illustrating the Compactness and Simplicity of the Macomber Rotary Motor Installed in the Eagle-Macomber Car.

The new motor has been subjected to severe road and laboratory tests, and its utility from a practical standpoint has been demonstrated in aeroplane and motor boat service.

One of the desirable qualities of the motor is its perfect balance. Photographs taken of the engine revolving at 1500 revolutions a minute in the chassis fail to reveal that blur generally accompanying illustrations of mechanical constructions rotating at high speeds.

In addition to the absence of vibration, its compactness and light weight are noticeable. It is stated that the five-cylinder Macomber motor, rated at 14 horsepower, weighs but 115 pounds, including the muffler. The seven-cylinder engine, held to have a horsepower production of 60, weighs but 250 pounds.

The construction eliminates radiators, pumps, fans, etc., and the cooling is by air. Simplicity is a feature of the design, and this is especially true of the ignition system, which consists of a true high-tension magneto that provides a spark for the spark plugs as they pass a sparking plate attached to the magneto.

The bore of the 14-horsepower Macomber motor is 2 9/16 inches and the stroke is three. Any standard type of magneto or carburetor is adaptable to the engine, which is to be built in sizes to meet requirements.

It is stated that the mechanical efficiency and power of the Macomber is about 30 per cent. greater than a reciprocating engine of similar rating, and that it has shown 82.6 per cent. efficiency in laboratory tests.

An accompanying illustration shows the Macomber engine installed in the chassis of the Eagle-Macomber car. Details of this motor, which is adaptable to a number of purposes, will be supplied upon addressing the Eagle-Macomber Motor Car Company, 1350 South Michigan boulevard, Chicago, Ill.

LUBRICATION SYSTEMS.

Various Types Defined and Charted in Instructive Book Given by Platt & Washburn Refining Company.

Every dealer, garage man and repair man should have a practical working knowledge of the various lubrication systems employed with the motor vehicle, for such information is of decided value. One of the most interesting and instructive publications compiled on the subject of lubrication is being printed in its first edition by the Platt & Washburn Refining Company, New York City.

This company has spent a number of years gathering its data, which are based upon practical and laboratory tests, and among the contributors of material are well known motor vehicle manufacturers. There is hardly any detail of the lubrication problem that is not clearly explained in the book, which comprises 44 pages and includes 48 colored illustrations.

Of particular interest to the trade is the defining of the various lubricating systems in vogue. These are so illustrated that the flow, etc., of the oil is clearly shown, and the principles of each type are comprehensively explained.

The subject of carbon is treated in some detail with illustrations showing how the various tests of lubricating oil are made, such as for flash, fire, viscosity, carbon, cold, etc., and the descriptions accompanying each picture are concise. This is one of the many interesting features of the book and a careful study of this department will enable the dealer, repair man and garage man to talk intelligently on the subject of oils and qualify him to answer all questions of the prospective purchaser.

Among the subjects treated at length in the book are the following: Operating Temperatures, Operation of the Two-Cycle Motor, Operation of the Four-Cycle Motor, the Subject of Carbon, Disc Clutch Lubrication, Transmission Lubrication, Differential Lubrication, Chassis Lubrication (with charts), What Happens to the Oil in the Motor, Tests of Liquid Fuels, Motor Efficiency at High Altitudes, Etc.

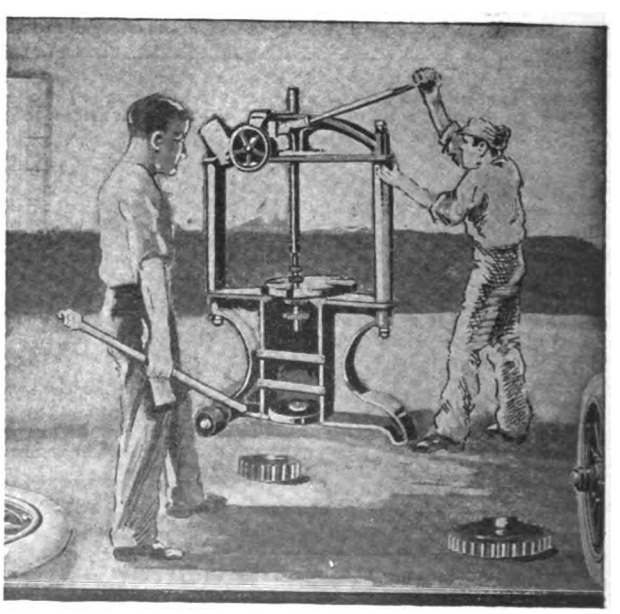
Last, but not least, is the Veedol chart, which occupies the last four pages in the book. In this will be found listed the name of every American car and the best grade of oil adapted to it. The book will be given away as long as the limited first edition lasts. After that it will be sold. Those desiring a copy of this valuable publication may obtain one free by writing the Platt & Washburn Refining Company, 11 Broadway, New York City, and mentioning the Accessory and Garage Journal.

GREENERD NO. 15 ARBOR PRESS.

Particularly Adapted to Motor Vehicle Work and Has a Pressure Capacity of 16 Tons.

Many operations are possible with an arbor press, and among them may be named the straightening of axles and crankshafts, removing bushings and gears, forcing on wheels, broaching holes, pressing ball races on or off shafts, straightening rear axle housings, etc.

Generally the work that requires good equipment is productive of large profits, and, in these days of keen competition, the garage and repair shop must be supplied with time and labor saving equipment. The Greenerd No. 15 arbor press is particularly adapted to motor vehicle work, and an accompanying illustration shows one of the many uses for the press. It has a pressure capacity of 10 tons with one man or 16 tons with two men. The Greenerd press is an economical equipment because of the great diversity of work that can be performed with it. Prices and details will be supplied by the maker, Edwin E. Bartlett, 322 A street, Boston.



Showing One of Many Practical Applications of the No. 15 Greenerd Arbor Press.

The Dallas Automobile and Accessory Dealers' Association, Dallas, Tex., has been formed by 40 dealers in that city.

GENERAL MATERIAL MARKET QUOTATIONS.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period for purposes of comparison. Antimony rose 2½ cents; northern iron fell 50 cents; bessemer and open hearth steel increased 50 cents a ton for the month; electrolytic copper rose 37½ cents a hundred pounds, as did lake, which advanced 35 cents for the past four weeks; tin dropped $1.60 a hundred pounds. Pennsylvania crude rose five cents on the barrel, raw linseed advanced 13 cents and cottonseed oil fell 30 cents on the barrel. Rubber dropped eight cents.

DEALERS ORGANIZE TO PROTECT INTERESTS.

ABOUT 175 tire dealers, handling the products of the Goodyear Tire and Rubber Company, met at Providence, R. I., recently and formed an organization for protecting their business interests. A. E. Goodby was appointed temporary chairman and Charles Paine secretary. An advisory board was appointed consisting of the following: A. W. Flynn, Narragansett Pier; L. S. Huntington, Pawtucket; John Y. Letendre, Woonsocket; E. E. Davenport, East Greenwich; George Wood, Riverpoint; A. J. Stark, Newport; A. B. Smith, Westerly; Howard Duckworth, F. J. Murray, Guy Gifford, Charles Manchester, Frank Kellogg and Frank Glover, all of Providence.

The meeting of the dealers was the outcome of the efforts of A. M. Bannister and S. M. Beatty, connected with the Providence branch of the Goodyear Tire and Rubber Company. The meeting was supplemented by a number of addresses, among the speakers being W. R. Bliss, manager of the Boston branch of the Goodyear Tire and Rubber Company; L. C. Rockwell, manager of the tire division at the Goodyear factory, and George P. Brophy, president of the dealers' association of Boston, Mass. W. T. Teagan, New England manager of the Goodyear Tire and Rubber Company, officiated as toastmaster.

PERFECT ORGANIZATION.

Bristol County, Mass., Dealers in Motor Vehicles and Supplies Form New Association.

Bristol County, Mass., dealers in motor vehicles, supplies and equipment, have formed an organization and propose to eliminate existing trade evils, as well as to protect interests. The meeting was held at Taunton, Mass., and the following officers were elected: J. Edward Newton, Fall River, president; John W. Robertson, Taunton, first vice president; John S. Coy, New Bedford, second vice president; Howard L. White, Taunton, treasurer; Arthur Fontaine, Fall River, secretary. The board of directors comprises the following: Harry Carlow and Fred Shaw, Taunton; A. W. Childs and Mr. Atchinson, New Bedford; Henry Horton and David Cornell, New Bedford.

ELECTS NEW SECRETARY.

Tidewater Automobile Association Appoints W. E. Virnelson to Succeed C. J. Mains.

At a recent meeting the Tidewater Automobile Association, Norfolk, Va., elected W. E. Virnelson as secretary to succeed C. J. Mains, whose term expired the first of the year. A committee has been named to discuss the report of the tax commission, which will be acted upon by the state legislature this month.

"ACQUAINTANCE" LUNCHEON.

Buffalo Automobile Dealers' Association Attends Novel Affair Which Is Well Conducted.

Members of the Buffalo, N. Y., Automobile Dealers' Association were the guests at the weekly "Acquaintance" luncheon at the Chamber of Commerce in that city recently. Each dealer wore a yellow badge at the dinner with the name of the car he represented upon it in black. The trade interests were well represented.

KANSAS CITY MEN MEET.

Motor Car Dealers' of That City Perfect Affiliation with Chicago Automobile Trade Association.

Affiliation with the Chicago Automobile Trade Association in the organization of a new dealers' association was accomplished at the recent meeting of the Kansas City, Mo., Motor Car Dealers' Association. All of the Convention hall space for the annual automobile show, Feb. 8-14, has been allotted, it was announced.

ORGANIZE FOR MUTUAL HELP.

Dealers in Nebraska Form Organization to Crusade Against the Cut Rate Evil.

Uniform prices and an earnest crusade against the "cut rate" automobile man were two of the plans of 60 automobile dealers who met in Omaha, Neb., recently. A temporary organization was formed and this will be made permanent at an early date. Omaha, South Omaha and Council Bluffs were represented at the meeting. All lines of industry relating to automobile traffic will be represented in the organization.

Temporary officers were elected, these being L. W. Prenica, president; Henry Nygaard, secretary, and H. G. Montgomery, treasurer.

GARAGE OWNERS COMBINE.

The United Garage Association of New York State Has Been Formed and Officers Elected.

At a recent meeting of garage owners, service men and automobile repair men in New York City, the United Garage Association of New York State was formed. William Haradon of New York City was elected president. Other officers are: John Van Beuschoten, Poughkeepsie, first vice president; W. D. Sweet, Binghamton, second vice president; A. H. Dudley, Rochester, treasurer, and Henry Waring, New York, general secretary. The association plans to present a bill at Albany asking for a garage lien law in an effort to eliminate undesirables from the garage business.

ST. PAUL MEN BUSY.

Trade Abuses Are Expected to Disappear as Result of Planned Monthly Meetings.

The elimination of trade abuses is expected as the result of a newly organized automobile trade association at St. Paul, Minn. The association will hold monthly meetings at which cordial business and social relations between the dealers will be fostered. H. K. Harrison was elected president at the first meeting. Other officers elected were: H. T. Heberle, vice president; George W. Read, secretary; J. E. Olen, treasurer, and S. B. Dean, Fred Messenger and C. W. Norton, directors.

CONSIDERS AFFILIATION.

Washington Automobile Trade Association Postpones Action on Combining with Retail Merchants' Association.

At a meeting of the Automobile Trade Association, Washington, D. C., affiliation with the Retail Merchants' Association was discussed, but definite action was postponed. The following officers were elected: Joseph M. Stoddard, president; S. A. Luttrell, vice president; Robert H. Martin, treasurer; board of directors, W. S. Keeler, H. B. Leary, Jr., and Claude E. Miller.

FORM RETAIL ASSOCIATION.

Motor Vehicle and Motorcycle Dealers at Buffalo, N. Y., Get Together to Discuss Business.

At a banquet given by the Goodyear Tire and Rubber Company, Buffalo, N. Y., recently, 175 dealers in motor vehicle accessories and supplies formed the Retail Automobile and Motorcycle Accessories Dealers' Association. The purpose of the organization is for the dealers to meet and discuss methods for overcoming business evils.

CHANGE BY-LAWS.

Portland Automobile Dealers' Association to Admit to Membership All State Dealers.

At a recent meeting of the Portland, Me., Automobile Dealers' Association the by-laws were amended so as to admit to membership dealers throughout the state, and the rapid growth of the organization is expected to result.

NEW DISTRIBUTOR.

The Isotta-Fraschini Motor Company, New York City, to Handle the Scripps-Booth Car.

The Isotta-Fraschini Motor Company, New York City, has been appointed distributor of the Scripps-Booth car for that city. The machine is the product of the Scripps-Booth Company, Detroit, Mich.

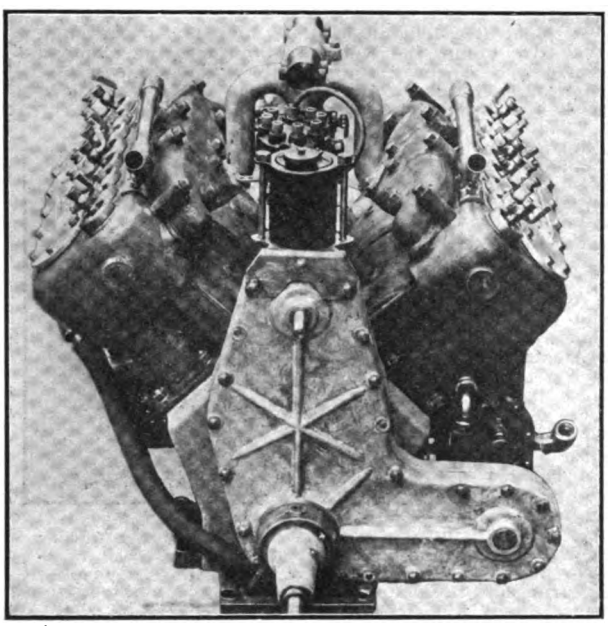
REMINGTON GREYHOUND EIGHT.

New Model Sells for $1495 and Four-Cylinder Holds to Price of $695, Fully Equipped.

The Remington Motor Company, 2 Columbus circle, New York City, took the New York automobile show by surprise when it announced an eight-cylinder model as a running mate to its popular four. The company has been experimenting with an eight for some time, and the new offering is the result of much effort and time on the part of the Remington engineers. The company has an attractive dealers' proposition and the eight-cylinder car today is a self-advertiser. At the Chicago show the company will occupy space 1, basement, and it is expected that the car will attract large crowds as it did at the recent New York exhibit.

A summary of the specifications shows that the eight-cylinders are V shape, being placed 90 degrees to each other. The water cooled motor has a bore of 3⅛ inches and a stroke of 4½, giving it a horsepower rating of 31.20, S. A. E. formula. However, the maker states that 45 horsepower can be developed with ease. The water circulation is by a centrifugal pump, driven by a silent chain, and the cellular radiator furthers cooling.

The ignition is furnished by the Atwater Kent system, and the carburetor is a Zenith. The lubrication is by splash and force feed, and the clutch is of the dry disc type with 13 plates, the alternate plates being faced with Raybestos. The bearings are of the highest grade throughout, Timken being used in the front wheels, Schaefer imported annular in the rear wheels, F. & S.



View of the New Remington Eight-Cylinder Motor, Which Was One of the Big Surprises at the New York Automobile Show.

for the transmission and Timken long series for the differential. The bearing dimensions are: Front crankshaft, 1⅝ by 2 3/32 inches; rear crankshaft, 1¾ by 4½ inches; connecting rod, 1⅝ by 2⅜, and the camshaft three bearings are cast integral with the cams.

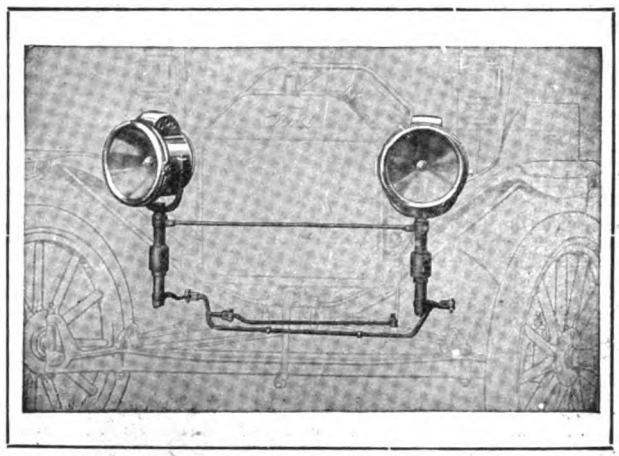
Gray & Davis furnishes the starting and lighting system, and all the lamps are lighted direct from the generator. When the motor is not running the current is supplied direct by an automatic storage battery. The springs are underslung, semi-elliptic in front and three-quarter elliptic in the rear. The front axle is drop forged, I beam, and the rear is of the full floating type. The steering gear is worm and gear, irreversible, with an 18-inch ebony steering wheel. The transmission is the selective sliding gear design, having three speeds forward and reverse. The tread is standard and the wheelbase 116 inches. The regular equipment carries wood wheels, demountable rims taking tires 35 by 4½ inches. Five wire wheels are offered at $100 additional.

LAMP CONTROL BRACKETS.

Operated by Steering Gear and Automatically Direct Rays of Light by Simple Mechanism.

The Automatic Lamp Control Company, 418 East First street, Dayton O., is manufacturing the double safety first automatic lamp control brackets shown herewith. The equipment comprises a set of lamp brackets, and operating mechanism which is made of the best material and is equipped with ball bearings.

The lamp brackets are actuated by the steering gear,



Automatic Control Lamp Brackets Attached to Car.

as may be noted by the accompanying illustration, and as is obvious the rays of the lamps are directed accordingly. The device is especially valuable in turning corners, as the lamps illuminate sections not lighted by the conventional apparatus. It is made for standard types of machines and the Ford set retails for $12. Details and prices will be supplied the trade upon request.

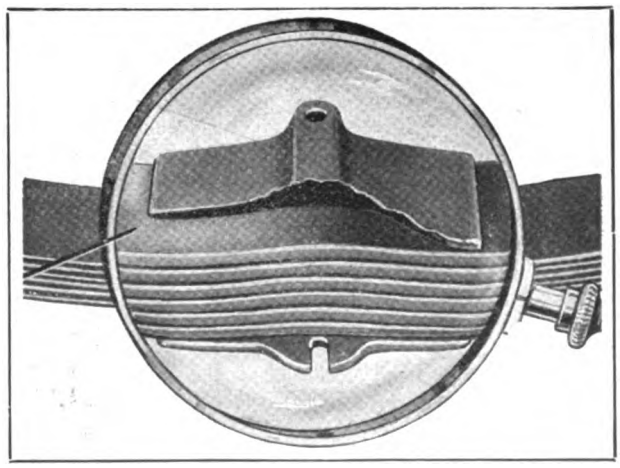
UNBREAKABLE SPRINGS.

Product of Tuthill Spring Company Sold with Unusually Broad Guarantee Against Breakage.

The dealer, garage man and repair man are frequently called upon to replace broken springs with new, and invariably the owner demands prompt service. The trade will be pleased to learn that the Tuthill Spring Company, 776 Polk street, Chicago, Ill., maker of the Tuthill Titanic unbreakable springs, carries a large stock and can make instant shipment for all makes and models of motor vehicles for which there is a general demand. This enables the garage man to obtain a spring at short notice. Special springs can be furnished at a few days' notice.

One of the desirable qualities of the Tuthill spring is that it has no bolt through its middle, as may be noted by the accompanying illustration, and because of this construction the company guarantees its product against centre breakage, as well as against defects in material and workmanship. The maker points out that the elimination of the centre bolt affords much more elasticity, as well as greatly strengthens the construction. All Tuthill springs are graphited between the leaves, and squeaking is unknown.

The profits obtained by handling the Tuthill springs are large, and the maker will supply the trade with details of its product and explain its selling plan and guarantees. A list of the springs made by this company for motor vehicles should be in the hands of every dealer,



Illustrating the Construction of the Tuthill Titanic Spring in Which the Centre Bolt Is Eliminated—The Springs Are Guaranteed Against Breakage.

garage man and repair man, as the information will be of decided value when inquiry is made for spring data, or replacements are desired.

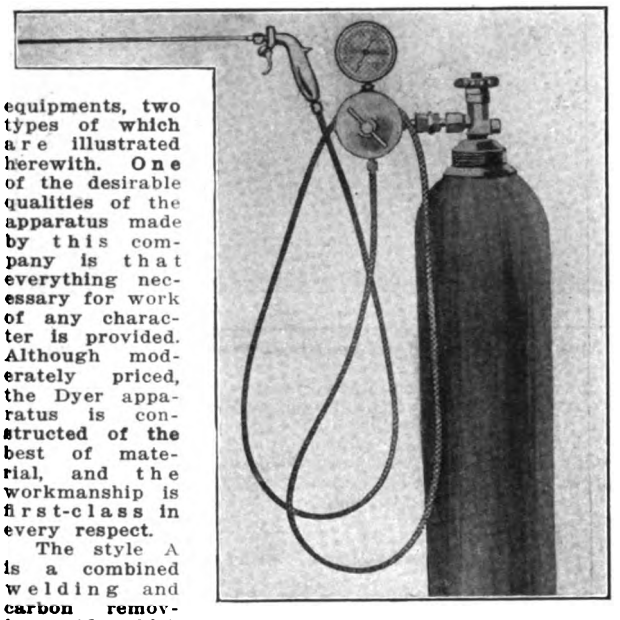
WELDING EQUIPMENTS.

Dyer Apparatus Company Producing High-Grade, Complete Outfits to Meet All Requirements.

The Dyer Apparatus Company, Cambridge, Mass., is producing a wide variety of welding and decarbonizing equipments, two types of which are illustrated herewith. One of the desirable qualities of the apparatus made by this company is that everything necessary for work of any character is provided. Although moderately priced, the Dyer apparatus is constructed of the best of material, and the workmanship is first-class in every respect.



Dyer Carbon Removing Outfit—Note the Design of Torch.

The style A is a combined welding and carbon removing outfit which is complete in every particular, and the equipment is a very profitable one for the garage and repair shop, as the range of work it will perform is practically unlimited.

The torch is designed for lightness, which is essential when operating in difficult positions such as overhead work for example, and it is so arranged that a straight tube may be inserted in place of the bent member if desired. This permits of welding at the bottom of a hole such as the inside of a cylinder. The standard torch includes six tips, ranging from the No. 3 to the No. 8, but smaller or larger ones may be utilized if desired. The No. 3 tip is adaptable to about 90 per cent. of aluminum work, and on steel up to ⅛-inch in thickness, while the No. 8 will handle the largest job, such as frames, axles, etc.

The Dyer Apparatus Company calls special attention to its regulators, stating that actual tests on a mercury column have proven their high degree of efficiency. The flow of gases is regular and steady, as the desired proportions are always maintained, assuring accurate and satisfactory results.

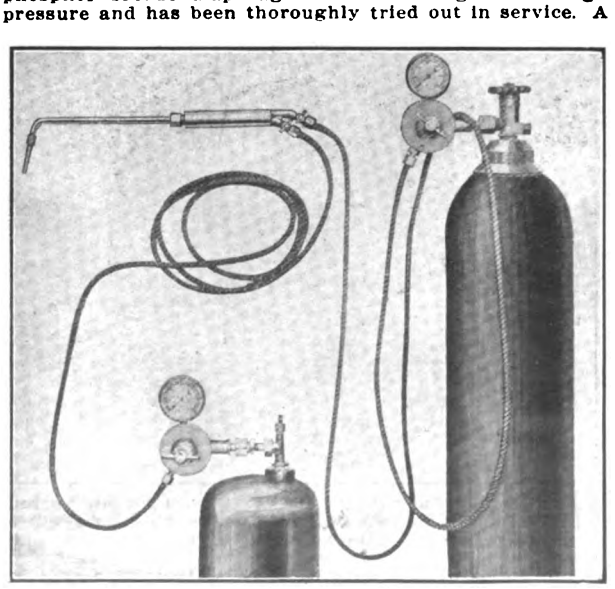
The style A carbon removing outfit shown herewith is a high-grade, popular-priced apparatus. The regulator is of the diaphragm type with a hard rubber seat and phosphor bronze diaphragm. It was designed for high pressure and has been thoroughly tried out in service. A double connection is employed at the tank end, fitting either the standard Linde tank or the ¾-inch straight thread sometimes used on oxygen tanks.

The gauge is of 150 pounds reading and has a bevel glass. The hose is the best grade, having a woven linen cover, and is tested to high pressures. Couplings are provided at either end, making for easy and rapid assembly and disassembly.

Particular attention is directed to the torch which is built for service. The drop handle maintains the hose in a natural position, preventing wear and breakage at the joint, and the trigger valve is instantaneous, enabling the shutting off of the supply of gas, or bringing it into service without using both hands. The tube is of flexible copper, a decided advantage.

The maker states that with this outfit carbon can be completely removed from a gas engine cylinder in from two to five minutes. An extra long nozzle is supplied for removing carbon from mufflers when desired.

The Dyer Apparatus Company is manufacturing an equipment which makes it possible to convert a decarbonizing apparatus into a combination outfit at a very moderate cost. Details of this outfit, as well as others produced, and trade prices, will be supplied upon addressing the company. The Dyer Apparatus Company cordially invites the trade to visit its plant, as it operates one of the largest welding shops in New England.



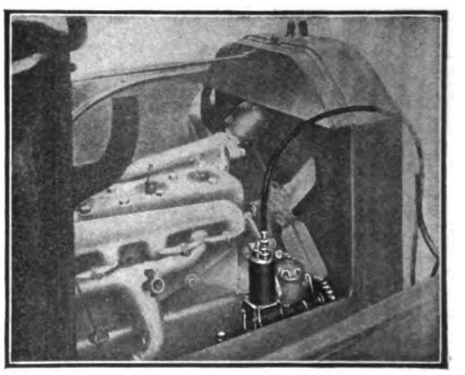
Style A Combined Welding and Decarbonizing Equipment Manufactured by the Dyer Apparatus Company.

KELLOGG FORD PUMP.

Kellogg Manufacturing Company Brings Out Engine Driven Pump Known as the Model 111.

To meet the demand of Ford owners for an engine driven tire pump, the Kellogg Manufacturing Company, Rochester, N. Y., has brought out what is known as its model 111. This is an all-metal pump and was built expressly for the model T Ford motor.

The new model is constructed with the same care and of the high-grade material that characterize the products of this company, and the design is identical with that utilized on the large motor vehicle. The cylinder is constructed of the finest grade of close grained gray iron, and the piston is fitted with ground steel rings. The crankshaft is a drop forging. All bearings, such as the connecting rod and main, are of phosphor bronze, carefully and accurately fitted. The lubrication is by the Kellogg system, which prevents any oil spray in the air conveyed to the tire.



Kellogg Power Tire Pump Installed on Ford Car.

One of the desirable qualities of the Ford model is that the pump may be fitted in 30 minutes without any alterations, drilling or machining. The company supplies a new Ford timer case, which replaces the old member, and the unit and pump may be installed without disturbing the radiator, etc. The only work involved is that of tightening two bolts after placing the gear screws on the end of the camshaft.

The gears are sturdy, and being chamfered, the pump may be placed in service with the motor operating. The rubber tubing supplied is high-grade and sufficiently long to reach any wheel of the car. A gauge is incorporated in the air line.

The Kellogg model 111 pump is guaranteed, and solves the tire problem for the Ford owner. This pump retails for $9.50 complete and affords the dealer a splendid opportunity, as the discounts are liberal. For prices and details, address the Kellogg Manufacturing Company, 272 Circle street, Rochester, N. Y.

ISSUES JOBBERS' EDITION.

National Motor Supply Company, Cleveland, O., Mailing Catalogue Describing New Specialties.

The National Motor Supply Company, Cleveland, O., manufacturer of motor vehicle specialties, announces its jobbers' edition catalogue for 1915 and copies will be mailed the trade upon addressing the home office at Cleveland.

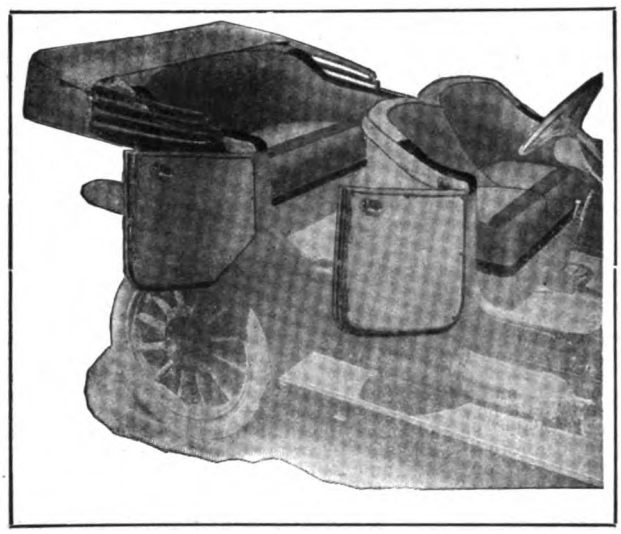
BADGER SEAT COVERS.

Wisconsin Auto Top Company Issuing New Catalogue Giving Prices and Details of Its Product.

The Wisconsin Auto Top Company, Racine, Wis., announces to the trade that its new catalogue is ready for distribution. This concern is the maker of the well



One of the Many Types of Badger Seat Covers Produced by the Wisconsin Auto Top Company.

known line of Badger seat covers, and offers a great selection of materials at attractive prices. The catalogue is most complete and every dealer, garage man and repair man should secure a copy of the book, as well as write for the trade discounts, which will be supplied upon addressing department 7.

FORD DELIVERY BODIES.

Highland Body Manufacturing Company Will Fill Order One Hour After Receipt at Factory.

The Highland Body Manufacturing Company, Cincinnati, O., which is stated to be the largest maker of service and truck bodies in the world, is specializing the production of a series of body equipment for Ford chassis that is of the highest quality and, because of the standardized types, is sold for prices that are extremely moderate. The company is securing agencies in all communities, which can be made unusually profitable by active men, because of the unlimited demand for light, fast delivery wagons, such as the Ford, Buick, Overland, and practically all other makes.

The company carries these bodies in stock, and can supply any required number at short notice, the statement being made that it can fill an order in an hour after its receipt at the factory. The bodies are designed to have extreme strength and light weight, and are of all models, adapted either for the stripped chassis or for fitting to the roadster. The bodies are interchangeable and can be used with any Ford chassis, so that they may be utilized with several machines if desired.

The bodies are both open and closed, of panel and express type, with and without canopies, with screen sides or door, and are constructed of material that insures great strength and endurance. The standard types can be equipped with fittings to meet special service requirements. The finish and trimming are excellent from every view point.

The company is perfecting its selling organization, making connections with men who can obtain business, and through its factory resources arranging to fill orders in any part of the country in very brief periods. Catalogue 15A is for dealers only.

RUSCO BRAKE LINING.

Russell Manufacturing Company Will Send Dealers' Samples, Terms and Trade Discounts.

The Russell Manufacturing Company, Middletown, Conn., maker of the Rusco brake lining, offers to send dealers' samples, price lists and trade discounts to any dealer who is interested in handling a high-class brake lining product. Rusco is made in all sizes to nine inches width and one-half inch thick. This lining is sold with the fullest guarantee for qualty, service and satisfaction. Innumerable tests have proven its high resistance to wear and its efficiency for braking, heat resisting, slow wearing, shock reducing and safety insuring value. A letter to the Middletown office will bring particulars.

UNIQUE RATCHET WRENCH.

W. B. Lane Producing a Tool for Close and Difficult Work, and It Is Sold Under Guarantee.

Will B. Lane, 180 North Dearborn street, Chicago, Ill., is manufacturing a ratchet wrench which is designed for close and difficult work and for service where the space is limited. One of the desirable qualities of the Unique wrench is that it turns nuts very close to the wall. The equipment is most complete, including as it does sockets that will not break or split, extension bar, etc., and the tool is sold under a broad guarantee. Repair men and garage men will do well to investigate the merits of the Unique equipment, as it accomplishes much work formerly performed by the cold chisel.

MOTOR VEHICLE SUPPLIES.

Chicago Automobile Supply House Is Preparing New Catalogue and Mailing Advance Supplement.

Announcement is made by the Chicago Automobile Supply House, 1353 South Michigan boulevard, Chicago, Ill., that its 1915 catalogue will be ready for distribution about April 1. The advance supplement is now being mailed to the trade and may be obtained by addressing department A of the company. Dealers desiring the complete catalogue should send in their names promptly. This will be considerably larger than in past years and in it will be listed a large number of new accessories and specialties.

HEINZE MAGNETO.

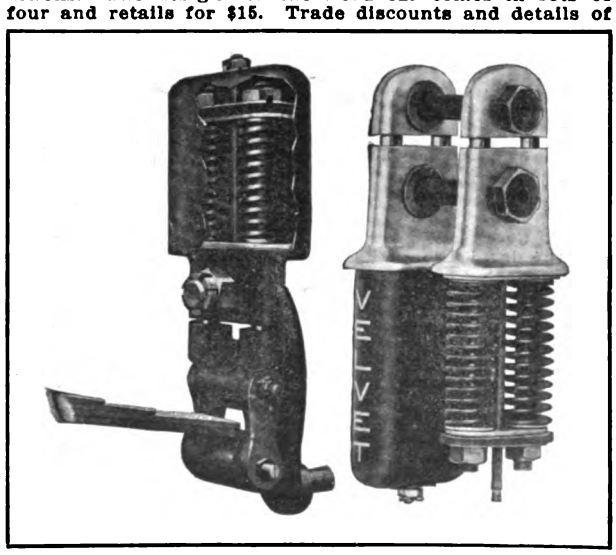
The Heinze Electric Company, Lowell, Mass., and with sales offices at Detroit, Mich., is manufacturing a new model magneto, designed expressly for small motors. Descriptive matter will be supplied upon request.

NEW VELVET ABSORBERS.

John W. Blackledge Manufacturing Company Brings Out New Design for the Model T Ford Car.

The well known Velvet shock absorbers, made by the John W. Blackledge Manufacturing Company, 2110 South Michigan avenue, Chicago, Ill., have been improved for 1915. The more important changes include a different method of fastening the covers, which prevents rattling and loss, and an extended self-lubricating sliding block.

The Velvet shock absorber for the Ford car is a new design. It has an arrangement of multiple coils and sliding rods with long, lubricated bearings, so designed as to provide maximum service and the elimination of side play. The device is equipped with a dirt and oil proof cover, and the absorber is constructed to adjust itself automatically to any load irrespective of road conditions. The design for the Ford car comes in sets of four and retails for $15. Trade discounts and details of



The 1915 Velvet Shock Absorbers Which Have Been Improved.

the 1915 line will be supplied upon request. The eastern distributor is Locke & Co., 220 West 84th street, New York City.

PERSONAL NEWS OF THE INDUSTRY.

Frank E. Smith, Indianapolis, Ind., who has been receiver of the Premier Motor Manufacturing Company, has been elected trustee of this organization. At a meeting held recently it was brought out that the company is enjoying prosperity under his administration.

Frank E. Smith, Trustee of the Premier Manufacturing Company.

R. R. Bush, Moline, Ill., formerly sales manager of the Velie Motor Vehicle Company and the Velie Engineering Company, has been promoted to the position of manager and will have charge of the entire affairs of both concerns. George H. Lloyd has succeeded Mr. Bush as sales manager.

Paul H. Bruske, Detroit, has resigned as publicity director of the Studebaker Corporation. He has become identified with the Maxwell interests on the Pacific Coast, where he will have charge of Maxwell publicity during the Panama Exposition at San Francisco.

Temple Wheeler, Fort Worth, Tex., has been appointed general manager of the Bryant Machinery Company. He was formerly district sales manager of the Chalmers Motor Company.

J. T. Hart, Chicago, Ill., has been appointed general manager of the Auto Parts Company.

C. B. Heath, Bantam, Conn., has been appointed general sales manager of the Bantam Anti-Friction Company, with headquarters at the factory.

J. H. Trumbull, Hartford, Conn., has been elected president of the Hartford Auto Parts Company, and James Carney has also been elected treasurer of that company.

David Harper, Newark, N. J., was unanimously chosen president of the recently organized Motor Truck Club of New Jersey.

F. W. Kramer, Grand Rapids, Mich., manager of the Grand Rapids Overland Company, has severed all connection with that concern in order to devote his time to other interests.

C. A. George, Detroit, Mich., has become export manager for the O. K. light delivery truck. He was formerly export sales manager of the Willys-Overland Company.

H. T. Boulden, Syracuse, N. Y., has assumed general sales management of the Chase Motor Truck Company. He will have charge of selling and, in addition, will look after all advertising.

L. I. Ris, New York City, has become affiliated with the Knight Tire and Rubber Company's branch in that city, which is located at 215 West 51st street. He was formerly travelling sales representative for the Republic Rubber Company in New York state and Connecticut.

R. W. Harris, Boston, Mass., has been appointed manager of the Ford system department of Gray & Davis, Inc.

F. George Walker, Detroit, Mich., has taken charge of the local branch of the Royal Equipment Company, Bridgeport, Conn.

W. J. Marshall, Detroit, Mich., formerly representative for the Paige car, is now associated with the Monroe Sales Company, local agent for the Chevrolet and Monroe automobiles.

H. J. Aughe, Detroit, Mich., has been elected treasurer of the Chalmers Motor Company, succeeding C. A. Pfeffer, who has been promoted to the position of assistant sales manager.

Fred H. Coxzens, Clintonville, Wis., has been made eastern and foreign sales manager for the Four-Wheel Drive Company. He will have charge of truck sales in the territory east of Pittsburg and north of Wilmington, N. C.

F. R. Humpage, Syracuse, N. Y., well known to the automobile industry because of his previous connection with the Packard Motor Car Company and the E. R Thomas Motor Company, has become general manager of the Dyneto Electric Company, manufacturer of the Dyneto electric lighting and starting system.

Edward S. Madden, Toledo, O., has become assistant treasurer of the Willys-Overland Company. He was formerly connected with the M. Rumely Company, Laporte, Ind.

Gilbert S. Loomis, Louisville, Ky., is now general manager of the Southern Motors Company. He was formerly connected with the sales division of the Packard Motor Car Company, Detroit, Mich.

William Kelly, Detroit, Mich., one of the pioneer engineers of the industry, has withdrawn from the manufacturing division to establish an office as consulting engineer in the Kresge building.

O. S. Beroth, Marion, Ind., has resigned as manager of the service department of the Rutenber Motor Company.

E. B. Finch, Detroit, Mich., has become sales manager of the Standard Motor Truck Company. He will also assist in the supervision of the company's branches.

Henry A. Kroh, Boston, Mass., has been appointed New England representative for the Continental Asbestos Corporation, with headquarters at 171 Huntington avenue.

William Shirk, Kansas City, Mo., who for many years has been with the selling force of the Winton Motor Car Company, is now connected with the local branch of the Nordyke & Marmon Company.

W. H. Bell, San Francisco, has become Pacific Coast branch manager of the Kelly-Springfield Tire Company and will have charge of the territory from Bakersfield to the British Columbia line and from the eastern border of Utah to the Coast. He was formerly connected with the Firestone Tire and Rubber Company, Akron, O.

William C. Little, Chicago, Ill., formerly with the Lozier, Rauch & Lang and Chandler companies, has been appointed Michigan representative of Brandenburg & Co., with offices in the Dime Bank building.

Sherman P. Bristow, Columbus, O., formerly connected with the Goodrich station in South America, has been transferred to the local branch of the B. F. Goodrich Company.

H. B. Shonts, St. Paul, Minn., has been appointed sales manager of Merritt J. Osborne, Inc., distributor of Overland and White cars in that city. For the past four months he had been factory representative of the Willys-Overland Company for the State of Minneapolis.

Charles J. Forbes, Cleveland, O., president of the Forbes Varnish Company, died recently.

C. D. Studebaker, New York City, has been appointed office manager of the local branch of the Firestone Tire & Rubber Company, Akron, O.

Z. F. Harshberger, Indianapolis, Ind., has been appointed manager in the State of Indiana for the H. W. Johns-Manville Company, New York City.

W. J. Ackerman, Detroit, Mich., has retired as an official of the Standard Motor Truck Company. He still retains his stock in the company, however.

R. F. Jack, Toronto, Ont., has been appointed chief engineer of the Russell Motor Car Company, Ltd. He was formerly identified with the Cadillac Motor Car Company, Detroit, Mich.

C. W. Brown, Seattle, Wash., has been appointed manager of the Firestone Tire & Rubber Company, Akron, O. He was formerly connected with the San Francisco office.

C. S. Crawford, Indianapolis, Ind., is doing some splendid work for the Cole Motor Car Company of which he is chief engineer. He has assisted the company in making some world's record tests, one of which was the 24⅛ miles covered on one gallon of gasoline with a Cole stock four-cylinder model.

C. S. Crawford, Chief Engineer of the Cole Motor Car Company.

R. T. Walsh, Detroit, Mich., has become advertising manager of the Maxwell Motor Company, Inc., of that city.

David Graham, Detroit, Mich., engineer and sales representative of the Bower Roller Bearing Company, is recovering from injuries sustained recently.

OPPORTUNITIES FOR DEALERS.

CUTS COST OF NON-FLUID OIL.

Improved Manufacturing Facilities Responsible for New Schedule of Prices.

As the result of improved manufacturing facilities and largely increased business during 1914, the New York & New Jersey Lubricant Company, New York City, has been enabled to reduce the price of its Non-Fluid oil. The company, however, has not decreased the high quality of its product, and will maintain the same standard of excellence that it has held in the industry for the past 15 years.

In speaking of this cut in price, Joseph H. Bennis, vice president of the company, says: "For over 15 years, or practically since the advent of the automobile, Non-Fluid oil has been recognized as one of the highest grade lubricants on the market. It has attracted and consistently retains the patronage of the great majority of those car owners who believe that the best lubricant is the cheapest, because it protects their car investment most surely.

"But with the great influx of medium and low-priced cars during the last few years, we have found that some owners, especially those of moderate means, 'shy' at the first cost of Non-Fluid oil. While it has the reputation of being one of the best, they do not know that it is also the cheapest in last cost, because they have never tried it.

"We are now in a position to meet this situation, and to place Non-Fluid oil within the reach of every motorist. The large volume of our sales during the past 10 years has enabled us to perfect our machinery processes to the last degree. From the assembling of the raw materials to the placing of the filled cans in the packing cases, Non-Fluid oil is now 'untouched by the hand of man'. Special machinery designed by us and built to our order, makes its production practically automatic and a continuous process".

For the dealer who is looking for a high-grade oil, it would be advantageous to get the benefit of the company's free sample offer. Write the New York & New Jersey Lubricant Company, 165 Broadway, New York City, and ask for sample cans of "K-No. 00 Special", and "K-No. 000" grades of Non-Fluid oil. Both will be sent gratis to any address.

HARRIS LINE A BIG SELLER.

Dealers Have a Live Wire Product to Handle in A. W. Harris Oils and Greases.

At the recent New York automobile show the A. W. Harris Oil Company, 326 South Water street, Providence, R. I., demonstrated the virtues of its product to a record number of dealers and car owners. This concern offers to exemplify why it considers Harris oils and greases superior, and it offers a most attractive proposition to dealers in the way of co-operation, counter and window displays, etc. These products are made of the finest Pennsylvania premium crude oil, and are refined by a special process which eliminates all carbon and soot producing elements. A letter to the company will enable the prospective dealer to get full details of all sales plans, terms and co-operative selling schemes.

POLACK'S SALES PLAN.

Progressive Company Is Making Quick Money Turn Overs for Live Truck Tire Dealers.

In keeping with its general progressive and straight forward business policy, the Polack Tyre & Rubber Company, 246 West 59th street, New York City, is doing excellent work in all its sales branches. This concern manufactures a truck tire that is guaranteed for 10,000 miles and, according to all statements made, this is invariably exceeded. For the worth-while dealer this product offers unlimited possibilities, and the ever growing number of trucks in each community, combined with the excellent sales campaigns of the Polack Company, insure a quick turn over of the money invested. A letter to the above address will receive careful attention and bring full details of any information desired.

ALDING PORCELAIN PLUGS.

The Alsten & Goulding Company Invites Dealers to Write for Terms, Etc.

The Alsten & Goulding Company, 36 Foster street, Worcester, Mass., maker of the well known Alding porcelain spark plugs, and Alding oil, has some special territory open for dealers and invites those interested to write for full details of selling plans, terms, etc. The Alding plug sells for 50 cents each, but, according to the manufacturer, they are a regular 75-cent value. The Alding oil is delivered to any address in a "duck" can for 75 cents a gallon. Both products are of high standard, and are well worth any dealer's attention.

HYATT ROLLER BEARINGS.

Give Extended Service and Run Quietly as Long as They Are Used.

Hyatt bearings are used on so great a majority of American motor cars that repairs or replacements for most makes can be obtained at short notice, and the Hyatt service stations in many cities, or the Hyatt Roller Bearing Company, Newark, N. J., will give on request full information as to all forms of bearing equipment. This product is giving long and quiet service on thousands of cars in this country and abroad, and is standard equipment on the majority of American models.

BROWN OIL BOX.

Automatically Supplies Liquid Lubricant to the Intermediate Surfaces of Leaf Springs.

The Brown Trailog Company, 6550 Carnegie avenue, Cleveland, O., is manufacturing a practical device for lubricating motor vehicle springs of the leaf type. The Brown oil box, as it is called, supplies the oil automatically to the intermediate surfaces of the springs, and not only is the device easily attached, but requires no attention other than an occasional renewal of the lubricant. The proposition to the dealer is an interesting one.

CARRIES LARGE STOCK.

Auto Parts Company, Chicago, Can Supply Motor Vehicle Parts, Accessories, Supplies, Etc.

Garages and repair shops rebuilding cars or making replacements will find that the Auto Parts Company, 737 West Jackson boulevard, Chicago, Ill., can supply about everything in the line of motors, transmissions, steering gears, axles, etc.; in fact, the company can furnish at bargain prices all motor vehicle components, accessories, supplies and equipment. A postal will bring the company's bargain sheet.

ELECTRICAL SPECIALTIES.

Mabey's Electric and Manufacturing Company Producing an Attractive Line of Devices.

A cigar lighter retailing for $1, a trouble lamp selling for $1.25 and a vulcanizing tool listing for $2.75 are among the electrical specialties produced by Mabey's Electric and Manufacturing Company, 940 North Pennsylvania street, Indianapolis, Ind., specialist in electrical devices for the motor vehicle. Descriptive matter and trade prices will be forwarded upon request.

NEW MACHINERY CATALOGUE.

Sears, Roebuck & Co., Chicago, Ill., Issuing New Book Describing Products Adapted to Garage, Etc.

Garages, repair shops and service stations in the market for lathes or any form of machinery will do well to write Sears, Roebuck & Co., Chicago, Ill., for the new catalogue 64 A 140, which will be sent free upon request. The bargain prices offered by this well established concern are too well known for further comment.

CARBURETOR DATA.

Zenith Carburetor Company, Maker of Well Known Zenith, Issuing Booklet on Carburetion.

The fundamental principles of carburetion are explained in the booklet issued by the Zenith Carburetor Company, Detroit, Mich., maker of the well known Zenith carburetor. Those interested in carburetors and their principles should write for the book, which is free for the asking.

Sell your trade a guaranteed breakless—squeakless spring

Better Quality

The Tuthill Titanic Spring has no bolt through the middle.

All springs with a bolt through the center must be clipped so tightly that they are inflexible in the center—a big disadvantage because it not only shortens the elastic surface of the spring, but the hole in the center weakens the spring at the point where the strain is greatest.

It's the old story—a battleship or a spring is no stronger than its weakest point.

The Tuthill Titanic Spring is the result of 35 years of spring building. They are guaranteed forever against center breakage—and also guaranteed against defects in material or workmanship.

Tuthill
Titanic Unbreakable
Spring

Guaranteed
Against Center Breakage

Easier Riding

Here at last is a spring which you can recommend and sell to your trade—the spring with no "comebacks."

It is easy riding—and the graphite between the leaves prevents squeaking.

The Tuthill Titanic Spring will be a profit maker for you because it is a friend maker.

Write us today—learn the truth about springs and "guarantees." Ask us to tell you how to carry a small stock of best sellers on a small investment.

We have ready for instant shipment springs for all makes and models of cars for which there is a general demand—and can furnish special springs on a few days' notice.

PERFECT LUBRICATION WITH ANY FUEL

MONOGRAM OIL

"Zoline", a new motor fuel, was officially tested at the Indianapolis Speedway Nov. 19, 1914, a Marmon touring car, with top and windshield raised and carrying four passengers, being driven 1032 miles, at a rate of 50.2 miles for 20 hours and 32 minutes, making a world's record.

MONOGRAM OIL

was the lubricant used. Examination of the motor at the end of the trial showed it was in condition to continue indefinitely.

No greater demonstration was ever made of the perfect lubricating qualities of Monogram Oil.

NEW YORK LUBRICATING OIL CO.

Consolidated with Columbia Lubricants Co. of N. Y.

"Don't Gamble With Safety!"

Brakes Lined With S-M-C Are GOOD Brakes

S-M-C Improved Brake Lining is the best that can be made. It is sold with the manufacturer's guarantee that it will satisfy every requirement, or the purchase price will be refunded.

It Is the Brake Lining For You

You are the judge,—if the lining is not satisfactory, we refund the purchase price and, in addition, 10% interest.

(IMPROVED)

Improved S-M-C Brake Lining, when quality and service are considered, is the cheapest that can be bought. When cars are equipped with S-M-C Brake Lining the highest degree of safety and efficiency is realized. The owners of cars so equipped do not take chances or "gamble" with the safety of their own, or with the lives or property of others.

S-M-C lined brakes cannot be burned, nor affected by water, oil or gasoline. They are equally efficient from first to last.

A SPECIAL LINING FOR FORD CARS

S-M-C Improved Brake Lining is standard wherever vehicles are used. There is a width and thickness for every type of brake.

There are certain and constant profits for S-M-C dealers, and satisfaction for their customers, who eliminate all their brake lining troubles.

Stop the Blinding Headlight Glare!

The law says it must be done —blinding glare is a menace to public safety. Screens simply interpose an obstacle between the light and the street —the user pays for the full power of his headlights and gets half power. The logical solution of the problem is the

Chaney Automobile Headlight Dimmer

It enables the driver to graduate the intensity of the light. It can be changed from high to low as you would turn down an oil lamp. Operated by moving the dimmer handle, it gives complete control of the headlights from the seat. In city driving the light is kept low with small current consumption—in the country where full power is needed a touch of the handle brings back the full searchlight efficiency.

This device is practical, dependable and efficient, costs little to buy and is readily installed on any car. The average car owner can place it on his car.

Dealers: At $3.50 the Chaney Dimmer is the best value in the accessory field and a fast seller. Our liberal trade terms make your margin of profit generous. You can clean up in your territory, for the dimmer is a legal necessity, and the Chaney is the best of all dimmers, and the only one sold under a ten year guarantee.

HIGHLAND DEALER'S DOLLARS BODIES FOR FORD CARS

ESTABLISH A BUSINESS WITHOUT INVESTMENT

Represent the largest commercial body building company in America, selling the most perfected vehicle equipment engineering has produced, and at prices remarkably low when quality is the measure.

There's no more fertile market than the thousands of owners of Ford Cars. The light, fast machine is almost in universal demand for delivery and general purposes.

STANDARDIZED HIGHLAND BODIES

Are built in all types, enclosed and open, to meet the demands of any service. They are designed to have great endurance, are constructed of highest grade materials, and in appearance and finish are equal to the finest special work.

Highland Body Agents have the resources of a great factory at their command, no stock is needed to do business, orders can be shipped in any number, and a customer given better, quicker and cheaper service than if he had bodies specially built. Time and money are saved and quality is guaranteed.

The Highland 1915 contract is a real asset.

HIGHLAND Bodies are interchangeable with any Ford Chassis. Can be supplied with special fittings for any service. This applies to Overland, Buick and practically all other makes and models.

DEALERS: Write today for catalogue 15 A, specifications, and details of our Agency Proposition.

Tire Savers that Save

GOODYEAR AKRON, OHIO

When you need a Tire Saver, "a hundred miles from nowhere," you want it quick, you want it right. That is where Goodyear quality serves you.

...ong the Goodyear line of twenty-...r qu... ...for tubes and ...all ...of p... ...tha...

Repair Gum that *Holds*

The automobile owner who repairs his own tires will find Goodyear Repair Gums most efficient. They come in handy rolls for use in connection with small vulcanizers.

These are made of practically pure gum, like inner tubes, so the patches will give with the tire. A patch made of inferior rubber that cannot stretch with the tube will pull loose. This is only one of the Goodyear line of twenty-two Tire Savers—the kind you can rely upon when you need them.

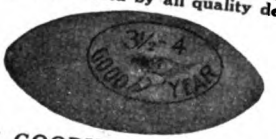
Sold by all quality dealers.

GOODYEAR AKRON, OHIO

THE GOODYEAR TIRE & RUBBER CO., Akron, Ohio (1986)
Makers of Goodyear No-Rim-Cut Automobile Tires

A Valve Patch that Stretches with the Tube

Here is a valve patch that is different. It is a Goodyear valve patch. It is made so that it will stretch with the tube, yet stays rigid around the valve stem at the base. It is made of two plies of Egyptian fabric, gum coated on either side, of the same quality of material used on Goodyear patches. The patch is feather-edged. Edges will not pull loose and curl up. Surface is roughened, so that the cement will get a firm hold. Sold by all quality dealers.



GOODYEAR AKRON, OHIO

THE GOODYEAR TIRE & RUBBER CO., Akron, Ohio (1985)
Makers of Goodyear No-Rim-Cut Automobile Tires

Big Business in Little Things

Above are shown some of the consumer advertisements on Goodyear "Tire Savers" which will appear month by month in a wide list of motor publications.

Get their selling spirit. Consider what sales-producing results will be effected by their regular appearance. Remember that back of them is all the quality-prestige of Goodyear Automobile Tires. Better accessories are not made. Confidence is won and held with the Goodyear kind.

FREE Show-Case Offer!

With various assortments of Goodyear "Tire Savers" valuable show-cases are given free. These serve as constant reminders to customers and also add to the attractiveness of every dealer's store.

The value of these show-cases runs as high as $50. Yet they go to Goodyear dealers absolutely free. The one pictured here would cost you $25, bought in the regular way. It has a wood top, three shelves, double-strength glass ends and sides, and hinged glass door. It is 62 inches high, 34¾ inches wide, 19 inches deep. It is a **beauty.**

GOODYEAR AKRON, OHIO
Accessories

Confidence Builders

Such a small thing as a tube patch or a piece of repair tape may some day hold or lose you a good customer. When "Tire Savers" are needed, they are wanted quick, and right. And, if the article you sell fails, it works to your disadvantage as much as if it had been a costly tire.

And that is why you should carry Goodyear "Tire Savers." They are confidence builders. They bring business back to you. And, nowadays, you cannot afford to slight even the smallest department of your business. The scientific way is to make the business pay everywhere and always.

Send the Coupon

Send the coupon and learn how easily you can secure magnificent show-cases that would cost you money elsewhere. Sending the coupon binds you to nothing. It will bring you information about Goodyear "Tire Savers" that will surely show you a way to add to sales, profits and prestige.

Send the coupon now. It holds a real opportunity for you.

The Goodyear Tire & Rubber Co.
AKRON, OHIO—Desk 18

SPEDOLENE

The Wonder Lubricant

SPEDOLENE DEALERS

Spedolene is sold by the trade with a guarantee that in economy, efficiency and lubricity, there is no lubricant to equal it. That Spedolene in service will give twice the mileage that can be obtained from the same volume of any other lubricant.

Spedolene is sold with a guarantee to give greater power and to increase the mileage of any vehicle. It will not gum, solidify, flow or drip, and it will retain all lubricating qualities to the last ounce. It is heat resisting and is not affected by low temperature.

It is guaranteed not to affect metal, but to penetrate between all bearing surfaces, affording positive lubricity and to carry the loads. It will cushion gears, prevent wear and all noise.

Spedolene is compounded from the highest grade asbestos and refined mineral oil. It is for all parts of a motor car except the engine.

Made in two grades—Grade S for the average machine, and Grade SS for worn and noisy gears. Sold in 5, 10, 25 and 50 lb. cans and barrels and half-barrels. Delivered under seal.

DEALERS: there is a reason for the constant and ever increasing demand for Spedolene. Every trade interest can sell it.

METZ "25"

The Quality Car

$600 Touring Model, Equipped Complete, Including Electric Starter and Electric Lights

Gray & Davis electric starter and lighting system.
Plate glass rain-vision, built-in wind shield.
Stream line body, instant one-man top.
32-inch wheels.
3½-inch Goodrich clincher tires.
Tufted upholstering, deep cushions.

108-inch wheel base, standard tread.
Left-hand drive, center control, fibre grip gearless transmission, 25 h. p. water-cooled motor, Bosch magneto, Hyatt roller bearings, speedometer, built-in gasoline gauge, full elliptic springs, signal horn, jack, tools, etc.

SELL THE METZ

And Control the Popular Price Business in Your Territory

THERE'S no getting away from the fact that the METZ is the popular car in the popular price class. The man who is looking for a strictly first class car, with complete up-to-date equipment, and at a price that he feels he can properly afford to pay, knows he has **found what he wants** when you show him this new Metz Touring Model.

In addition to its attractive price, every feature is a selling point. It is easy-riding, stylish in appearance, luxuriously finished, and simple in operation. Its equipment is equal both in **quality** and **completeness** to that of cars which are priced much higher, and its fibre grip gearless transmission does away entirely with all gear and clutch trouble.

We want representation in your territory.
Write for particulars and new catalog "F."

METZ COMPANY - - - WALTHAM, MASS.

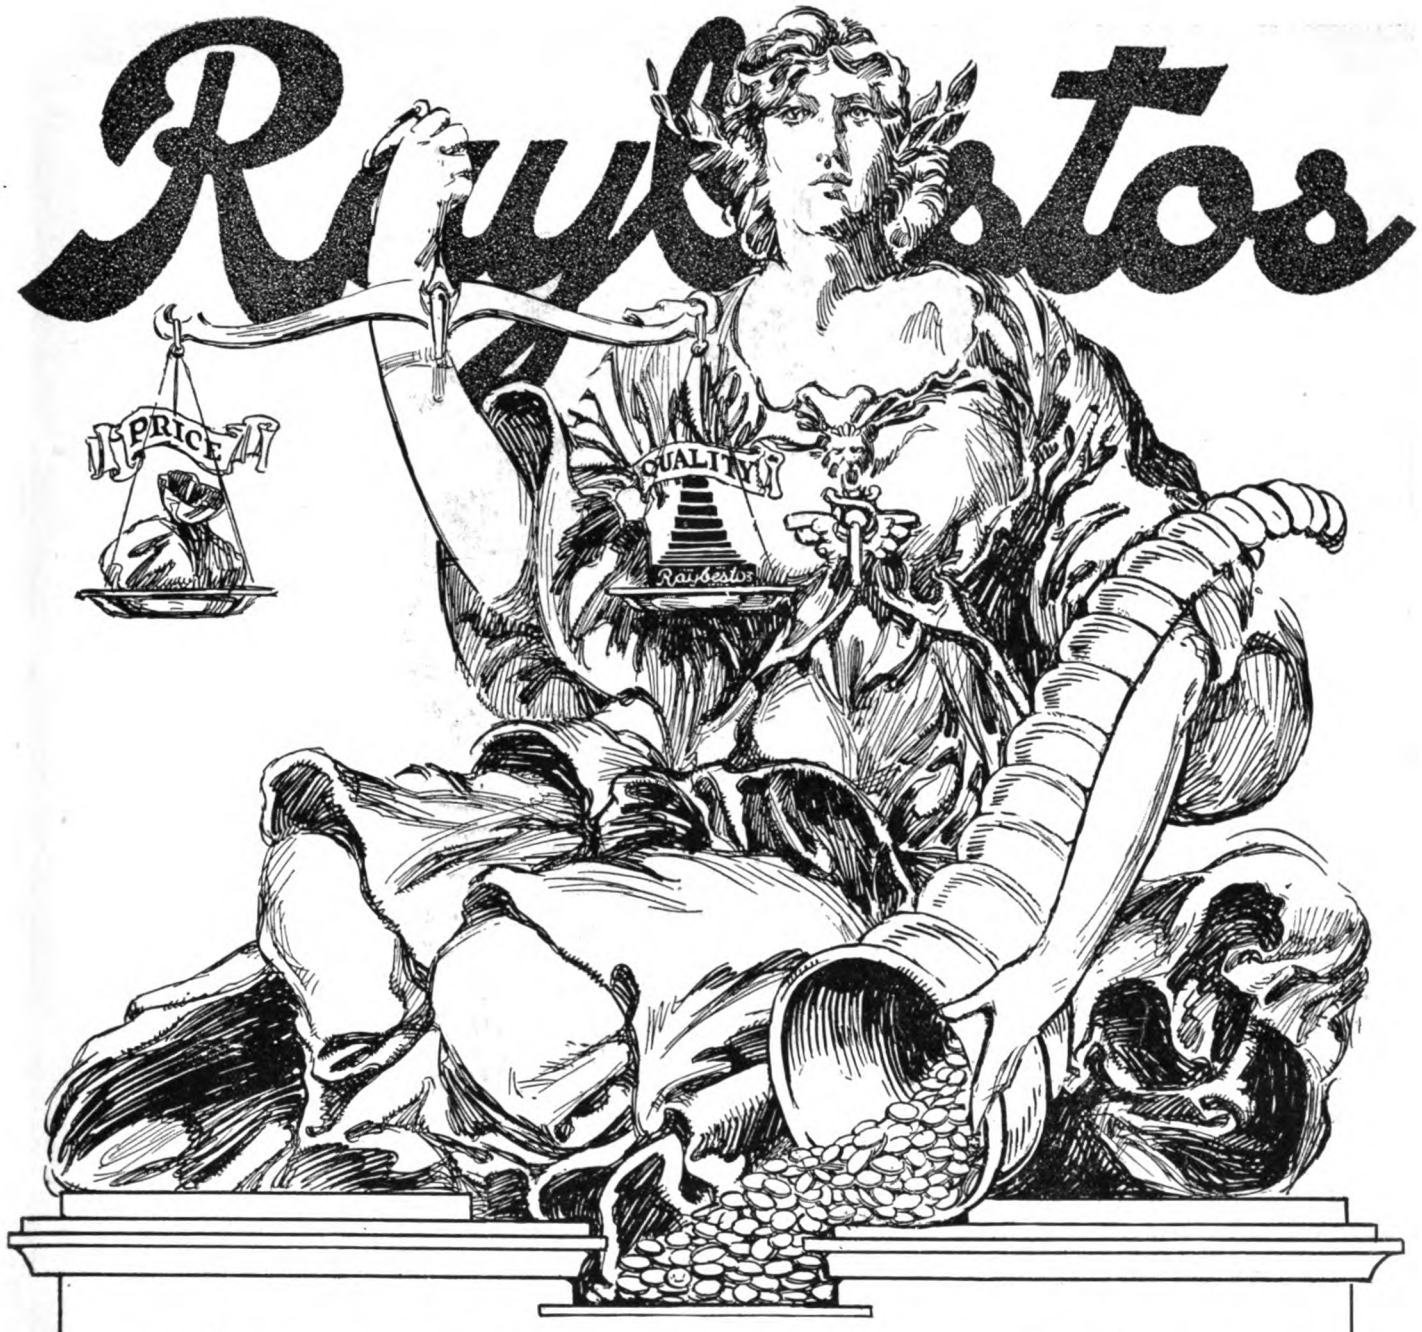
Raybestos



Price and Quality Must Balance

The quality of the brake lining you sell must be consistent with the price you charge for it, or you will not be able to hold your trade.

This is so—and nobody knows it better than you. That Price and Quality must balance is just as true with respect to net prices as it is with list prices.

What is the Quality of brake linings which list the same as RAYBESTOS, and in some cases higher, but are offered you at a lower net price?

What do you suppose is the lowest net price?

How do you know when you get it?

How long before juggled discount prices will affect you?

RAYBESTOS prices—both net and list—are fixed, the same to all—and at all times consistent with RAYBESTOS Quality.

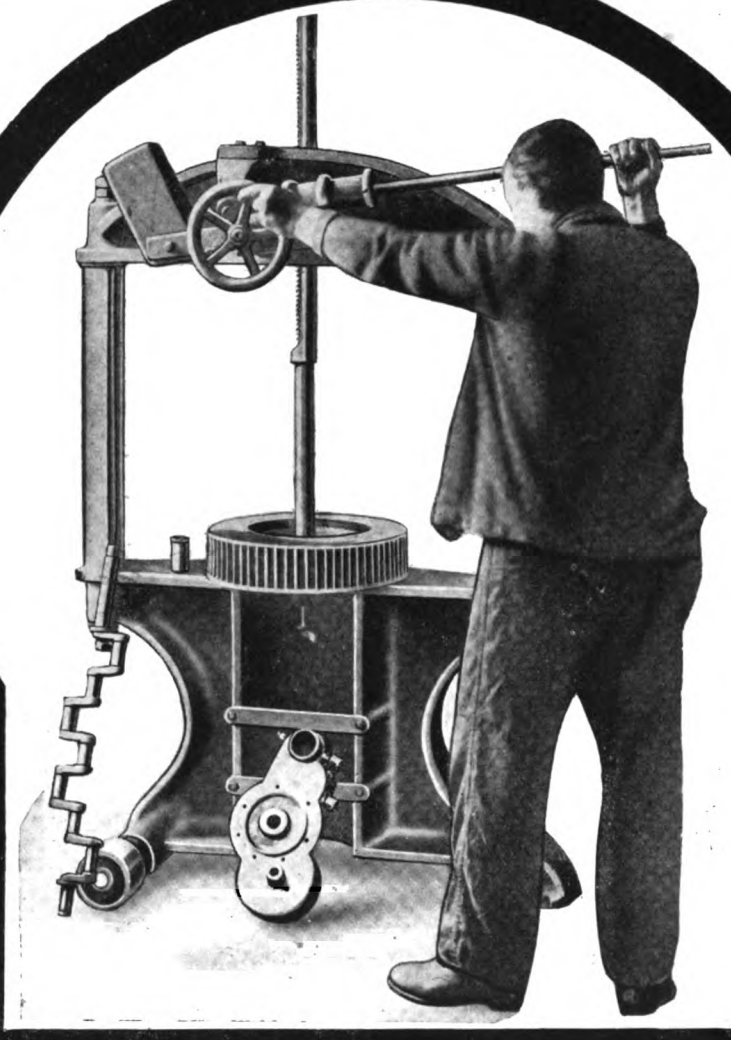
BIG JOBS PAY BEST



No. 15

NEW GREENERD ARBOR PRESS

The new No. 15 Greenerd Arbor Press; capacity, one man, 10 tons; two men, 16 tons.

The new No. 15 Greenerd Arbor Press is designed especially for service-stations, garages, repair and machine shops. The first cost is small; the utility, great.

Not too big for a small shop. A big thing for any shop.

A Greenerd Arbor Press in your shop is like a good friend. Increases in value as you become better acquainted.

Your shop is a reflection of yourself. You are a mechanic, reason truly, think accurately. To bring your shop up to your standard you need a No. 15 Greenerd Arbor Press.

Built in 16 sizes, exerting from a few pounds to forty tons pressure.

More Than 50,000 Greenerd Arbor Presses in Use.

EDWIN E. BARTLETT

322 A STREET **BOSTON, MASS.**

Digitized by Google

A Partial List of Automobile Repair Shops using the Number 15 Greenerd Arbor Press. These people, insofar as we are able to learn, run "up-to-date" shops in their locality. Don't you owe your shop a Number 15 Greenerd Arbor Press? The reason why Massachusetts has so many is because we have exhibited the Number 15 in four Automobile Shows. If you could see the press, you would have one.

Every Gasoline Station
Every Garage Owner
Every Car Dealer

Should carry Weed Chains in stock because the motoring public demands them.

For safe and successful car operation, there are three absolute necessities:

Gasoline, Oil, and Weed Chains

If you are not selling this ***third necessity*** you are missing some real profits, some comparatively easy money that your customers are willing to surrender —because they are coming to realize more and more that ***Weed Chains are the only positive safe-guard against skidding.***

If you are not selling Weed Chains, write us at once. We will put you in touch with a decidedly pleasing profit plan that you should take advantage of ***immediately.***

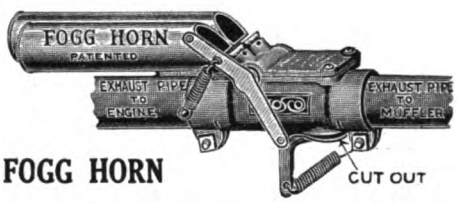
Radius Rod Anti-Rattler (2 Styles)
Steering Rod Anti-Rattler (2 Styles)



FOGG HORN

A NEW 1915 MODEL WITH CUT-OUT.

The new model is equipped with a cut-out in the body of the horn. In buying this model **you have two appliances in one:** an exhaust horn and a muffler cut-out. Furnished with two pedals—one of the locking type to hold open the cut-out when desired. Guaranteed for life of car.

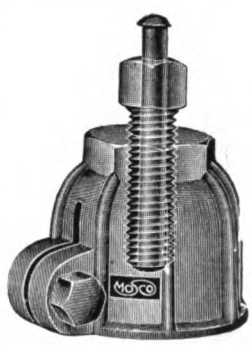
Price, With Cut-Out, $5.00. Without Cut-Out, $4.50.

MOSCO NO. 2.

Adjustable Wheel Puller for the Ford Car.

A new, exclusive feature of this model is the loose plunger extending through the center of the screw. This plunger affords a means of starting off a wheel which is stuck or "frozen" to the axle. A sharp blow with a hammer against the end of the plunger materially helps to free the wheel.

Price, $1 Each.



MOSCO BRAKE SHOE.

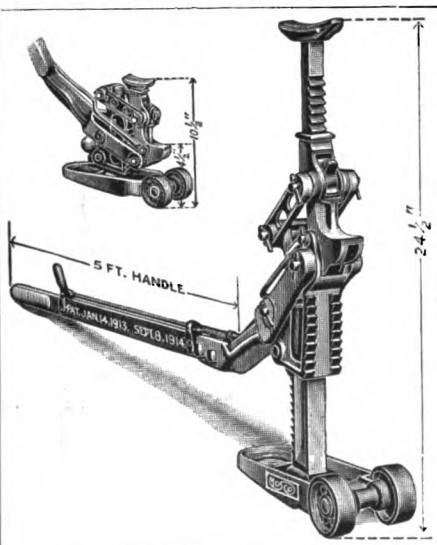
Made in one piece of best quality gray iron casting and covered with asbestos lining. These shoes grip the drums much more securely than the plain iron shoes. They are positive money savers, as the lining may be replaced for only a few cents.

Packed two in carton. Price, $1.50 per pair.

MOSCO ANTI-RATTLING BALL SOCKET, NO. 1. (Large Size.)

For radius rods of Ford Cars. Made from high-grade semi-steel. Is used for adjusting end of radius rod, terminating in a ball socket at front of transmission case. It provides a quick and easy method of taking up lost motion at this joint and eliminates rattle.

Price, 50 Cents Each.



"EXCEL" GARAGE JACK

A Heavy Powerful Tool for Rapid and Easy Handling of Large or Small Cars.

The only Jack in the world suitable for the work of Garages, Service Stations, Repair Shops, Tire Agencies, etc. This Jack weighs fifty pounds, has five foot handle with enormous leverage, and will raise either end of a car four and one-half inches with a single stroke of the handle. Range 5 inches to 26 inches from the floor.

Liberal discount to Garages and Dealers

Price, East Mississippi River, $16.00
Price, West Mississippi River, $18.00

MOSCO

Anti-Rattling Ball Sockets for Radius Rods and Steering Rods of Ford Cars.

Equipped with Compression Grease Cups.

Radius Rod Anti-Rattler, Price, 75 Cents.

Steering Rod Anti-Rattler, Price, 60 Cents.

Federal Service Is Extra Service

USERS of Federal Tires enjoy so many advantages that instinctively they think of Federals as the tires of extra service. And back of the tires they find the Federal Company, through its branches and distributors and dealers, ever ready to meet them, more than half-way, with the spirit of fair dealing.

It is easy for us to *stand back of*

The Exclusive Federal *Double-Cable-Base Tires*

("Rugged" and Plain Treads)

for Federal Tires are not only made of pure para rubber and best quality "square" woven fabric, but Double-Cable-Base construction *eliminates* the four common and costly tire troubles:—rim-cutting, tube-pinching, side-wall blow-outs just above the rim and the danger of tires slipping from their rims. Federal users do not experience these annoyances and items of expense.

Genuine Protection Against Skidding

The Federal "Rugged" Tread is scientifically designed to safe-guard your car from skidding, *and it does* From every angle, the big round projections grip the slippery roadway *tenaciously*

Double-Cable-Base Tires are made in all styles and sizes

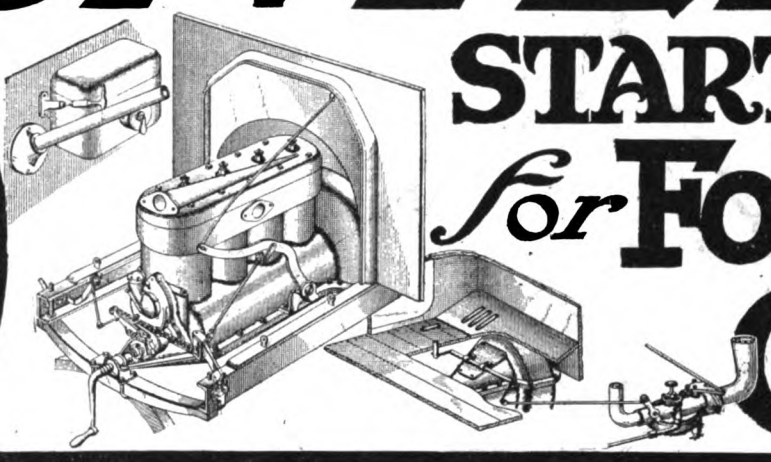
HUNTER

$10 STARTER for FORD CARS

F.O.B. CHICAGO



Makes Every Ford An Ideal Car For Every Purpose

A Positive Mechanical Starter That Can Be Operated from the Seat by a Woman or Child.

An equipment that will make a Ford the equal of any car for convenience and motoring satisfaction, and sold at a price within the reach of every Ford owner.

Simple in construction, every part of great strength and always fully accessible, it requires no adjusting or attention after installation and connection. Starting the motor is by simply drawing a handle from the dash toward the seat, then releasing it to be withdrawn by spring pressure. Compound leverage insures a start with a slight effort.

With an attachment to close the air intake of the carburetor by foot pedal when ready, the engine can be started in lowest temperature. This efficiency is guaranteed.

OWNER CAN INSTALL IT

The Hunter starter can be installed by an owner in an hour's time. Replacing four bolts with other bolts supplied with the starter and placing the nickel plated bracket and handle on the dash. One hole to be bored in the dash and the bracket attached by screws. The starting crank is retained and the entire system is under the hood.

Dealers: At $10. a guaranteed Starter should go on a big percentage of cars in your territory. Write us.

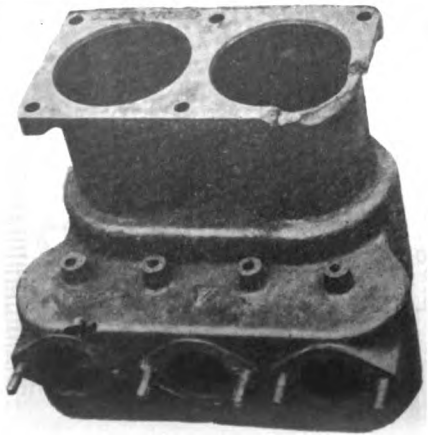
1907 WATERHOUSE 1915
FREE TRIAL OFFER

Free Trial Offer

If at the end of two weeks' trial in your shop, you decide you do not want the outfit, ship it back to us and we will refund your money **in full.** No strings to this offer. Not necessary to give any reasons.



Why a WATERHOUSE gives you the most for your money

1. Only equipment made that has a NON-FLASHING torch.

2. Burns equal amounts of acetylene and oxygen, thus giving the hottest flame at the lowest possible cost.

3. Guaranteed by a concern who are willing to make a guarantee and are capable of standing behind it.

4. Sold on terms to prove its superiority. Free trial offer.

5. Order a WATERHOUSE and try it in your own shop, on our free trial offer and see for yourself its superiority. It will show you what it will do. If it can be done a WATERHOUSE will do it best.

MR. GARAGEMAN! This is the class of work that can be done with the WATERHOUSE Equipment. It saved many dollars in this case. Give it a chance to make and save for you.

TERMS:

5% discount cash with order or C. O. D. OR $20.00 cash with order, balance in two payments, first of $12.00 in 30 days, $10.00 in 60 days, AFTER RECEIPT OF OUTFIT BY YOU.

(When Writing to Advertisers, Please Mention the Accessory and Garage Journal.)

The Waterhouse Outfit

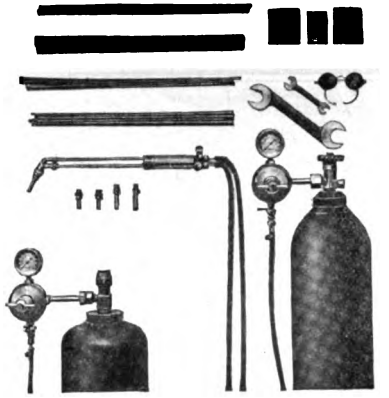
	Value
1 B Welding Torch with 5 tips	$17.00
1 Oxygen Reducing Valve with 50-lb. line pressure gauge	10.25
1 Acetylene Reducing Valve with 50-lb. line pressure gauge	11.00
1 Set of Special Welding Hose (20 ft.)	3.00
1 Pair Welding Glasses	.75
1 Carbon Burning Torch	Free
1 Set Instructions	Free
Net Cost Complete	**$42.00**

If you have a regulator for carbon burning, the oxygen regulator with the outfit is unnecessary, and you can deduct the price ($10.25), from the above total price.

TERMS: 5% discount cash with order or C. O. D. OR $20.00 cash with order, balance in two payments, first of $12 in 30 days, $10 in 60 days, AFTER RECEIPT OF OUTFIT BY YOU.

If supplies are desired as well, we will sell for $4.50 additional the following, making you ready for any auto welding:

1 Bottle Aluminum Flux
1 Can Cast Iron Flux
1 Can Copper and Brass Flux
2 pounds Brass Welding Rods
5 pounds Cast Iron Welding Rods
2 pounds Aluminum Welding Rods
2 pounds of Steel Welding Rods



Waterhouse users can secure free tank service.

Our information bureau is always at your disposal.

Remember

The WATERHOUSE is:

1. **NON-FLASHING**
2. **Gas Saving**
3. **Guaranteed**

The early bird gets the worm. The first owner of a WATERHOUSE WELDING EQUIPMENT in your community will make the most money. Build up a big welding business before the other fellow wakes up.

The WATERHOUSE

Equipment makes money in thousands of shops. Let it make money for you.

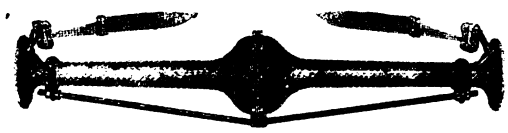
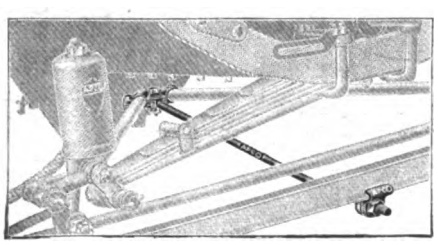
NEW FORD SPECIALTIES
AT THE BOSTON SHOW
SPACE 556 MAIN BALCONY

APCO Rear Axle Truss



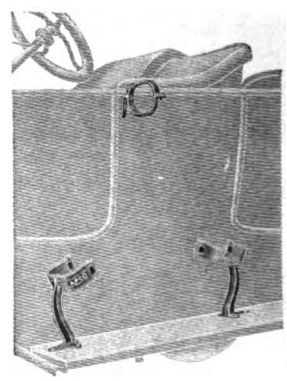
The rear axle on the 1915 Ford car has been strengthened about 50% over any previous type, and this is not the first year that improvements have been made on this unit. To strengthen the old cars, we offer the APCO truss, which is made from steel rods and semi-steel castings finished in black enamel. The rods are ½-inch in diameter and strong enough to give the axle the stiffness lacking in its original construction. The clamps go around the castings at the extreme end of axle housing, and do not put any strain on the pressed steel parts. The cradle that fits under the center of housing is fitted with square sockets to accommodate the square heads that are made integral with rods. Bolts for clamps are square headed, sunk flush in square sockets to prevent turning and to improve appearance. The whole outfit comes packed in a corrugated box 24" long and weighs 5½ pounds. If your axle housing leaks grease or your rear gears are noisy, you need an APCO truss to remedy the trouble. If not, you need the truss to prevent it. Installation is a matter of 10 minutes with no tools, but a wrench. Price complete, $1.50.

APCO Front Axle Brace



The front Radius rod on the Ford is made of a tubing in which there is more or less spring or give. This give causes the bottom of the front axle to tip or bend back in going over rough roads, causing an unsteadiness in steering. The APCO Brace consists of two ingenious clamps and a half-inch steel rod with a square head made integral. One of the clamps is attached to the extreme end of the front axle truss rod with three bolts, all having square heads to prevent turning, and the square head on the rod is held in this clamp. The other clamp is attached to the front axle and is held there by two nuts on the rod which goes through the clamp. This device is one of the best accessories we have ever offered and it is one that you need. Finished in black enamel. Can be put on the car with a wrench in five minutes. Packed in corrugated box 24" long, weighs three pounds, and there is no need of adding 20 pounds to the weight and $5 to the cost of your car when ours will do the work. A new radius rod costs $3.00. You will never need a new one if your car is equipped with an APCO Brace. Price complete, $1.50.

APCO Side Tire Holders



There are so many new rear tire holders on the market that the public is inclined to overlook the good points in favor of a side tire carrier. Absolutely the only advantage of having the tires on the back of the car is that of balance, and as a pair of shoes weighs but 20 pounds, this is purely an imaginary one. There are hundreds of reasons, however, why you should use APCO Side Tire Holders, and the following are a few, any one of which is sufficient for you to decide in their favor.

1.—They keep the tires clean. 2.—They keep the tires away from the hot exhaust. 3.—The tires can be removed in five seconds and replaced in the same time. 4.—They cannot be lost off the car. 5.—They are much neater in appearance. 6.—They can be installed in 10 minutes. 7.—With them it is possible to carry a trunk at the rear. 8.—They make unnecessary the changing of tail light location. 9.—They weigh seven pounds less than the lightest rear holder on the market. 10.—There are no straps to lose or break. 11.—Price is the lowest of any tire holder on the market, irrespective of advantages. 12.—Special catch on top bracket locks automatically when closed and lock need not be used unless wanted. 13.—Screws that hold bracket to body cannot be removed with tires in place. 14.—Lock is solid brass mail type, which opens automatically when key is turned. 15.—Lock clasp is rubber covered to prevent rattle.

Furnished in black enamel only. Packed in corrugated carton 6x11x7½ and weighs seven pounds. Complete with bolts and lock. Will fit two 3½" tires or one 3" and one 3½". Price, $2.00.

APCO Spring Leaf Lubricators

One concern selling an oiling or lubricating device for the leaves of automobile springs spent $20,000 advertising their product during the year. Another spring maker makes great claims for his springs because they are self-lubricating. There is no question about the advantages of having the springs well oiled. It's only a question of the means. The APCO Lubricators as shown in the cut consist of a pair of plates with oil reservoirs and felt inserts. These inserts soaked with oil rest against the sides of the spring leaves and give the constant lubrication which increases the riding qualities 100%. They are made from semi-steel, black enamelled and are guaranteed to do the work as well as the highest priced article on the market. Set includes four pairs, two pairs for each spring. The only ones on the market that oil both sides of the spring. Price complete in a box, $2.00.

The APCO Line is for sale by every jobber and garage in New England that considers satisfied customers an asset. There always will be imitators and the fact that they all claim "just as good as APCO" is proof enough that APCO is the best. Why not get it when it costs you no more? Our complete new catalog will be out March 10th. Ask *your* jobber for one, if he is alive he will get it quick.

MULTIBESTOS REG.U.S.PAT.OFF. PAT.APPD.FOR

An Outward Expression *of* Inward Worth

Honesty and sincerity are woven into the very warp and woof of MULTIBESTOS Brake Lining. In making it complete in our own factory we are mindful of the important work it has to do when finished and in actual use.

To us it is serious business—this manufacturing of an article upon which the safety of thousands of our fellow men depends.

It is so easy to be mislead in the purchase of brake lining; so many have the same outward appearance, that we are now marking MULTIBESTOS with "White Foot Prints", or plain white lines which run across the fabric at intervals of exactly one foot.

Not only do these "White Foot Prints", protect MULTIBESTOS users; they also afford a great saving of time and inconvenience to the men in the trade who are handling it, for the marks are spaced exactly and can be used for measurement.

So, look for the "White Foot Prints"—the outward expression of true worth in brake lining.

THE ACCESSORY -AND- GARAGE JOURNAL

Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. IV. PAWTUCKET, R. I., FEBRUARY, 1915. No. 10.

WONDERFUL BUSINESS PROMISED FOR 1915.

From the Prospect of Production, Value and Sales, the Automobile Industry of the United States Will Surpass All Previous Records.

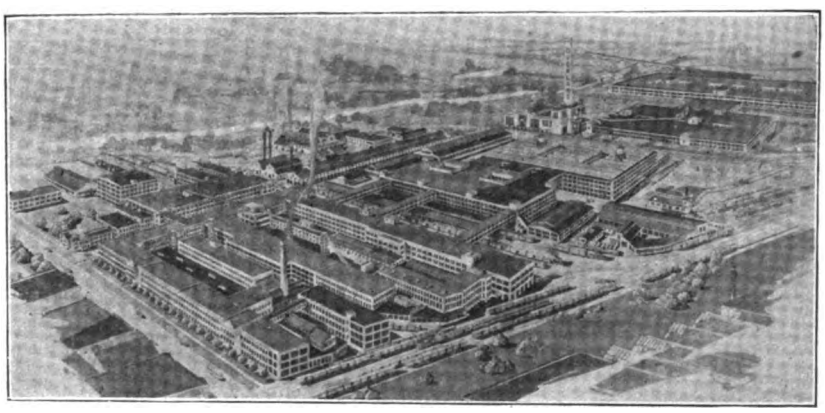
THE motor vehicle and accessory dealers and the garage men will profit from the prosperity that will undoubtedy be experienced throughout the country during 1915. Production of more cars will directly benefit both the automobile and the accessory dealers, and the garage and repair men will later realize substantial profits. That 1915 will be the most productive in the history of the industry is evidenced by unmistakable figures. From the standpoint of the manufacturer, the production and value of cars, the domestic consumption and the total amount of investment will exceed any previous year. Estimate is made that the total number of pleasure and commercial cars produced will reach 750,000 in 1915, with value of approximately $700,000,000, and this will exceed the production number and valuation total yet of record.

During the closing months of 1914 the automobile industry was materially affected by many conditions, chief of which were: (1) The European war; (2) the admitted general business depression in this country, and (3) the stagnation of commercial affairs in the South as the result of the cessation of cotton buying abroad. While the financial conditions were threatening, business has largely adjusted itself, and there is no reason for apprehension that there will be material influence upon the automobile industry. Considering these factors in the order stated, it is seen that the European conflict has caused a cessation of pleasure car exports but, since the beginning of the war, the export of approximately 5000 commercial vehicles will more than make up the loss. War orders have kept the factories running day and night, and enabled the manufacturers to dispose of all surplus vehicles and turn them into cash at a time when cash was needed. Likewise, it has added to the army of workers in the export trade, while the domestic consumption will more than take care of itself.

The exceptional prosperity of the Middle West agricultural communities on account of the record crop values, and the establishment of the federal reserve, is rapidly relieving the financial stringency. Record crops and the favorable disposition of the farmer towards the motor car will provide means for domestic sales, and without a doubt 1915 will far exceed the past year in this respect. Over 50,000 of the 106,250 automobiles in Iowa and over 33 per cent. of the 53,161 machines in Wisconsin are owned by farmers. The era of good roads making that has followed the automobile has enabled the farmer to reduce the haulage cost of his products, with the result that larger profits have been realized by the tillers of the soil during the past few years. Just what this will mean to the automobile industry will be better appreciated when it is stated that there are 12,500,000 people engaged in agriculture in this country today.

Always first to relieve financial distress, the automobile trade came to the front in the South's cotton crisis, and the generous action of the motor car manufacturers in the "buy a bale" movement materially helped to alleviate conditions. This, together with the action of nearly every trade interest and individual effort, has carried the South over its critical period.

Added to this is the optimistic note throughout New England of the textile mills working full blast. The orders received from abroad are causing this industry to more than make up for the depression of 1914, and as the cotton industry constitutes the backbone of New England, it is evident that a new era of prosperity is due for this section also.



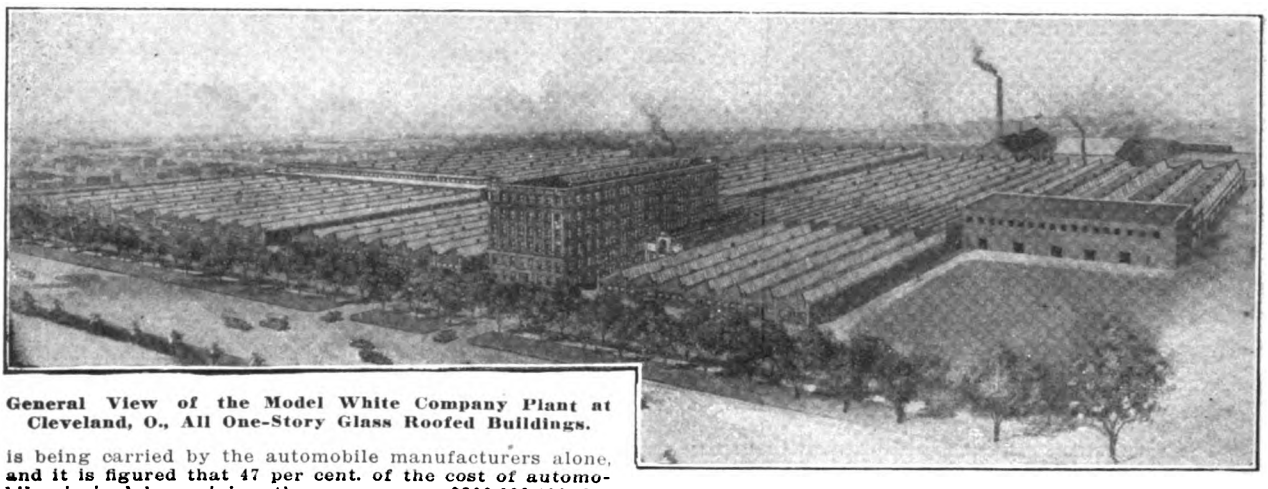
The Mammoth Willys-Overland Plant at Toledo, O., Where 75,000 Overlands Will Be Turned Out in 1915.

Never since its establishment in the latter years of the 19th century has the progress of the automobile industry received a setback. Each successive year sees larger production, larger investment in plant and equipment and, above all larger payrolls for the army of the workers that constitute its backbone.

Country's Greatest Industry.

Characterized today as the country's greatest asset, the automobile has become a necessity and has securely intrenched itself in the social and commercial life of the country. While the motor car industry proper has become the support of hundreds of thousands, it has carried an army of accessory and supply industries with it that are successfully and soundly capitalized into the billions. The 1,808,441 automobiles in the United States, valued at approximately $2,000,000,000, turned $11,925,245 into the coffers of the various state treasury departments during 1914. These automobiles caused 9,000,000 tires to be produced, valued at $300,000,000, and this alone gave work to thousands, besides making a profit and giving additional employment in the shops of the 15,500 dealers. Likewise, the 13,630 garages, 1280 repair shops and the 680 supply houses were carried on the flood of the automobile prosperity, and some 200,000 clocks are now being turned out for use in automobiles, not to mention the leather concerns who are supplying the hides of millions of cattle for use in motor car manufacture. A constant payroll, including over 250,000 men,

Digitized by Google



General View of the Model White Company Plant at Cleveland, O., All One-Story Glass Roofed Buildings.

is being carried by the automobile manufacturers alone, and it is figured that 47 per cent. of the cost of automobiles is in labor, giving these men over $300,000,000 for 1915.

From the outline given above it is seen that financially the United States is righting itself and the market for automobiles is receiving an impetus as the result. Figures convincingly tell the story of the way in which the automobile has become a leading factor in American life. A brief summary of the growth of the industry since 1900 shows:

	1914	1910	1900
Number of manufacturers	450	350	15
Production of cars	515,000	130,000	4,000
Value of cars	$485,000,000	$250,000,000	$5,000,000
Domestic consumption	450,000,000	238,800,000	4,850,000
Exports of cars	33,000,000	11,200,000	150,000

Another striking example that is graphically denoted in figures may be seen from the following comparison, showing how American manufacturers have climbed from $5,502,214 exports in 1907 to $33,198,806 in 1914.

	Exports of Cars	Imports of Cars
1907	$5,502,241	$4,842,279
1908	5,277,847	2,991,039
1909	5,992,200	3,679,134
1910	11,190,220	3,837,084
1911	15,509,229	2,250,759
1912	25,657,294	2,438,325
1913	31,253,533	2,023,207
1914	33,198,806	1,432,576

This wonderful record is undoubtedly due to the development of the low-priced car in America. A steady decline in the average price is one of the feature accomplishments of the American industry, which has been made possible by the wonderful quantity production. The price of the average car is placed at about $980 today, as compared with $2130 in 1907, and at the present time more than 50 per cent. of the cars produced sell for less than $700.

What is perhaps the greatest optimistic note of 1915, is the confidence that the public is placing in the automobile industry, i. e., speaking from the financial standpoint as well as that of buying. The automobile consolidations that have been formed are paying large dividends and are firmly intrenched in the financial world, having the highest standing and best of rating. An analysis of the terms and conditions underlying the securities bring forth some interesting results, and such that cause investors to give every consideration to these investments.

Growth of the Ford Company.

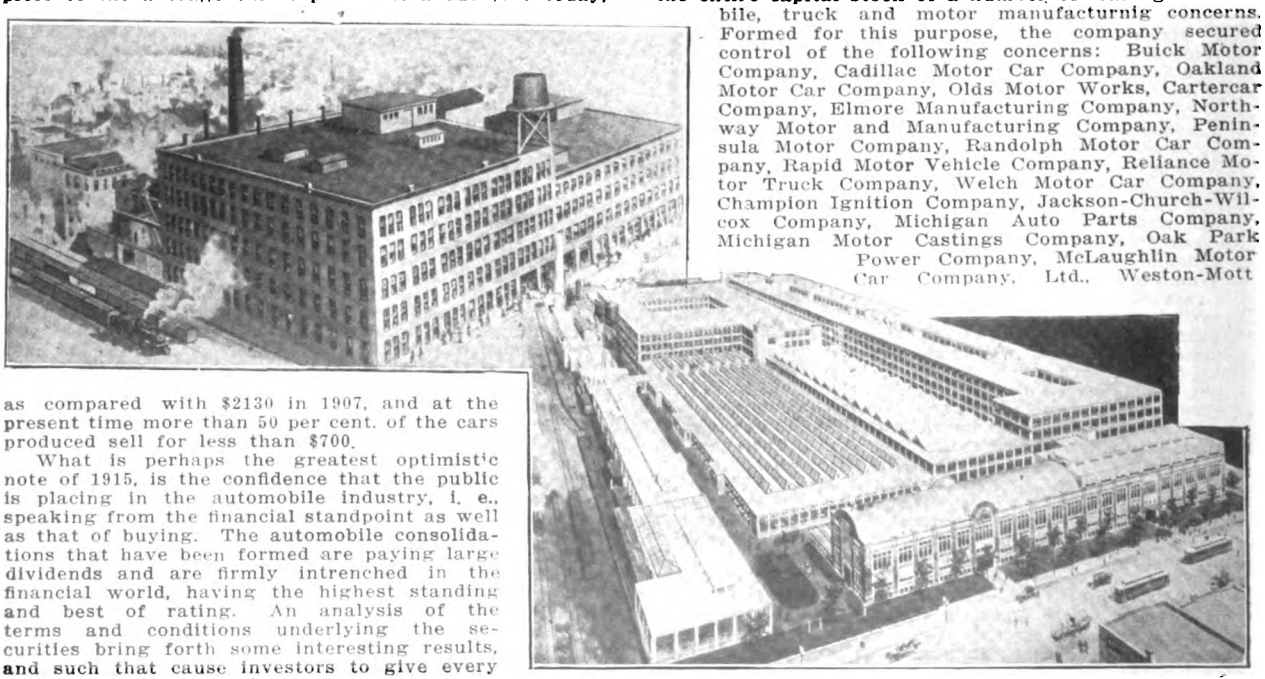
Without a doubt the greatest example of industrial honesty in the history of the world is being set by the Ford Motor Company, Detroit, Mich. Giving a dollar-for-dollar value, and maintaining working conditions that was a dream of Bellamy 25 years ago, the eyes of the whole world are focussed on Henry Ford. Starting June 16, 1903, with $100,000 capital, 311 employees, a factory space of a trifle over a quarter of an acre, and an output of 1708 cars for the first year, the Ford Company has climbed to dizzy heights. But throughout the years of wonderful production, this concern has shunned over-capitalization, and today it holds a place in the financial world that undoubtedly has never been equalled by any other compnay in any industry.

With a total capitalization of $2,000,000, it earned a gross of between $80,0000,000 and $90,000,000 last year, of which $25,000,000 was surplus. The company's output for 1915 will be in excess of 300,000 cars, and the present capacity of the plant is approximately 2000 cars a day, or 600,000 a year. The Ford factory, Ford, Ont., Canada, has a capacity of 35,000 cars annually. This company is capitalized at $1,000,000 and its stock is quoted at $450 a share. The Ford plant at Manchester, England, contributes another 15,000 cars to the annual output. Mr. Ford pays a minimum wage of $5 a day and divides $10,000,000 annually among his employees, "not in the sense of a gift, but because they earn it".

Earnings of the General Motors Company.

With earnings of $170,977,223 for the past two years, the General Motors Company, New York City, may be termed a huge success in every respect. For 1913 its gross was $85,603,920, and for 1914 it showed a total earning capacity of $85,373,303. The decrease was due, of course, to the general disturbed financial conditions, but despite this the company increased its working capital over $1,000,000, having $24,331,333 for this purpose.

By way of explanation it should be pointed out that the General Motors is a holding company, having acquired the entire capital stock of a number of leading automobile, truck and motor manufacturnig concerns. Formed for this purpose, the company secured control of the following concerns: Buick Motor Company, Cadillac Motor Car Company, Oakland Motor Car Company, Olds Motor Works, Cartercar Company, Elmore Manufacturing Company, Northway Motor and Manufacturing Company, Peninsula Motor Company, Randolph Motor Car Company, Rapid Motor Vehicle Company, Reliance Motor Truck Company, Welch Motor Car Company, Champion Ignition Company, Jackson-Church-Wilcox Company, Michigan Auto Parts Company, Michigan Motor Castings Company, Oak Park Power Company, McLaughlin Motor Car Company, Ltd., Weston-Mott



In the Upper Photograph the Factory Where the First Pierce-Arrow Cars Were Constructed Is Shown, and in the Lower Picture the Present Plant of That Company Is to be Seen.

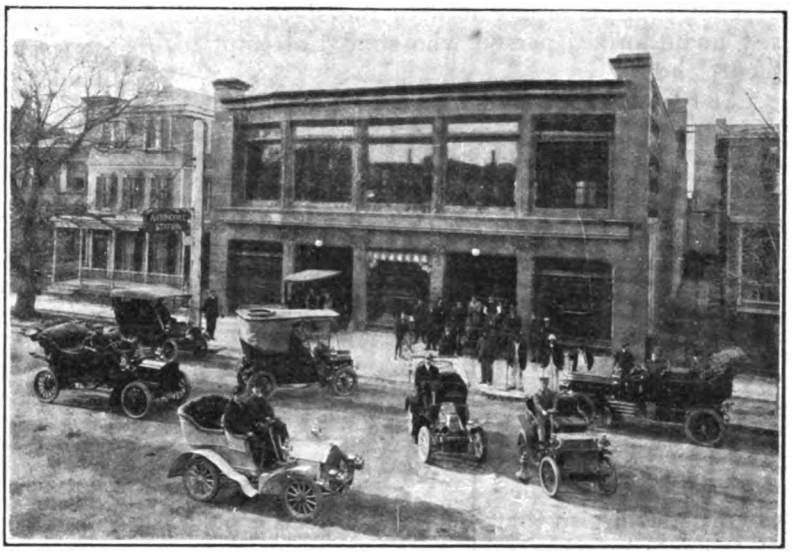
GARAGE ECONOMIES FROM ACCOUNTING.

Record System Developed for the General Service Station of the Atlantic Automobile Company, Atlantic City, N. J., Which Has an Established Local Patronage and Does a Large Business with Transients.

TO INSURE success in operating a garage or repair shop, as in any other business, it is of the utmost importance that it be conducted on strictly systematic and business-like principles. By developing or adopting a suitable system, by which it becomes an easy and simple matter to keep a check on all receipts and expenditures, there is no doubt that the average garage or repair shop business can be made to yield a substantial profit. But it is necessary that careful attention be given to even minute details, so that any leak, however small, may be promptly discovered and effectually remedied, and a workable system, strictly adhered to, should prove of invaluable assistance. It should be of such a nature, moreover, as to impress the patron with the idea that his interests are being protected to the fullest possible extent, and his needs properly attended to. There should not be too much red tape to mystify or antagonize the customer, but it should be so simple that he may readily apprehend the details of that part with which he is required to come in touch.

A business which presents a number of interesting features, and to a large extent exemplifies the foregoing principles, is that conducted as the Atlantic Automobile Company, Atlantic City, N. J., by F. A. Brodhead, G. F. Currie and G. W. Meredith, who have been in the garage field for a number of years and which, by close study of the needs of its patrons has built up a service which has afforded splendid satisfaction.



Front View of the Atlantic Automobile Company, Atlantic City, N. J.

The garage proper is situated on North Carolina avenue, between Atlantic and Pacific avenues, and has a frontage of 65 feet and a depth of 150 feet, containing 19,500 square feet of floor space. The building was designed and built especially for the company and is constructed along the most up-to-date lines. It was the first reinforced steel and concrete building erected in that city. The garage is lighted throughout by electricity, is heated by hot water and is equipped with an air compressor, the company maintaining its own plant for operating these.

In the rear of the garage are two wash paves, on each of which two cars may be washed at a time, affording quick service. An elevator of four tons' capacity connects with the second floor. Since the garage is open day and night, it is necessary to have competent help in attendance at all hours and only capable men are employed. The garage is open every day in the year. One man is employed solely for the purpose of cleaning the floor of the garage, as the company has found that a clean garage makes a good impression. As soon as any oil or dirt collects under a car it is promptly removed and a drip pan placed to receive whatever oil may afterward drip. An idea of the plan adopted for handling its business will be gained from the following:

As a car enters the garage it is tagged with a manila tag, shown at Fig. 1, which measures 6¼ by 3¼ inches. This tag is perforated, dividing it in three sections. In the upper part is entered a serial number, the date, whether the car is to be washed and polished, also what other work may be found necessary. The middle portion of this tag bears the same serial number, together with the date, the owner's name and address, the make of car, car number, and the exact number of lamps and spare tires carried on the machine. Notation is also made if the car is to be washed and polished. The lower part has the same serial number and the make of car as well as the registration number of the machine. This tag is made out by the man in charge of the floor with the exception that the name and address is filled in by the owner of the car. The string end of this tag is tied to the car, the middle part is sent to the office to be filed and from which the patron's bill is made out, and the small check at the bottom of the tag is given to the customer as a receipt for his car, it being necessary for the owner to present this receipt in order to secure his car. It

is further required that the owner sign his name on the tag, so that the garage management will be enabled to compare it with the signature of any unauthorized person who should attempt to secure the car.

At Fig. 4 is shown the daily charge slip which is made out in duplicate and printed on paper, five by 3½ inches. Spaces are reserved for the date, tank number, make and number of the car, and also the name of the owner. Under the double rule is entered the quantity of gasoline and oil that has been used and also the other supplies. The amount is carried out at the extreme right and totalled. At the bottom of this record spaces are reserved for the signatures of the persons who filled the order and also that of the person who received it. From these charge slips the customer's account for supplies, etc., is rendered. The duplicate record is given to the customer at the time of purchase, while the original is filed in the office for future reference. In case of a transient patron the bill is paid and receipted. The method of keeping track of supplies, oil and gasoline for a regular customer is very simple and effective, as the owner can at once see what material has been used by referring to the duplicate charge slip and be assured that he is not paying for goods used on another's car.

The company's method of keeping a check on gasoline is also very simple and effective. There are two underground tanks of 600 and 1000 gallons capacity, numbered respectively 3 and 4. The pumps for these tanks are always locked and the keys kept in the office. Two wheel tanks numbered 1 and 2 are used on the floor of the garage. To illustrate the method followed, 500 gallons of gasoline is put in the 600-gallon tank, number 3, upon receipt of which the tank is charged with that amount on the records. The wheel tanks used on the floor of the garage are always kept filled, it being the duty of the foreman to see that this is done. As gasoline is required from the large tanks to fill the floor tanks, the foreman is required to fill out the charge slip seen at Fig. 4, with the date, the number of the reserve tank from which he will draw and the quantity of gasoline taken out. He signs the slip which is sent to the office, which in turn is filed in number 3 file, corresponding with the number of the reserve tank from which the gasoline was taken. He is then given key number 3, which will give him access to the tank of that number, from which he takes out 50 gallons and puts it into the wheel tank number 1. When this is completed he must immediately return the key to the office. The customer's needs are then supplied and the charge for gasoline entered on the same charge slip which is sent to the office for reference. The charge slip must always show the number of the tank from which the gasoline was drawn. As soon as the number 1 tank is empty and it is necessary to refill it, the foreman again

Digitized by Google

fills out the charge or requisition slip and hands it into the office. It is then ascertained whether the previous 50 gallons has been sold as shown by the slips on file. Should the slips total less than 50 gallons an explanation is at once demanded. If gasoline is required for any other purpose besides retail sale, the man in charge fills out the charge slip in the same manner and denotes for what purpose it has been used. This quantity is charged to the running expenses of the company. The requisition slips from number 3 reserve tank are credited to that tank and by adding the totals it may be easily ascertained whether the reserve tank is getting low. The wheel tanks also have a register, which records the quantity of gasoline taken out each time and any discrepancy in the charge slips is readily detected. However, it is very rarely that this occurs, as the method is simple and easy to follow.

The daily car report sheet is shown at Fig. 2, printed on linen ledger, 13 by nine inches. In the upper right hand corner of this form is seen the number of cars washed and polished and also the date. It is the duty of the night foreman to make out this report and all cars in the garage are reported on this sheet, and whether any work has been done upon them. Spaces are reserved for the name of the car, which are arranged alphabetically and both sides of the report sheet are used. A has five spaces, B, six; C, 16; D, five; E, six; F, four; G, two; H, 10; I, two; J, two; K, six; L, nine; M, 10; N, two; O, six; P, 25; Q, two; R, four; S, 11; T, three; U, two; V, two; W, three; X, two; Y, two, and Z, two. The foreman must sign this report and as every car is accounted for and in its exact place, the management is able to see if all patrons are getting proper attention. The name of the car, the license number and, finally, the work that has been done upon it are entered. This report must check up with the car checks turned in during the day. These reports are filed in the office and arranged according to the day of the month, each month being kept separate, and from them the regular patrons' statement for washing and polishing is made out.

The patron's bill, illustrated at Fig. 3, shows the make of car, the state license number, and when the car was received at the garage. Under the double rule is a blank space for every day in the month properly ruled, with spaces for the charge of storage, gasoline, oils and the amount charged for washing and polishing. Under the heading of "Sundries" is entered the amount of supplies, etc., that have been used and the date on which these goods were sold. These items are made out from the charge slips, one of which, the duplicate, is already in the possession of the patron, and he is able to verify his account by referring to this duplicate. At the extreme right is the total amount of the bill. This statement is also made out in duplicate form and is presented at the beginning of the month. When the bill is rendered it is expected by the garage management that it will be promptly paid, as the margin of profit in the garage field does not allow the company to carry only desirable and prompt paying customers. All work is of the very best and articles are sold at the lowest prices consistent with the prevailing market prices. This record is also printed on bonded stock and measures 11 by 8½ inches. On the reverse side of this statement is a map of the State of New Jersey, showing the good roads, also giving the distance in miles from Atlantic City to all of the principal cities of that state. Marginal notes are also given of the street directions in the chief cities.

Tires are a very important feature at the Atlantic Automobile Company. All incoming tires are tagged with a duplicate tag, bearing space for the customer's name and address. Other spaces are filled in with the size, make, serial number and date of receipt from the factory. When the tires are sold the duplicate portion of the tag is filled in with the customer's name and

Digitized by Google

address and date of sale, and this form is put on file in the office for future reference. The original tag is kept in the stock room, notifying the stock clerk of the quantity of tires sold, and also giving the correct sizes, etc., which simplifies matters in reordering tires.

Lockers are provided in the garage for chauffeurs who desire to have access to their robes and wearing apparel, checks being used for same, as the garage management assumes no responsibility for articles left in the cars when being washed and polished. In these lockers, different parts of the car, such as batteries, spare tires, etc., may also be checked, and this precaution has been found of great satisfaction to both patrons and

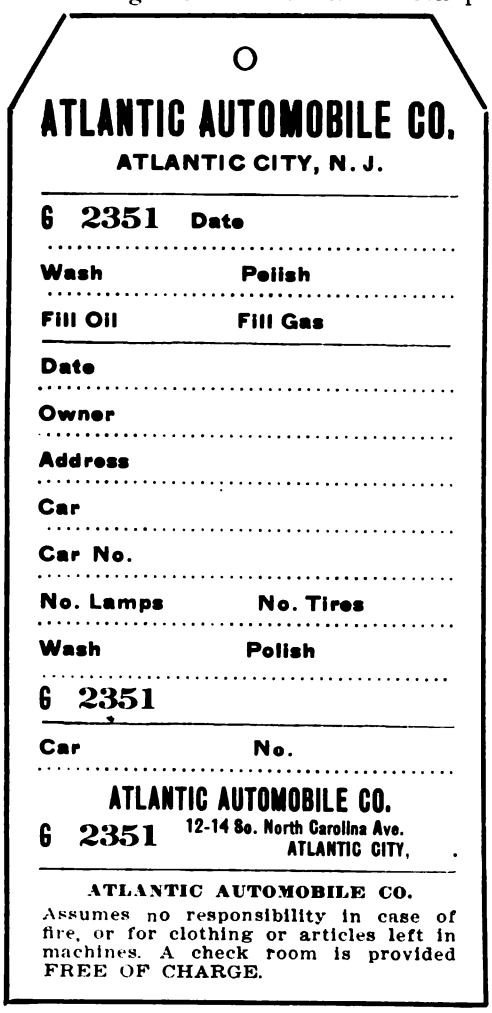

Fig. 1—Showing the Method of Taking Care of Cars as they Enter the Garage; Upper Portion Is Tied to the Car; Middle Section Is Sent to the Office and the Lower Part Is Given the Customer, Which Is Presented to Secure His Car.

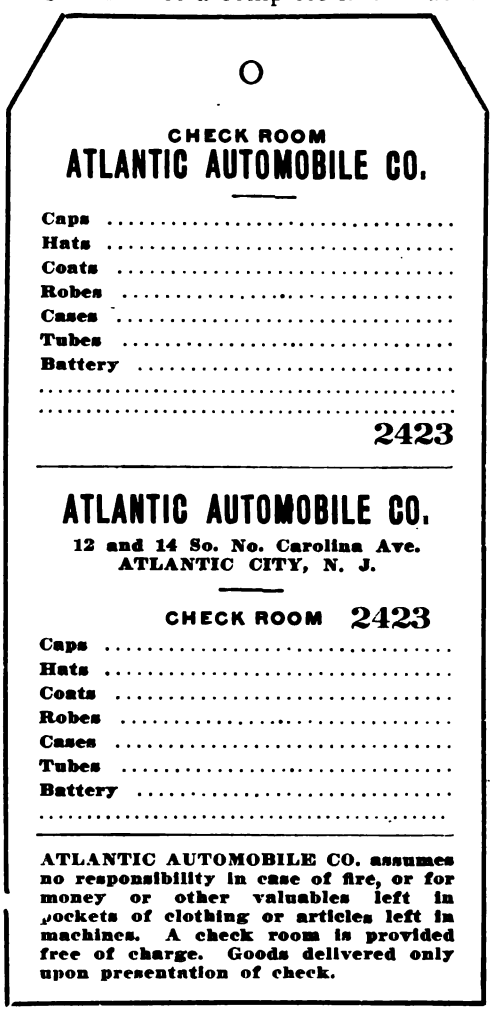

Fig. 5—Check Room Tag for Chauffeurs or Owners to Check Wearing Apparel or Parts of the Car—Upper Half Is Put in the Locker and Lower Half Is Given to the Chauffeur or Owner of the Car.

garage. The check room tag is shown at Fig. 5, which is printed on manila stock, and measures 5½ by three inches. It is divided by a perforated line through the centre. The upper half is put into the locker, together with a full description of the goods placed there, and the lower half given the chauffeur, who cannot secure the articles without presenting the check. These tags bear a serial number, that on the upper half coinciding with that on the lower portion.

The store of the Atlantic Automobile Company is situated in front of the main building and a complete line of automobile accessories and supplies are carried for all makes of cars. Under the ground, outside of the building, are placed the two reserve gasoline tanks of 1600 gallons capacity. Oil is kept in a separate room and is fitted with tanks for the different grades of lubricants, this room being located in the store of the company. As oil is required for work upon the cars, it is passed out from the store to the garage by the person in charge.

The Atlantic Automobile Company states that it owes its success to the careful study of the needs of its patrons, and promptness and courtesy in attending to them, and to the carrying in stock of a complete line of accessories and supplies for all makes of automobiles.

The accommodations are ample for a considerable number of cars without crowding and the facilities are adequate for the care of all cars both regular and transient.

A. R. Mosler & Co., New York City, makers of the well known Spit Fire, Vesuvius and Superior spark plugs, has published a book containing the Mother Goose rhymes in a new way. These are made to do the duty of advertising the Mosler products, and the rhymes are illustrated throughout. In addition to this, the 24-page book contains a complete list of American pleasure cars with spark plug sizes, also the proper Mosler plugs to use on them.

In addition, the Mosler Company has issued a chart containing the names of every car, commercial or pleasure, manufactured, and the size of the spark plug to use in connection with it. Motorcycles are also included in the list. The book is well worth the car owner's time and the chart will be sent to dealers or garage men who ask for it. At the top of the chart is a series of pictures showing the complete line of Mosler plugs. These plugs are printed in silver, gold and black and the Spit Fire plug has its red card, guaranteeing its platinum point.

PERSONAL NEWS OF THE INDUSTRY.

John N. Willys, Toledo, O., president of the Willys-Overland Company, at present is in California. He will spend several months on the Coast.

Herbert A. Githens, Milwaukee, Wis., has gone to Jamaica for his health. He is the vice president and sales manager of the Federal Rubber Manufacturing Company.

John N. Willys, President of the Willys-Overland Company.

B. W. Collins, Muskegon, Mich., has become associated with the Campbell, Wyant & Cannon Foundry Company. He was formerly connected with the Lozier Motor Company, Detroit.

Edgar E. Muller, Cleveland, O., is now associated with the Cleveland Varnish Company as territorial representative, having resigned from the Yuster Axle Company as assistant general manager.

C. H. Martin, Springfield, Mass., is developing a caterpillar tractor of his own design. He is well known to the industry, especially as the designer of the Martin tractor.

W. E. Stalnaker, Chicago, Ill., has been elected vice president of the Motor Car Sales Company. He was for a number of years in charge of the sale of Premier cars in that city.

John Guy Monihan, Indianapolis, Ind., is now vice president and general manager of the Marion Motor Car Company. He was for a number of years associated with the advertising and sales department of the Premier Motor Car Company and later became sales manager of the Cole Motor Car Company.

W. L. Burgess, Cincinnati, O., has resigned as sales manager of the Enger Motor Car Company.

Garnet C. Brown, Detroit, Mich., formerly with the Buffalo Electric Vehicle Company, Buffalo, N. Y., has joined the engineering staff of the Packard Motor Car Company.

John H. Basinger, Jamestown, N. Y., has accepted a position as mechanical engineer with the Gurney Ball Bearing Company. He was formerly connected in the same capacity with the Willys-Overland Company, Toledo, O.

Charles M. Hall, Reading, Penn., has severed his connection with the Parrish Manufacturing Company. He represented that company in Detroit and the West.

H. H. Kneeper, Detroit, Mich., has become affiliated with the National Electric Starter Company. He was formerly a special representative of factory equipment for the H. W. Johns-Manville Company.

Walter Schimpf, New York City, has been appointed manager of the service station of the Saxon Motor Car Company. He was formerly engineer of the E. R. Thomas Motor Car Company.

Frank B. Willis, Detroit, Mich., formerly supervisor of the sales for the Lozier Motor Company, has joined the sales staff of the Chalmers Motor Company.

J. E. Schneider, Troy, O., has become identified with the Troy Carriage Sunshade Company as purchasing agent. He was secretary-treasurer and purchasing agent for the Speedwell Motor Car Company previous to accepting a position with the former company.

Myron Townsend, Detroit, Mich., has severed his connection with the Timken-Detroit Axle Company, to become associated with the publication department of the H. E. Lesan Advertising Agency. He was the editor and copy writer of the house magazine issued by the Timken Company.

John V. Move, Detroit, Mich., has become assistant sales manager of the Kelly-Springfield Tire Company. He was formerly connected with the Goodyear Tire and Rubber Company.

William Ellenback, Jr., Brooklyn, N. Y., who has been identified with the automobile tire trade for a number of years, recently severed his connection with the Ellenback Tire Company.

Lester I. Rice, Canton, O., who was formerly a travelling representative of the Republic Rubber Company, has become associated with the Knight Tire and Rubber Company. His headquarters will be at 216 West 51st street, New York City, where he will distribute Knight tires and tubes in eastern New York, New Jersey and western Connecticut.

L. E. Wood, New York City, is now associated with the Duplex Engine-Governor Company, Inc. He was formerly a road engineer for the Milwaukee Locomotive Manufacturing Company.

G. A. Toas, Detroit, Mich., has been appointed chief draftsman of the Maxwell Motor Company, Inc. He was designer for the Northway Motor and Manufacturing Company previous to his joining the Maxwell Company.

Fred Halligan, Boston, Mass., has charge of the used car department of the Chalmers Motor Company. He was formerly associated with the local branch of the Locomobile Company.

H. C. Faust, Buffalo, N. Y., has been appointed manager of the local branch of the H. C. Faust Company, manufacturer of the Panther spark plug. The company is located at 20 Goodrich street.

E. D. Smith, Detroit, Mich., has become manager of the local branch of the Reed Self-Adjusting Weather Strip Company of Wichita, Kan. Offices have been secured at 805 Chamber of Commerce building. He was until recently manager of the car order department of the Chalmers Motor Company.

Charles R. Talbot, Detroit, Mich., vice president of the National Bank of Commerce, has become president of the Holihan Manufacturing Company, succeeding J. A. Holihan. The company manufactures automobile radiators and other metal specialties for automobiles.

C. E. Poyer, Orange, N. J., has been appointed assistant general sales manager of the Edison Storage Battery Company. He has been with the Edison interests for about four years, having served first on the personal engineering staff of Mr. Edison in the development of a special application of the alkaline battery. He was later assistant advertising manager and for the past two years he has been manager of the house lighting department.

James A. Abeles, New York City, has become identified with the Motor Car Equipment Company, succeeding Carl Kaufman, who retires as general manager and treasurer of that company. Mr. Abeles will continue secretary of that company.

G. C. Brown, Detroit, Mich., is now in the engineering department of the Packard Motor Car Company. He was formerly associated with the Buffalo Electric Vehicle Company.

Channing Parsons, Alma, Mich., has been appointed superintendent of the Republic Motor Truck Company. He was formerly production engineer.

C. R. Green, Dayton, O., has accepted a position as chief engineer of the Mead Engine Company. He resigned as chief engineer of the Speedwell Motor Car Company.

K. W. Najder, Rockford, Ill., has been appointed representative for the Cotta Gear Company, with offices in Detroit at 805 Chamber of Commerce building.

G. V. Nelson, Kansas City, Mo., former advertising manager and second vice president of the Auto Parts Company, Chicago, will organize a new company in the former city, which will be known as the Kansas City Auto Parts Company. He will be president and general manager.

G. V. Nelson, President of the Kansas City Auto Parts Company, Kansas City, Mo.

J. Walter Drake, Detroit, Mich., has been appointed a member of the legislative committee of the National Automobile Chamber of Commerce. He is sales manager of the Hupp Motor Car Company.

W. A. Clare, Syracuse, N. Y., has joined the ranks of the Chase Motor Truck Company and will have charge of the dealers' aid and research department, which was established by H. T. Boulden, who recently became general sales manager of the Chase concern.

Digitized by Google

James Ryan, Detroit, Mich., has become identified with the Detroit Lubricator Company, manufacturer of the Stewart carburetor. He has had 12 years' experience in the automobile and carburetor field as engineer and demonstrator, and is well known in the industry.

Charles L. Derrickson, General Representative of the McQuay-Norris Manufacturing Company.

Charles L. Derrickson, St. Louis, has been appointed general representative to travel the entire country by the McQuay-Norris Manufacturing Company, manufacturer of the Leak-Proof piston rings. He will work in conjunction with the numerous branch offices in the United States and Canada.

Henry G. Morris, Philadelphia, Penn., died recently at the age of 76. He was one of the pioneers of the electric automobile industry and was a mechanical engineer.

W. J. Drumpleman, Lansing, Mich., has been appointed general district manager of the Olds Motor Works. Previous to his connection with the Olds Company he was central district manager of the Lozier Motor Company.

H. D. MacIntyre, Boston, Mass., for some time with the Stutz Motor Car Company, resigned recently and has joined the sales staff of the Paige-Detroit Company.

W. S. Jameson, Boston, Mass., has been appointed manager of the Rauch & Lang branch, succeeding Mr. Boulden, resigned.

Frederick H. Adams, Boston, Mass., one of the pioneers in the motor truck selling business, has joined the sales force of the Reed-Crockett Company.

H. L. McClaren, Racine, Wis., has been re-elected president and general manager of the Mitchell-Lewis Motor Company.

Joseph Galamb, Detroit, Mich., has joined the ranks of the benedicts. He was married recently to Miss Dorothy A. Beckman of Toledo. He is a member of the engineering department of the Ford Motor Company. Henry Ford, president of the company, was present at the ceremony.

Orrel A. Parker, Cleveland, O., is now manager of the wheel department of the Hydraulic Pressed Steel Company. He was for a number of years manager of the Newmastic Company of New York City, and still retains his interests in the Newmastic Company.

R. B. Parrott, Indianapolis, Ind., recently bought an interest in the Oakes Pressed Steel Company and is actively engaged with the company having charge of the buying. He is well known to the industry, having been associated with the automobile business for a number of years.

Frank Witt, Chicago, Ill., has been appointed wholesale and retail sales manager of the Farrington Automobile Company, distributor of the Briggs-Detroiter car. He was one time associated with the Studebaker racing team.

Arthur C. Warren, New York City, is now a member of the sales staff of the Whiting Motor Company, the representative of the Mercer car.

G. W. Squires, Indianapolis, Ind., has been appointed manager of the retail sales department of the local branch of the Oakland Motor Car Company.

C. Louis Allen, Boston, Mass., general sales manager of the Pyrene Manufacturing Company, has gone to the Pacific Coast for a business trip.

C. A. Radcliffe, Louisville, Ky., has been appointed manager of the local branch of the Buick Motor Company, succeeding M. A. MacDonell, who has been made district manager over the Kentucky agencies, also of a part of the State of Indiana.

Berton J. Steelman, Hammond, Ind., has become vice president and sales manager of the Hammond Malleable Iron Company. He was formerly vice president of the Inland Steel Castings Company, Terre Haute, Ind.

R. K. Roberts, San Francisco, Cal., manager of the Oakland Motor Car Company, is on a business trip through the Northwest. He reports an increasing business in that section.

E. F. Bunker, Cleveland, O., has resigned his position with the Perfection Spring Company.

H. L. Connell, Milwaukee, Wis., for the past two years secretary and treasurer of the Detroit section of the Society of Automobile Engineers at Detroit, Mich., will establish a motor car testing laboratory in the former city and will also be a member of the engineering faculty of the Central Continuation school. He was formerly connected with the experimental and truck engineering departments of the Packard Motor Car Company and the Commerce Motor Car Company.

G. A. Sabourin, Tacoma, Wash., has become manager of the newly established factory branch of General Motors Truck Company.

Ralph Estep, New York City, formerly with the Packard Motor Car Company, Detroit, Mich., has become affiliated with the Cheltenham Advertising Agency.

Bruce Brier, Seattle, Wash., has become associated with the General Motors Truck Company in the capacity of sales manager.

Ginder Abbott, New Orleans, La., has been elected a member of the board of directors of the Association of Commerce. He is a member of the Abbott Automobile Company.

Roy W. Anselm, St. Louis, Mo., is now associated with the Kardell Motor Car Company, distributor of the Reo and Chevrolet cars. He was formerly president and general manager of the Anselm-Ganahl Motor Car Company.

A. L. Fussey, Detroit, Mich., was re-elected president of the Detroit Brass Works at the annual meeting of the stockholders held recently.

Valentine Jobst, Peoria, Ill., was elected president of the Peoria Automobile Club. The other officers elected are as follows: Vice president, S. L. Nelson; secretary, W. A. Bunn; treasurer, C. E. Ulrich.

G. F. Burmeister, Rock Island, Ill., was elected president of the Tri-City Auto Dealers' Association. The following officers were elected: Vice president, P. C. Peterson; secretary-treasurer, Ross Beede.

Charles S. Pope, Detroit, Mich., has become a member of the engineering department of the Hupp Motor Car Company.

William Cairns, Cleveland, O., has resigned as general manager of the Parish & Bingham Company, manufacturer of automobile frames and metal stampings.

L. J. Ollier, Detroit, Mich., sales manager of the Studebaker Corporation, has fully recovered from his recent illness and is calling on the Studebaker dealers in southern California.

E. O. Hoopengarner, East Palestine, O., has become identified with the McGraw Tire and Rubber Company, in charge of the New York City territory. He was formerly associated with the Swinehart Tire and Rubber Company in that city.

Charles E. Stone has resigned as manager of the Motor Truck Club of America.

W. J. Pedler, Portland, Ore., who for some time past has been assistant general manager of J. W. Leavitt & Co., distributor of the Overland car on the Pacific Coast, has become northwestern manager of that company. He will have jurisdiction of the branches at Seattle and Spokane, Wash., and will make his headquarters in Portland.

E. W. Spencer, Detroit, Mich., is the new manager of the sales follow up and sales promotion division of the Studebaker Corporation. He makes his headquarters at the factory. He was formerly superintendent of sales in the eastern district.

Walter E. Flanders, President of the Maxwell Motor Company, Detroit, Mich.

Walter E. Flanders, Detroit, president of the Maxwell Motor Company, Inc., announces that the company's sales for the past six months have been far beyond all expectations. Production figures are very satisfactory and a prosperous year is fully expected.

G. W. Tiffany, Detroit, Mich., has become affiliated with the Gibney Tire and Rubber Company. The company specializes in truck tires. He was formerly associated with the truck tire department of Goodyear Tire and Rubber Company.

D. W. Chamberlain, Cleveland, O., has been appointed local branch manager of the Kelly-Springfield Tire Company.

GENERAL MATERIAL MARKET QUOTATIONS.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period for purposes of comparison. Antimony is steadily rising, having gone up 2½ cents for last month and 4½ cents for this month. Both coppers advanced, electrolytic going up $1 and lake $1.02½. Lead rose 10 cents a hundred pounds; tin soared to $3.25 a hundred pounds over last month's figures. Pennsylvania crude dropped 10 cents on the barrel; rapeseed, refined, advanced four cents, and Menhaden brown fell four cents on the barrel. Cottonseed oil gained $1.70 over last month. Rubber showed a tendency downward and fell five cents for the month.

THE ACCESSORY AND GARAGE JOURNAL

VOL. IV. FEBRUARY, 1915. NO. 10.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

PROSPECT FOR 1915 BUSINESS.

That business will be good—in fact, unusually improved—as the year grows older, is a conviction established in the mind of every man who has given the subject thought. Conditions that were simply appalling when precipitated by the European war have been met and dealt with, and while volume of transactions may have contracted because of the limited buying, this lessened business was in part offset by the economies that were found practical. During the seven months since the beginning of the conflict in Europe the industrial and commercial interests of the United States have adjusted themselves to national and international conditions, and today no one will question the statement that American industry and commerce have been proven, and that no matter how long the period before peace is declared, business will continue to develop and improve.

When the facts relative to the commerce and trade of 1914 are carefully considered, one realizes that there was not the shrinkage of transactions or values that might be believed, and that the results following the opening of the war were not what were apprehended. The possibilities for the season that is now at hand are such as to justify the most conservative business man buying not only in considerable quantities, but with confidence that there will be demand largely in excess of what has been experienced in former years. This, of course, applies particularly to the motor vehicle and allied industries and trades.

During 1914 the number of automobile cars, wagons and trucks increased very largely—20 per cent. increase being a conservative estimate—and there will be not only the additional business that will come from the use of these machines, but there is every reason to believe that economic reasons will impel the buying of at least an equal number of machines, if not more, than were bought in 1915. This justifies the belief that the market for cars, trucks, accessories, supplies and equipment, will be larger than ever before, and that there will be unusual selling opportunities for standard productions.

The necessity of providing for this increased trade need hardly be impressed upon those who are engaged in business. Those who have established custom can expect that there will be very large buying within the next two months, and a continuance of patronage throughout the year.

The March edition of the Accessory and Garage Journal will be the most valuable to the trade that has ever been published. It will include features that will make it a trade necessity. The distribution will be in excess of 25,000 copies, which will reach every buying and selling interest, and the contents will be of a character that will impel attention. It will contain as one feature the complete specifications of all pleasure cars and wagons and trucks, both gasoline and electric, which were never before published in a single number of any publication, and in addition to these innumerable accessories, equipment and supplies will be described, illustrated and priced.

This information will make this number the most complete reference for the business man and for the buying motorist that has ever been published, and because it will be placed in the hands of those who will utilize it for the entire season it will have far greater value than the ordinary buyers' guide or business directory. Publicity in its pages will reach many times the number who can be reached through trade mailing lists, and the cost to the advertisers will be trifling when measured by the service.

The March edition of the Accessory and Garage Journal will be more useful to any motor vehicle trade interest than any series of information obtainable, because it will contain specialized data that can be instantly referred to, which will be up to the minute, absolutely accurate, and so presented that any fact desired can be learned almost at a glance. And in addition, the Accessory and Garage Journal has other qualities that recommend it to business men.

NEW CONCERNS AND BUSINESS CHANGES.

GARAGES AND REPAIR SHOPS.

The Goldsmith & Fields Hardware Company, Dunkirk, N. Y., has opened a Ford garage at 381 Leopold street. C. T. Roberts is in charge.

L. F. Bertrau, Big Rapids, Mich., has opened an up-to-date garage.

Floyd H. Johnson, Mt. Pleasant, Mich., has opened a first-class garage and show room on West Broadway. He represents the Ford car.

Chase & Wheeler, Meriden, Conn., is the name of a new concern located on Hanover road. The garage has accommodation for 11 cars. A first-class repair shop will also be maintained.

The Litter Garage and Machine Works, Columbus, O., is the name of a new concern at 792 North High street. An up-to-date repair shop is also maintained.

Fred Miller, Clio, Mich., has opened an up-to-date repair shop for automobiles.

Roy Carroll, Richmond, Ind., has opened a garage in the Hunt building and represents a well known make of car.

Bowers & Son, Frankfort, Ind., has opened a modern garage. A line of automobile accessories is also carried.

T. H. Elkington, San Francisco, Cal., has opened a repair shop at 1135 Van Ness avenue. The company handles the Norfolk tubes and tires and a complete line of accessories.

H. F. Daniels, Seattle, Wash., has opened a co-operative repair shop at 1107 East Pike street, under the firm name of the Lions Auto Repair Shop.

The Auto Sales Company, Portland, Ind., has opened a garage on North Meriden street.

Walter R. Horning & Co., Cleveland, O., has opened a service station at 733-37 East 12th street. The firm specializes in the repair of electric starters, generators and storage batteries.

The Service Garage, Frankfort, Ind., is the name of a new company there. Stanley Lusader is the proprietor. The garage is fireproof, has 11,616 square feet of floor space, and is thoroughly equipped to do a machine and repair shop business. A paint shop and vulcanizing plant are included.

John M. Osmond, Seattle, Wash., formerly with the Mitchell, Lewis & Staver Company, has opened a service station at 1722 Broadway and will handle the Mitchell car.

Butzer Brothers, Lancaster, Penn., has opened new headquarters at 28 East Chestnut and South State streets. A first-class repair shop is maintained.

Webb & Rhose, Corning, N. Y., is a new concern operating an up-to-date garage on East Market street. The company is agent for Ford cars.

Grehan's Garage, Woodhaven, N. Y., has been opened at 1166 Jamaica avenue. It is thoroughly equipped.

George Kendall, Stevens Point, Wis., has established a repair shop at North Second street. Painting and trimming will also be specialized in.

Frank Lyon, Phoenix, Ariz., has opened a garage and repair shop at 227 East Adams street under the name of Lyon's Garage. He has been in the automobile repair business for over seven years.

J. D. McIntyre, Cambridge, Mass., has started business at 29 Green street, where he has opened an automobile repair shop. He was formerly connected with the Premier Motor Car Company, Boston.

The Pine Lake Garage, Boyne City, Mich., a new concern, opened recently in the old postoffice block. John Street and Loyal Newville are the owners.

Norman W. Gibbs, Cobb., Wis., and his brother have established a garage and will handle several lines of pleasure cars. The garage is modern throughout.

Charles R. Tomlin, Bridgeton, N. J., will open a garage in the Hitchner building.

W. G. Rosser, Georgetown, S. C., has opened a garage and repair shop which is modern throughout.

W. E. Ellis, Findlay, O., has opened a garage and repair shop at 225 North Main street. A complete line of repair and vulcanizing tools and machinery have been installed. Rebuilt cars will be a feature of the company's business.

The Central Garage, Hanover, Penn., has opened for business in the Melhorn building. H. M. Sterner is the owner.

W. W. Pass, Lancaster, N. H., has opened an up-to-date garage in the rear of the Lancaster house.

R. H. Erskine, Meriden, Conn., formerly with the Jones garage, has opened an up-to-date repair shop on Church street. He is thoroughly conversant with the automobile repair business.

The Awadawagam Motor Service Company, Grand Rapids, Wis., has opened a repair shop and accessory store under the management of Verne P. Rumsey.

N. H. Gerber, Monticello, Wis., will open a thoroughly equipped garage and repair shop.

The Deitsel & Gilbertson Garage, Whitewater, Wis., has opened its modernly equipped garage.

J. C. Atkins, Des Moines, Ia., has opened the Walnut Street Auto Repair and Supply Company, at 1012 Walnut street.

H. Storley, Eau Claire, Wis., has opened an up-to-date garage and repair shop.

M. H. Wood & Co., Jopling, Mo., has opened its new large modern garage on Wall street. The Chalmers car is handled.

S. M. Gabuey, Orange, Tex., will open a modern garage on Fifth street, which will be known as the Central Garage.

LeRoy B. Maloy, Waterbury, Conn., has entered the garage field.

M. J. Joyner, Jacksonville, Fla., has opened an automobile repair shop at 23 East Beaver street.

The Motor Inn, Mandan, N. D., a new firm, located in the Ronco building, at the former stand of the Massey Star garage, conducts an up-to-date repair shop. The Reo car is represented.

R. W. Stewart, Findlay, O., has opened for business at 531 West Hardin street. Two experienced repair men have been engaged to attend to repairs on all makes of cars.

The New Cadillac Company of Oklahoma, Tulsa, Okla., is the title of a concern beginning operations in that city, at 503 South Boulder street. A service station and general repair shop will be conducted at First and Denver streets.

The New Garage, Morris, Minn., was opened recently on Atlantic avenue under the management of Clifford A. Lee, who will operate it with the assistance of several experienced mechanics. An up-to-date garage and repair shop will be conducted and a first-class line of pleasure cars carried. The building is of concrete block construction without pillars or posts.

Hughes & Co., Johnstown, N. Y., is conducting an up-to-date garage on West Main street. W. H. Shepard and William E. Hughes are the owners.

The Reliable Garage Company, Mitchell, S. D., a new organization composed of H. R. Leonard and J. H. Mueller, has located at 217 First avenue, west, and will conduct a garage and repair shop and handle the Metz, Herff-Brooks and Cartercars.

J. W. Wozencraft, Cincinnati, O., has opened a first-class garage and repair shop at 326-28 West Seventh avenue, formerly occupied by the Winton agency.

E. W. Jones, Marquette, Mich., has opened a repair shop in the Superior garage on Spring street. Ford cars are also represented.

The Dassel Auto Company, Dassel, Minn., has opened a garage and repair shop in the Nels Rudberg building.

The Litchfield Automobile and Repair Company, Litchfield, Ill., was organized recently by A. G. Haeverle and H. W. Pass. The company will conduct a garage and repair shop and is located at 508-10 North State street. Arrangements are being made to handle the agency for one or two popular-priced cars.

RECENT TRANSFERS.

The Estes Garage, Warrensburg, Mo., has been purchased by J. S. Pollock. He is located at South Holden street. He will make many improvements.

Ludington & Reese, Hamilton, Ill., has sold its garage and equipment to Kopsicker & Wiley.

W. C. Robinson, Farmington, Mo., has bought the automobile repair shop of F. Schleicher.

J. W. Smith, Shelbina, Mo., has bought a half interest in the Swinney garage and the firm name will be the Swinney & Smith Garage.

The Universal Oxygen Company, Sheboygan, Wis., has purchased the business and shop of the Wisconsin Welding and Cutting Company, at 167 Barclay street, Milwaukee. The shop is to be enlarged at once. The former company produces welding and cutting apparatus and tanked gas for such plants.

Christian T. Christianson, Rice Lake, Wis., has purchased a half interest in the garage of C. J. Boortz. The firm name has been changed to Boortz & Christianson. New quarters have been opened on Marshall street in the Automatic Trip Carrier factory, where the facilities for a garage will be doubled.

F. H. Underhill & Sons, Maxwell, Ia., has purchased the machinery, repair department and the agency for Overland cars from Trout Brothers, proprietors of the Maxwell Automobile Company agency.

The Cameron Auto Company, Princeton, Mo., has sold to Richard Watson and George Harris the interests of George Groebe and J. S. Moore. The new company will have charge of all supplies and repair work. The business will continue under the name of the Cameron Auto Company.

J. W. Eggleson, Butler, Mo., has purchased the stock of cars and other property from McFarland & Sons, and has rented the garage for a term of years.

Digitized by Google

A. J. Caltrider, Casey, Ia., has sold his garage to Warren Cline and Glen Brown, who will continue it under the name of the Casey Auto Company.

The McGivern Motor Company, Davenport, Ia., has purchased the business of the Wagner Motor Company and is now distributor for the Mitchell car in eastern Iowa.

Harold Barr, La Porte, Ind., has purchased the Coliseum garage on Michigan avenue.

Albert Stafrin, Utica, Neb., has sold his interest in the automobile business to his partner, Oscar Craige, who will conduct it alone.

Christopher Hansen, Bloomington, Neb., has sold his garage to W. F. Bogenhagen.

F. N. Dorland, Peru, Neb., has purchased the garage of H. E. Patterson.

Bert Woodside, Buffalo, N. Y., has purchased the garage business of Collins & Akres.

Roy Dickinson, Clio, Mich., has purchased the garage of Thomas Warren. Ford cars are carried.

Swenson & Rosholt, Iola, Wis., is the new name of the former Swenson garage, Robert Swenson having sold his interest to Jacob Rosholt. C. J. Swenson still remains in the firm. Overland, Ford and Case cars are represented.

L. W. Leib, Volga, S. D., has purchased the Brown garage. He is an up-to-date repair man.

Henry Blankfort, Grand Rapids, Mich., has become the owner of the former Willey garage and the business will hereafter be conducted as the Colonial Garage Company. It is located at Charles avenue and Wealthy street.

Daniel H. Thomas, Monroe, N. Y., has sold his interest in the Monroe Garage Company to Vernon Freer.

Fred McCammon, Hagerstown, Md., has purchased the Standard Vulcanizing Company at 5 North Locust street. He will make a number of improvements.

James A. Hayes, Union Springs, Ala., has purchased a half interest in the City Auto and Supply Company and the business will continue to be conducted under the same name. Repair work will be specialized in and a complete line of automobile accessories carried.

The William A. Waite Storage Corporation, New York City, has purchased the one-story garage at 1824 Webster avenue.

Clarence H. Werner, Rockport, Ind., has purchased the Rockport Garage and Supply Company. The new firm will be known as Werner's Garage. Mr. Werner was formerly associated with the De Mott garage, Huntington, Ind.

Dewitt & Robinson, Grand Rapids, Mich., has taken over the repair shop formerly occupied by Bouse & Sons, at 1835 Plainfield avenue.

The Auditorium Garage, Houston, Tex., has been taken over by Z. E. Schofield and C. H. Beard.

E. Blisner, St. Louis, Mo., has purchased the business of the Central Motor and Cycle Company at 3536 Lindell avenue, and will change the name to the Grand Lindell Motorcycle Company. The repair department has been remodelled. The company handles the Henderson car.

Boyd and Dayton Mahaffey, Corning, N. Y., has purchased the Daniel Kelley garage business at 105 East Market street. The company proposes to handle several makes of cars.

The Coffeyville Garage, Coffeyville, Kan., on East Eighth street, has been purchased by Jesse Sigsbee and Guy Bayless of the United States Garage Company on Spring street.

The Blowing Rock Auto Line, Lenoir, N. C., has been purchased by A. W. Dula. He is also owner of the Lenoir, Blowing Rock and Boone Auto line, and has consolidated under the name of the Blowing Rock line.

P. Barrett, Dolgeville, N. Y., has purchased the garage business of Smith & Lewis on West Albany street. James Barrett is also interested.

R. J. Hitt, Winston-Salem, N. C., has purchased an interest in the Auto Repair Company on North Trade street. He has been associated with the Montague garage for some time.

E. O. Leets, Mt. Pleasant, Ia., of the Harlan house, has purchased the business of the Davison Automobile Company at Burlington.

James M. Donohue, Niagara Falls, N. Y., who has been associated with the Power City Auto Company, at 312 Third street, has purchased the interest of his partner and will operate the business alone.

John F. Kedian, Brockton, Mass., has purchased the interest of Harold W. Austin in the Austin-Kedian Company at 38 West Elm street. The new owner will continue the business himself under the name of the Kedian Auto Supply Company.

Frank W. Elwell, Winner, S. D., has become owner of the Winner garage. He will conduct the business.

The Union Motor Company, Davenport, Ia., at 527 West Third street, has been purchased by John Bolte.

Sanderson & Little, New Lisbon, Wis., has sold its garage, auto livery and machine shop to Frank W. Bunker. G. M. Little has left the company.

The Lampan & Brown Garage, Edgerton, Wis., has been purchased by W. F. Mabbett and Herman Stark. The new owners are well known to the trade.

The Hub City Auto Company, Marshfield, Wis., has been purchased by John McDonald, he having bought his partner's interest.

The Aetna Garage, Hartford, Conn., at 1225 Main street, has been taken over by Arthur A. McLeod. He is well known to the industry, having been for a number of years with the Pope Manufacturing Company.

B. F. Stanley, Mingo, O., has purchased the interests of J. W. Cox in the Mingo Junction garage and repair shop, located on Commercial street.

The Charles City Motor Car Company, Charles City, Ia., has been bought by L. R. Smith and A. N. Norford, but the firm name will not be changed. The company will handle the Glide, Overland and KisselKars, as well as carry a complete line of accessories and supplies.

R. L. Baldwin, Columbia, Mo., recently purchased a half interest in the garage of W. S. Roberts, 1105 Broadway.

The King's Beach Garage, Swampscott, Mass., has been purchased by F. Richardson. The company is located at 44 Humphrey street.

CHANGE OF NAME.

The Burgett Auto Company, Milwaukee, Wis., has changed its name to the Milwaukee Motor Sales Company.

The Spear Auto Company, Portland, Me., has changed its name to the Peterson Motor Company.

The Pittsburg Chalmers Company, Pittsburg, Penn., has changed its name to the Wyckoff Motor Sales Company. The company handles the Reo, Chalmers and Saxon cars.

The White Front Garage Company, Niles, O., has changed its name to the Trumbull Buick Company. Edward Thorpe has purchased an interest. Buick cars are handled.

The Western Iron Works, Manitowoc, Wis., has changed its name to the Grimm Aluminum Castings Company.

The Gibney Motor Supply Company, Philadelphia, Penn., has changed its name to the Gaur, Derr & Shearer Company. The company is a pioneer accessory house located at 217 North Broad street.

The Selden-Maxwell Company, St. Joseph, Mo., has changed its name to the Maxwell-Hudson Motor Company. The company is located at 11th and Faraon streets. Maxwell and Hudson cars are carried.

The Gibson Automobile Company, Indianapolis, Ind., has changed its name to the Gibson Company.

The White Motors Company, Kansas City, Mo., has changed its name to the Scarritt Motor Car Company.

The Moorehead Auto and Supply Company, Moorehead, Minn., has changed its name to the Schranz Brothers Auto Company. A repair shop is maintained and Buick cars are handled.

AGENCIES AND DEALERS.

The Broome-Bergeber Abe Sales Association, Burlington, Wis., has been organized to represent the Ford in that territory and to distribute a varied line of supplies and accessories in Wisconsin, Minnesota and north Illinois. The company is located in the Kruckmann building.

A. A. Coxson and E. S. Fairchild, Mason City, Ia., will engage in the automobile business.

Louis Otto, Davenport, Ia., has entered the automobile field and handles the Marmon car.

The Cornelius-Browning Auto Company, Toledo, O., is the name of a company organized recently by R. C. Cornelius and H. H. Browning, to take over the business of the Cornelius Auto Sales Company at 817 Jefferson avenue. The company represents the Krit car.

The Central Motor Car Company, Alliance, O., organized by M. E. Biery, has taken the agency for Herff-Brooks cars, and for Republic and Gramm trucks. An up-to-date garage will also be maintained.

E. E. Moser Company, Omaha, Neb., has opened sales rooms at 2218 Farnam street. The company was organized recently, and represents the Commerce, Denby, Federal and Standard trucks.

The Durbin-Thomson Company, Ltd., Milwaukee, Wis., was recently formed by W. N. Durbin and W. R. Thomson, both well known to the trade. The company handles the Moon car for that state.

Clarence N. Peacock & Co., New York City, in addition to the Ames equalizing springs, has secured the distribution of the S-M-H chain tool, the Clincher tire plow and the Boyce hand horn.

The Platt-Fawcett Company, Denver, Col., is a newly organized concern located at 1249-55 Broadway. The company handles the Chalmers car.

Lexington Sales Company, New York City, has established ware rooms and a service station at 238 West 56th street. The company was recently organized to market the Lexington car in the East.

The Southern Tire Company, Louisville, Ky., was recently opened at 453 South Third street. F. W. Potts is in charge.

G. H. Woodbury, Nashua, N. H., and A. H. Brown have taken the agency for Lee puncture proof tires for that territory.

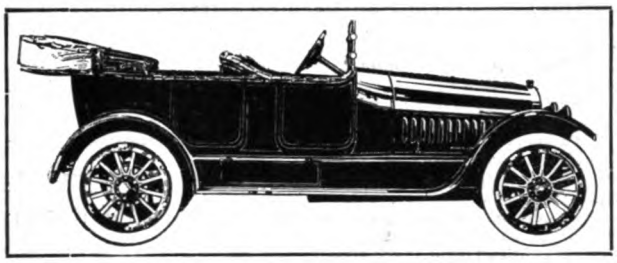
HERFF-BROOKS MODELS.

Four Has Larger Bore and an Increased Wheelbase.

In keeping with its usual progressive policy, the Herff-Brooks Corporation, Indianapolis, Ind., maker of the widely known Herff-Brooks four and six-cylinder cars, invited all dealers and others interested to make space C-20 their headquarters at the New York automobile show. The company also extended the same invitation in connection with the Chicago show.



The Herff-Brooks Six-Cylinder Car, Selling for $1375, Fully Equipped, with Electric Starting and Lighting.

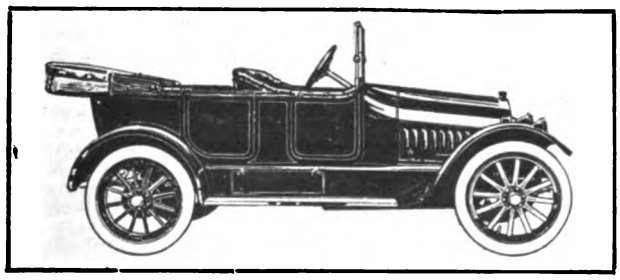
Dealers were attracted by the $1100 four-cylinder model and the $1375 six, exhibited by the company at the recent national shows. These cars, fully equipped, and having Stromberg carburetor, Bosch ignition, Timken and New Departure bearings, electric lighting and starting, etc., present a big value.

Taking the six-cylinder model first, it is seen that this car has an L head motor, with the cylinders cast separately. The bore is four inches, and the stroke 4½, giving a horsepower rating of 38.4, according to the S. A. E. formula. However, the maker states that 50 horsepower can be developed. The method of casting calls for a long crankshaft and hence more than the usual number of supports. Altogether seven bearings are used in this model. The power transmission is through an inverted cone clutch equipped with a brake to a three-speed gearset redesigned slightly to care for the central control. The body is a full streamline and a folding down steering wheel is employed, hinged so that the driver may enter or leave the car without inconvenience. Another change is the right drive and centre control instead of the left and centre. The lighting and starting system employed is the Apelco, and the new one-man top has been substituted for the regular type.

In the four-cylinder model a larger motor is used and the cylinders are cast en bloc. The design is the L head and a bore of 4½ inches by a stroke of five gives a horsepower rating of 32.4, S. A. E., but the manufacturer claims that 40 horsepower can be developed with ease. The bore has been increased three-eighths of an inch compared with the previous year's model, and the wheelbase of the four has been increased from 116 to 118 inches. The five-passenger models now have an extra folding seat for a sixth person which, when not used, is placed in a tool box under the front seat.

The wheelbase of the six, 124 inches, remains unchanged. Both cars have the honeycomb radiator, and in both cases the cooling is by pump. The lubrication is by splash and the carburetor is fed by gravity.

Throughout the entire car is an excellent example of workmanship from the mechanical parts to the deep Turkish upholstery. These cars are built complete in one huge factory and the manufacturers state that the small overhead makes the price possible. Dealers are invited to write for catalogue P. A. W. for full particulars regarding terms, etc.



The $1100 Four-Cylinder Herff-Brooks Model, Which Has an Increased Bore and Wheelbase.

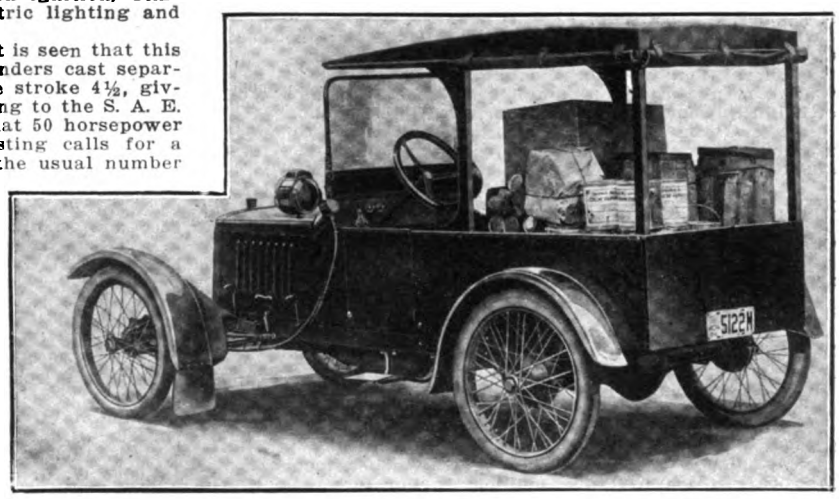
SAXON'S TWO SURPRISES.

Has New Six at $785 and New Delivery Car at $395.

The 1915 offering of the Saxon Motor Car Company, Detroit, Mich., is featured by a record low six, selling for $785, and a four-cylinder delivery car. The Saxon Company has established a great many records in more ways than one. A year ago it produced its first sensation by announcing a four-cylinder car to sell under $400. Since that time the Saxon has progressed steadily, and it is the claim of the company that it shipped more cars during the first year of production than any other company in the history of the automobile business.

A Saxon recently travelled 3389 miles in 30 days overland from New York to San Francisco across the Lincoln highway; another made a non-stop run from Detroit to New York in a running time of 51 hours, and still another ran 135 miles a day for 30 consecutive days, 4050 miles, averaging 30 miles to the gallon of gasoline and 150 miles to the quart of oil, making the entire distance on the original tires. These facts speak well for the stamina and high quality of the Saxon product.

The new $785 Saxon six has a long stroke, is of the L head type, water cooled and develops 35 horsepower on a block test, according to the maker. The car is fitted with a Gray & Davis starting and lighting system, and the equipment is complete in every respect. The transmission has three speeds forward and reverse, and a dry plate clutch is employed. The ignition is furnished by the Atwater Kent system. Cantilever rear springs are used, these being made of vanadium steel. The shipping weight is approximately 1950 pounds and the tires are 32 by 3½, demountable rims being included in the regular equipment. Other items that go to make this complete include one-man top, speedometer, two-piece rain vision windshield, extra demountable rim, electric horn, foot and robe rails, tools, etc.



Three-Quarter Rear View of the $395 Saxon Four-Cylinder Delivery Car.

The Saxon delivery car, shown herewith, offers an enormous field for the dealer. This powerful little machine, selling for $395, presents great possibilities in every line of merchandise. Speaking of this delivery car, Lawrence Moore, director of sales, says that much attention has been given by the Saxon engineers to securing simplicity of the control of operation, so that inexperienced drivers may have no difficulty in operating it. "The new Saxon delivery car is designed for the thousands who need motor delivery in their business, yet who have always thought of motor delivery cars as being expensive", says Mr. Moore. "After a long period of experimenting, we have produced a delivery car which costs no more than a good horse and wagon and at the same time has every advantage over horse delivery in point of distance covered, new business possible to handle, mile for mile economy and dependability".

The motor of the Saxon delivery is a four-cylinder, L head type, cast en bloc, with a bore of 2⅝ inches and a stroke of four. The cooling is by thermo-syphon system, with a cellular radiator fan. The carburetor is a special Mayer, with adjustments for air and gas on the dash. Likewise the ignition switch is located on the leather covered instrument board, and further convenience is provided by making the spark control automatic.

At all of the recent automobile shows the Saxon six and the smaller model attracted large crowds, and the dealers realized some very excellent sales at New York, Philadelphia, Detroit, Chicago, Cleveland, etc., wherever the cars were exhibited.

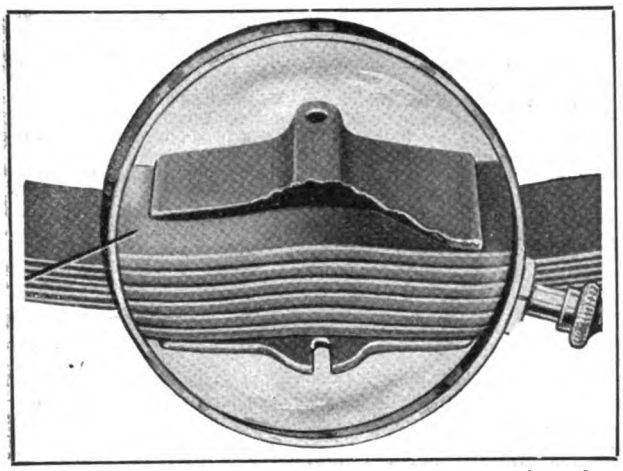
A GUARANTEED SPRING.

Tuthill Product Is a Breakless, Squeakless Construction and a Profit Maker for the Trade.

Dealers, garage men and repair men desiring high-grade motor vehicle springs will be interested in the product of the Tuthill Spring Company, 776 Polk street,



In the Tuthill Spring the Centre Bolt Is Eliminated.

Chicago, Ill. This concern has been specializing in springs for over 35 years and its Titanic unbreakable spring is the result of careful experimentation and road tests.

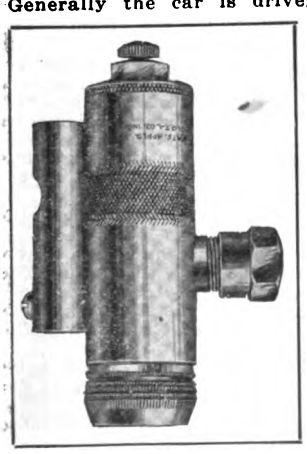
The Tuthill differs from other types in that the centre hole, used for the bolt retaining the leaves, and the usual clips, are eliminated. Such a construction as the Tuthill affords maximum elasticity as well as makes for extreme strength and durability, for the point subjected to the greatest strain is not perforated.

The Tuthill is sold under a "forever" guarantee against centre breakage, and is also warranted against defects in material or workmanship. The company is an old established concern, carries an enormous stock and can fill rush orders promptly, a feature that will appeal to the trade. The profits obtainable with the Tuthill springs will interest the trade. The company will supply details of its spring proposition, as well as of its product, upon request.

NEW POLO TIRE ALARM.

A Practical Device for Notifying Driver of the Car When Pressure Falls Below Safety Point.

W. Lewis Mack, general distributor, 24 West Jackson boulevard, Chicago, Ill., is marketing the improved Polo tire alarm shown herewith. It is a very compact, practical device, which informs the driver of a motor vehicle equipped with pneumatic tires when the pressure falls to the minimum safety point. The alarm gives a signal that can be easily distinguished from the sounds of traffic, etc., and when the machine is in motion. The signal, of course, is sounded when the pressure falls. The equipping of a car with the tire alarm makes for tire economy, as the operator is notified of a soft shoe. Generally the car is driven until a condition obtains termed "riding on the rim".



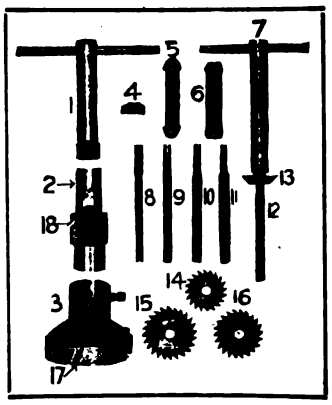
New Polo Tire Alarm.

The model No. 15 Polo tire alarm is an automatic pressure gauge that is attached to the valve stem. One of its desirable qualities is that the tire can be inflated or use made of a gauge without removing the alarm. If the service of the signal feature be not desired, it can be dispensed with. The Polo tire alarm comes four to the set, is moderately priced, and should interest every operator of a motor vehicle. The maker has an attractive proposition for the trade, and details will be supplied upon request. W. Lewis Mack is also marketing the "Motor Eye", which is attached to the filler cap of the car. It indicates the temperature of the cooling fluid. The "Motor Eye" has been thoroughly tested out, is nicely made, and retails for $2.50.

VALVE SEATING DATA.

H. G. Paro Supplying Garages and Repair Shops with Book Describing Methods of Regrinding Valves.

This is the busy time of the year with the garages and repair shops, as the motorists are beginning to send in their cars for overhauling. Within a few weeks the rush will come, as with the approach of spring the owners will want their machines in a hurry. Consequently, the garage and repair shop equipped with up-to-date tools, etc., will be able to turn out considerably more and better work than the shop relying upon old-fashioned methods.



Fosnacht Valve Reseater.

Valves have to be reground and reseated in the overhaul of the motor and a method that will save 75 per cent. of the time usually required is described and illustrated in the book issued by H. G. Paro, suite 730, Michigan Boulevard building, Chicago, Ill. This book describes how valves should be treated and explains in detail the time and labor saving advantages of the Fosnacht valve reseating equipment. The book will be mailed free upon addressing the maker.

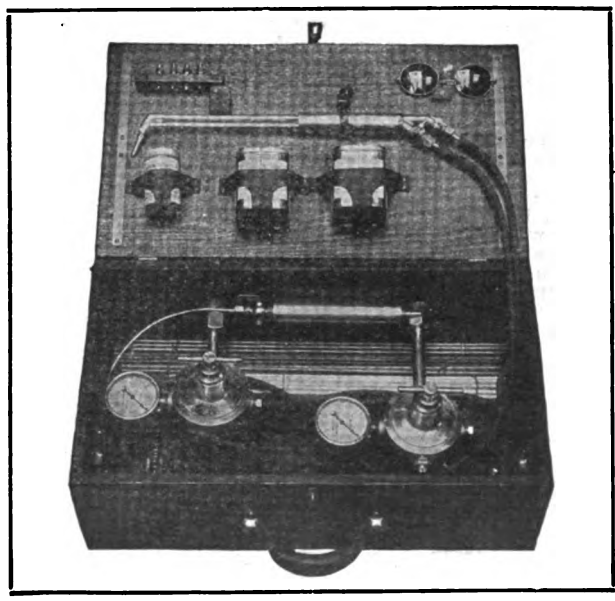
IN NEW QUARTERS.

The Automobile Manufacturers' and Dealers' Association of St. Louis, Mo., has taken possession of its down town offices at the headquarters of the Automobile Club of St. Louis in the Planter's hotel.

WELDING PROFITS.

Waterhouse Welding Company Makes Liberal Offer to Concerns Interested in Such Apparatus.

Garages and repair shops interested in welding and decarbonizing equipment should investigate the free trial offer of the Waterhouse Welding Company, 3 Pelham street, Boston. This company has specialized in welding apparatus for years, and produces equipments to meet all requirements. One of the features of the Waterhouse product is the non-flashable torch. The advantages of a welding and decarbonizing outfit are well known. Not only can work be performed in the garage at a profit, but considerable on outside jobs that can be made to pay. The Waterhouse Welding Company's free offer should be investigated by every garage or repair



Carrying Case of the Waterhouse Welding and Decarbonizing Equipment.

shop in need of such equipment. The Waterhouse product is sold under a liberal guarantee. Details of the offer will be forwarded upon request.

The Lowell Welding Company, Lowell, Mass., has moved from 64 Leverett street to the large and up-to-date building at 62 Leverett street.

The Indiana Commercial Truck Company, New York City, has leased the building at 245 West 55th street.

Gregory Brothers, Norfolk, Va., has removed to a new and more commodious building on City Hall avenue. The company does a general automobile repair business.

The Parker Motor Car Company, Seattle, Wash., is now located in its new building at 1507 Broadway. The company handles the Pullman car.

Carleton & Cooley, Oakland, Cal., has leased sales rooms at 406 20th street, where attractive quarters for Imperial and Pullman cars have been secured.

The W. A. Sewall Company, Clinton, Ia., has completed its new garage.

The Frank Sanders Automobile Works, New York City, will soon locate in its new quarters in the Motor Mart building, at 65th street and Broadway.

The King-Dahl Company, Fargo, N. D., agent for the Studebaker car, has removed to new quarters.

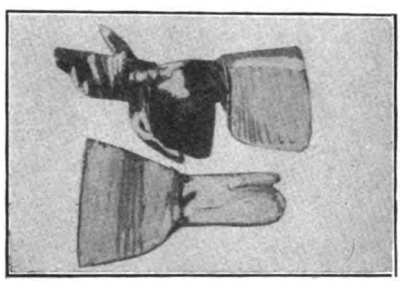
ACCESSORIES, SUPPLIES AND FITTINGS.

THE "GRIP-TITE" GLOVE.

Has Extra Palm, Affording a Secure Grip on Steering Wheel.

The Morrison-Ricker Manufacturing Company, Grinnell, Ia., is producing what is termed the "Grip-Tite"



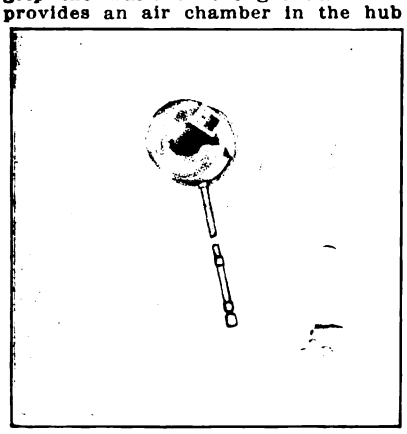
glove. It is provided with an extra palm so sewed that the leather puckers between the stitches to form corrugations. It is stated that these corrugations afford a firmer grip on the rim of the steering wheel than with regular gloves, and that the design is more enduring. The "Rist-Fit" closing device is designed to prevent the cuff from sagging down over the hand. The one-fingered mitten shown is lined with eider-down wool and is supplied with either a gauntlet or with a web wrist.

AUTOMATIC TIRE INFLATOR

Novel Device for Maintaining Pressure in Tires.

The D. L. Davis Manufacturing Company, Marquette building, Chicago, Ill., is marketing the automatic tire inflator, which is a novel mechanical construction that maintains the tires of the motor vehicle in a fully inflated condition; that is, air is pumped to the shoes when the car is being operated. The air is supplied by a pump of the diaphragm type, and there is a distributor on the dash board of the machine.

The air is pumped through rubber tubes to a rotary joint placed in each wheel. This joint consists of two circular discs, which revolve upon one another, one disc being fixed in the hub of the wheel, revolving with it, while the other is attached to the axle, and is stationary. These discs are connected by a deep groove in the revolving disc, into which fits a projecting ring or flange on the other disc, which carries a U shaped gasket of such form that, when air is pumped into the groove the pressure expands the gasket, so that the edges grip the walls of the groove. This provides an air chamber in the hub of the wheel, and the air is carried from this compartment direct to the tire. An air tube leads from this chamber to the valve stem, as shown in the accompanying illustration. An adjustable sliding sheath connection is provided, making it possible to attach a conventional hose line.

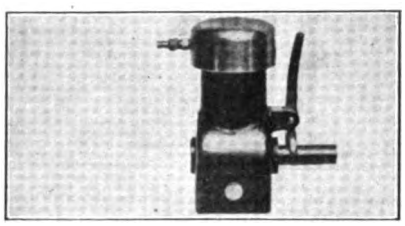


LIPMAN POWER TIRE PUMP.

New Model Is Known as the 21 and Is for 1915 Cars.

The Lipman Air Appliance Company, 700 Pleasant street, Beloit, Wis., has brought out a new model of power driven tire pump listed as the model 21. It has a large bore and short stroke, and is supplied with gears, hose and bracket for attachment to the majority of the 1915 models not equipped with a power tire pump.

The pump is an all-metal construction, has a drop forged ground crankshaft, and the cylinders and pistons are of a special gray iron.

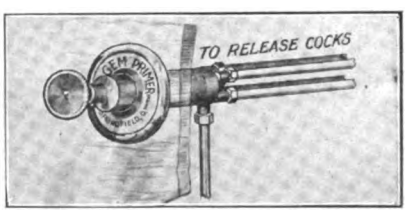


Both the inlet and exhaust valves are located in a special head plate, and a hood prevents the entrance of foreign elements. The pump has a gearshift lever with a positive lock. It retails for $15.

THE GEM PRIMER.

Takes Fuel from Main Line and Forces It to the Cylinders.

The Gem Primer Company, Springfield, O., is manufacturing the Gem primer, which the maker states will make easy the starting of the motor without spinning, either mechanically or manually. The device provides for utilizing gasoline from the supply line and forcing it under pressure into each cylinder.



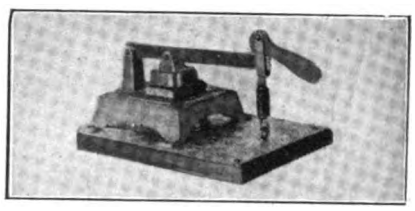
The appliance fitted to the dash of a car is shown in the accompanying illustration and, as may be noted, the vertical pipe is connected with the fuel supply line. Leading from the unit are the tubes which connect with the priming cocks or spark plugs.

A slight turn of the piston member opens the supply line, and a single reciprocation of the piston out and in forces the fuel through the tubes to the cylinders. Special spraying nozzles are provided, these connecting the tubing with each cylinder, and a ball check valve prevents any leak on the compression stroke of the piston. The check valves screw into the cylinders in place of the petcocks, and a special connection is made for the Ford motor. The Gem primer sells for $7.50.

HORSEY PONY VULCANIZER.

Special Design for Use with Horsey No-Cement Patches.

The Horsey Manufacturing Company, 6104 Euclid avenue, Cleveland, O., is producing the Horsey pony vul-



canizer for repairing inner tubes. It was specially constructed to demonstrate that the Horsey no-cement patches can be vulcanized after application without the use of cement.

The new vulcanizer is constructed on the principle of the large types, and the maker states that it is the only design having a spring tension on the tube when in service. It can also be handled without danger of burning the hands. Denatured alcohol is employed for a fuel, and a steady, uniform heat is obtained. The vulcanizer is five by six inches, is mounted on an eight by 10 board protected by galvanized iron. All parts are nickel plated. The Horsey comes with 12 assorted patches, sandpaper and complete instructions. It sells for $8.

THE "MOTOR EYE".

Indicates Changes in Temperature of the Cooling Fluid.

W. Lewis Mack, general distributor, 20 West Jackson boulevard, Chicago, Ill., is marketing a practical and useful device termed the "Motor Eye". As may be noted by the accompanying illustration it is mounted on the radiator cap by drilling a 7/16-inch hole in the cap and passing the standard through the opening. The standard has a threaded stem for taking a lock nut, which is screwed up to secure the "Motor Eye" in position.

The device serves a number of useful purposes. It warns the driver when the temperature of the cooling fluid rises above normal, as well as indicates low temperatures. Any failure of those components of the motor which would cause the overheating of the power plant is denoted by the "Motor Eye".

The registration of the temperature is obtained by a mercury charged, metallic, thermo conductor rod in direct contact with the water as it leaves the motor and passes into the radiator. The device is calibrated, and readings are taken as easily in the night as in the day, as the height of the fluid is easily noted against the light background afforded by the rays of the headlights. The "Motor Eye sells for $2.50.

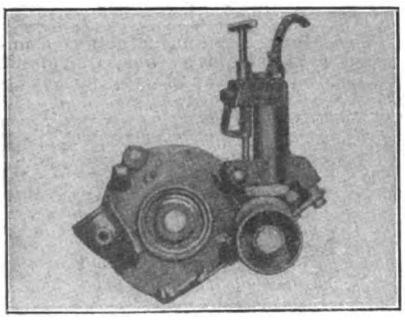
UNIQN AIR PUMP.

Motor Driven Tire Pump Permanently Attached to Ford Motor.

The Pittsburg Auto Equipment Company, Pittsburg, Penn., is manufacturing the Union motor driven air



pump for the model T Ford automobile, which should appeal to owners of these cars desiring a power tire pump. The device is permanently attached by removing two bolts and the lower fan pulley, and substituting the bolts and pulley supplied with the Union equipment. The maker states that there is no drilling or machining to be performed and that the parts are accurately made.

The pump is brought into operation only when the guide rod is depressed, and it is stated that it will pump up any Ford tire to a pressure of 60 pounds in 75 seconds. To throw the pump out of operation the guide rod is lifted and secured in position by a keeper. With each Union pump are supplied 11 feet of the best high pressure air hose, nipple and valve connections. The material and workmanship are first-class in every respect. It sells for $8.

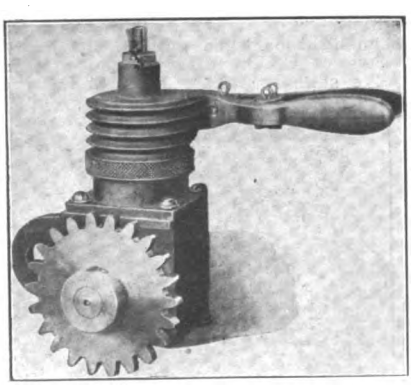
MANZEL POWER TIRE PUMP.

Designed Particularly for the Ford Car and Is Very Compact.

The Manzel Bros. Company, 335 Babcock street, Buffalo, N. Y., has brought out an engine driven tire pump for the model T Ford automobile. This concern specializes in power driven pumps, and the new design is constructed of the same high-grade material and workmanship for which the products of this concern are noted. The Ford pump is moderately priced.

The pump is installed on the left hand side of the motor, and the support for attaching it is included in the equipment. The maker states that anyone can install it in 45 minutes, and there are no holes to be drilled or machine work to be performed. The pump is an all-metal construction, and all its parts are accurately ground.

The old fan pulley is discarded and one carrying a gear is utilized. This gear is the driving member, meshing with a gear on the shaft of the pump. A convenient handle is provided for throwing the gears into mesh, and the equipment includes hose, etc. The pump supplies pure air, free from any lubricant, and the maker states it will inflate a tire in 90 seconds. It retails for $7.50.

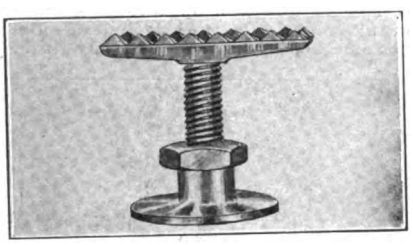


THE FUQUA REST.

A Practical Support for the Foot of the Driver of the Car.

The Fuqua foot rest is the invention of T. C. Fuqua and is manufactured by Fuqua Bros., Richmond, Va. As the name implies, it is a rest or support for the foot of the driver, and one of its advantages is that it can be adjusted to meet requirements. As may be noted by the accompanying illustration, the rest proper is attached to a threaded column, which screws into a standard. The rest is prevented from moving by a lock nut. The maker states it will fit any car with pin or lever throttle.

The Fuqua foot rest not only saves wear on the shoe and toe board of



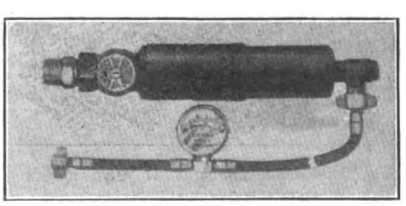
the machine, but prevents accidental or sudden acceleration when traversing rough roads. It is made in three finishes, and sells for $1.

MAYO FORD PUMP.

Screws into Valve Cap and Is Held to Be Very Efficient.

The Mayo Manufacturing Company, 53 East 18th street, Chicago, Ill., has brought out a power tire pump for the model T Ford automobile. The pump is designed to be screwed into the valve cap after the spark plug has been displaced.

The pump is compact, and pumps pure air to the tire, and the maker states that it is impossible for any foreign matter to reach the inner tube. The equipment comprises suitable length of high-grade flexible hose, and a pressure gauge is incor-



porated in the line. It is stated that the pump is very efficient, and that it will inflate a tire in a very short time. The company also manufactures a quick detachable type of spark plug, which can be removed by a slight motion of the hand. The device is so constructed that the pump locks into the opening obtained.

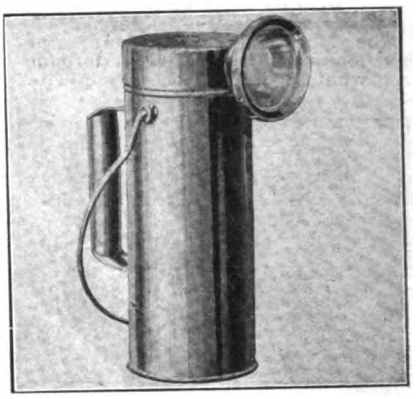
POWER TIRE PUMPS.

One of the more recent developments in the accessory field is the perfection of the power tire pump. Several manufacturers are specializing on an equipment for the used motor vehicle, and in practically every case the pump comes complete with fittings and can be easily installed.

DELTA ELECTRIC HAND LAMP.

Includes Battery and Dry Cell, and Has Two Handles.

The Delta Electric Company, Marion, O., maker of electrical specialties, is manufacturing the Delta



electric hand lamp, which will appeal to motorists whose cars are not equipped with an electric lighting system, as the lamp affords means for illumination when making adjustments about the car and when it is not advisable to use a light having a naked flame.

The lamp is equipped with a double-convex ground and polished lens, which, with a special reflector, diffuses the light, making it adaptable for service where the rays are not to be thrown a long distance. The battery is contained in a nickel plated cylindrical body, has a bail handle, also a grip on the back.

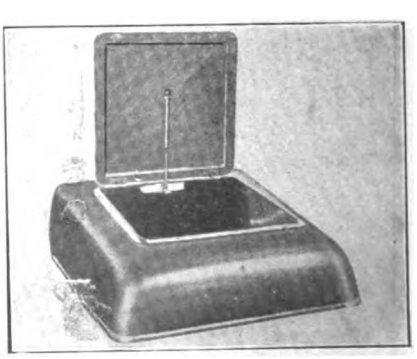
One of the desirable features of the construction is that a single dry cell is employed, and the maker states that the bulb is very economical of current. The Delta lamp is very compact and may be stored easily in the tool box. When the service of a trouble or inspection lamp is desired, the Delta will save time, as there are no connections to be made.

STEWART PERFECT LOCK.

A Device with Fastening for Holding up Cover of Deck on Ford Car.

A practical device, one that should appeal to owners of the model T Ford roadster, is the Perfect lock, manufactured by the Stewart Specialty Company, 79 East Chestnut street, Columbus, O. As may be noted by the accompanying illustration, it holds up or opens the lid of the rear deck of the car, which is a decided convenience when parcels are to be removed or articles placed in the compartment.

The device can be installed without drilling, only a wrench being necessary. Although made for the Ford, it will fit other makes, and one of its advantages is the provision afforded for a lock. The Perfect lock sells for $1.50, the holder for 50 cents.

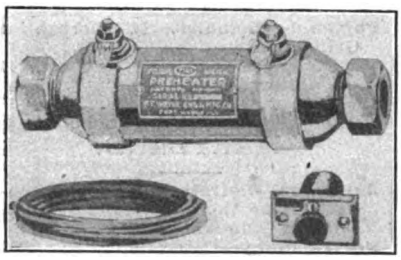


Digitized by Google

PAUL CARBURETOR HEATER.

Warms Air by Electrical Current, Making Starting Easy.

The Fort Wayne Engineering & Manufacturing Company, Fort Wayne, Ind., is marketing the Paul



carburetor air preheater, a device for making easy the starting of a cold motor in low temperatures. Use is made of the heat of electricity.

The preheater is incorporated in the tubing or coil conveying the heated air from the exhaust manifold to the air intake of the carburetor. By pressing a button the current heats the device, and when the motor is cranked warm air is drawn into the carburetor, assisting in the vaporization of the cold fuel. The complete equipment includes the heater, 15 feet of wire, a cowl switch and instructions. The preheater will operate on any six-volt current. It lists at $8.

ECONOMY GASOLINE DEVICE.

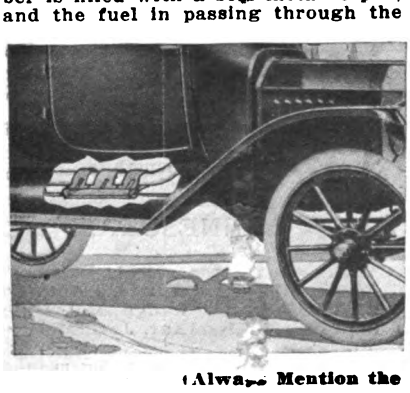
Utilizes Heat of Exhaust to Warm Fuel and Is Practical.

The Inst Lighter Company, Columbus, O., which has been specializing in motor vehicle specialties for a number of years, has brought out the Economy gasoline improver for the Ford and other cars. The device presents a number of interesting, as well as practical features and, as the name implies, increases the mileage obtained with a gallon of fuel.

The principle involved is that of utilizing heat to warm the fuel, thereby assisting in vaporization. Another advantage of the use of heat, one that is being recognized by many motor vehicle manufacturers, is that a more perfect mixture is obtained, one that is completely and quickly burned in the cylinder.

A desirable quality of the Economy gasoline improver is that it can be installed on the Ford car, for example, without disturbing the fuel line or carburetor. The maker claims that it can be attached in less than 10 minutes by the novice, the work involving but the placing of the device on the exhaust pipe and tightening two bolts retaining the sections in place.

The heat of the exterior walls of the exhaust pipe is utilized, it being conducted to the walls and interior of a cylindrical chamber, through which the fuel pipe runs. This chamber is filled with a soft metallic pad, and the fuel in passing through the section of the enclosed pipe is heated. The Economy is eight inches long and three wide and, as previously stated, can be attached without displacing or cutting the exhaust line. It sells for $2.35.



WARNER SLEEPING BLANKET.

Practical Equipment for Touring, and Affords a Lap Robe.

The Perkins-Campbell Company, Cincinnati, manufacturer of motor vehicle specialties, including seat covers, etc., is marketing the Warner hooded water proof sleeping blanket and lap robe. It consists of a heavy blanket of wool on the inside for warmth, and of water proof duck on the outside.

It may be utilized as a lap robe or as a sleeping blanket when camping. One corner of the construction is so arranged that by drawing a cord a hood is formed for protecting

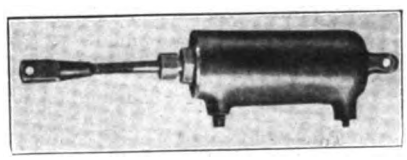
the head, as shown in the accompanying illustration. When used as a sleeping blanket it is possible to so fold it that one is completely protected from the weather. Means are provided in the hood for obtaining ventilation without exposing the user to the rain. It retails for $16.

SCHOOLER CLUTCH CHECK.

Operates on Hydraulic Principle and Prevents Harsh Engagement.

The O. E. Schooler Company, Webb City, Mo., is manufacturing a device termed the Schooler hydraulic clutch check. It is designed to eliminate any harsh action of the clutch, and is adaptable to both pleasure and commercial vehicles. The maker states that it works equally well with a cone or disc clutch and that, with it, it is impossible for a clutch to engage harshly.

It operates on the hydraulic principle and two adjustments make it adaptable to any type of clutch. The maker states that the Schooler device will not retard the action of the clutch, except at the actual point of engagement, and that it operates efficiently. The device weighs but 4½



pounds and is attached to the clutch pedal under the floor boards. Any experienced mechanic can install and adjust it in two hours and, after fitting, the maker states it will not require any further attention. It sells for $10.

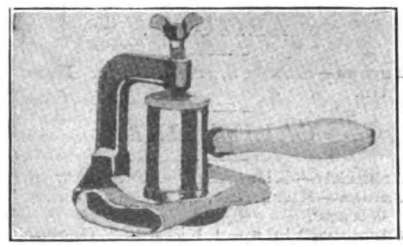
RUFF-FORD ATTACHMENT.

The Tire Trading Company, 50 William street, Newark, N. J., is manufacturing the Ruff-Ford power transmitting attachment, which enables the owner of the machine to employ the energy of the motor in a number of useful ways. The maker states that it can be attached easily and without any alterations to the motor, and that it will not interfere with the operation of the car.

QUICK ACTION VULCANIZER.

Electric Device Utilizing Current from Lighting Circuit, Etc.

The production of vulcanizing equipments, especially of the portable type, has been responsible for a large



number of motorists undertaking repairs to tires and inner tubes. The types designed for the owner are easily and successfully operated and, as a rule, do not require a knowledge of the principles of vulcanizing to accomplish good work.

Henry T. Adams & Co., Chicago, Ill., has brought out a new type of vulcanizer which presents interesting features. It is of the electric form, and it is stated that it will operate efficiently from any 110-volt lighting circuit, or from the lamp socket of a motor vehicle equipped with electric lighting. It is also stated that the current generated by the Ford flywheel magneto may be successfully employed to operate the vulcanizer.

The Quick Action vulcanizer, as it is termed, permits of making repairs on the road, as well as in the garage, and is held to be very efficient for vulcanizing casings. It is stated that a repair can be made in 20 minutes. The vulcanizer is fitted with an automatic heat regulator, preventing burning, and it is claimed that a repair can be made to an extra casing or tube when the car is in motion, as the device draws but little current.

JAEGER NITROS LAMP.

Filament Is Surrounded by Nitrogen and Other Inert Gases.

The H. J. Jaeger Company, Hoboken, N. J., is introducing a new type of bulb for electric headlights. The "Jaeger Nitros", as it is termed, has a filament of drawn tungsten wire. It is coiled into a helix, and is mounted in a very small space, thus concentrating the light and affording a much closer focal adjustment than is obtained with conventional designs.

The new lamp differs from ordinary types in that the filament, operating in a vacuum, is surrounded by nitrogen and other inert gases introduced under pressure. It is stated that the presence of these gases permits of heating the filament to a much higher temperature without affecting it, and that a more efficient light is obtained without extra cost. The H. J. Jaeger Company will supply complete details and prices upon request.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

No. 14,826. Petroleum, Gas Oil and Gasoline—A consul in Europe reports that a firm in his district is in the market for a large quantity of petroleum; price per barrel and information as to density and illuminating power requested; also gas oil for Diesel motors and gasoline. References furnished. Correspondence should be in English. Cash against documents if prices are suitable.

No. 14,937. Automobiles, Motor Trucks, Etc.—A consul in Europe states that a business man in his district wishes to establish commercial relations with American manufacturers of motor trucks, automobiles and accessories. Will buy three or four passenger cars and trucks, a stock of tires and other accessories. Descriptions and prices of moderate-priced cars of good quality are desired. References given.

No. 15,002. Automobile Accessories, Etc.—An American consular officer in Europe has been informed by a firm of wholesale dealers in automobile accessories and supplies that it is anxious to make agency connections with American manufacturers of all articles connected with the automobile trade, sporting goods and sewing machines. The firm states that it is, at present, a buyer of men's heavy shoes, water proof clothing and woolen goods.

No. 15,007. Cement and Automobile Tires—A Portuguese importing firm informs an American consular officer that it is in the market for large quantities of yellow and white cement and automobile tires for its branch house in South America. Prices f. o. b. New York or c. i. f. South American port are desired. Correspondence may be in English. New York City reference is given.

No. 15,023. Motor Cars—An importer in South America informs an American consular officer that he desires to be put in communication with American manufacturers of low-priced motor cars, or cyclecars. Manufacturers are requested to submit catalogues or specifications and lowest export price, f. o. b. New York, or c. i. f. destination.

No. 15,075. Motorcycles—A general importer in Europe advises an American consular officer that he desires to secure information relative to motorcycles. Correspondence and catalogues should be in Spanish, and extra copies should be sent to the American consulate. The importer states that he desires to represent American firms in any line of export or import business.

No. 15,077. Motorcycles, Coal, Coke, California Fruit, Etc.—A business man in southern Europe advises an American consular officer that he wishes to import motorcycles, coal, coke and California fruit products. Catalogues and correspondence should be in Spanish, and duplicate copies of the catalogues sent to the consulate.

No. 15,079. Motorcycles—A dealer in Europe advises an American consul that he wishes to secure full particulars regarding American motorcycles. Correspondence and printed matter should be in Spanish and duplicate copies of the catalogues should be sent to the American consulate.

No. 15,152. Lubricating Oil, Etc.—A dealer in Spain advises an American consular officer that he desires to communicate with American exporters of lubricating oil and other lubricants. Prices, together with samples, should be sent at once. Correspondence may be in English.

No. 15,167. Bicycles and Accessories, Ammunition, Etc.—An American consular officer in the Far East reports that a dealer in his district desires to secure the names and addresses of American manufacturers of sporting goods. He requests catalogues, etc., of bicycles, bicycle tires, bicycle accessories, shot, paper cartridge cases for sporting guns, and steel and leather supplies for hunters.

GRANT BRINGS OUT A SIX.

Selling for $795, It Is One of Lowest Priced on Market.

SELLING for $795, the Grant six is one of the lowest priced six-cylinder cars on the market. Aside from the big feature of the price, the Grant Motor Company,

Three-Quarter Side View of the New Grant Six, Which Is Equipped with Electric Lighting and Starting.

Findlay, O., has produced a valve in the head design, which is being made in both five-passenger touring and two-passenger roadster models. The new car presents many innovations from a mechanical standpoint.

The Grant six employs a unit power plant with three-point suspension, and the motor, cast en bloc, has a bore of 2⅞ inches and a stroke of 4¼. The overhead valves are operated by drop forged rocker arms. The carburetor is located on the left side of the motor, and the exhaust manifold is on the right side. The under pan of the motor is of cast aluminum, with a stamped oil plate with troughs for the connecting dippers. The oil level indicator, consisting of a ball operated by means of a float in a glass tube, indicates the oil level in the pan. The circulating oiling system is employed, oil being furnished by a plunger driven pump off the camshaft, drawing oil through a strainer from the under pan and forcing it through a self-cleaning oil gauge on the dash. An overflow pipe leads to the old gauge to the gear case compartment. The Allis-Chalmers system of lighting and starting is made use of in the new Grant six. The motor-generator operating on six volts with a small torque, is carried on the right side at the forward end of the engine. The normal rate of cranking is 198 revolutions a minute, drawing about 90 amperes at this speed.

The controller is the Briggs-Stratton double-reed type with automatic cut-out, incorporated with a single fuse for the light and horn circuits. The starting switch is operated by pressing the clutch pedal to the limit of its travel. The cut-out closes at eight miles an hour and, as the speed of the car increases, the first reed on the regulator cuts in and controls the current so as not to exceed 12 amperes. As the speed increases further, the second reed still further controls the current, affording a slightly tapering change as the speed of the generator increases. This control is held to be very efficient, and the charging rates make for increased life of the battery.

This new regulator embraces a number of novel features, among which are rotating contact points. The light switch also controls the ignition and gives the positions, off, dim and bright. Dimming is obtained by the use of double-bulb headlights. The Atwater Kent system of ignition with automatic spark advance is used, being driven by means of spiral gears off the camshaft. The front springs are semi-elliptic and cantilever springs are used in the rear. These, it will be noted in the photograph herewith, are attached to the frame member at two points.

The Grant equipment is complete in every detail, including electric horn, robe rail, foot rail, floor mats, extra demountable rim and rim carrier on the rear, speedometer, tire pump, etc.

PREMIER HAS NEW MODEL.

Known as 6-50, New Car Will Sell for Less Than $2000.

A NEW single six-cylinder chassis, to which may be fitted two body types, a touring, termed the Sextette, and a two-passenger roadster, is the latest offering of the Premier Motor Manufacturing Company, Indianapolis, Ind. Both models are of the latest streamline design, and this is accentuated by the V shaped radiator. The new 6-50 Premier will sell for considerably less than $2000.

The new motor has a bore of four inches and a stroke of 5½, and although the S. A. E. formula gives its speed at 38.6 horsepower, the maker states that it will develop 55 at 1000 revolutions a minute and 100 at 1950 revolutions a minute.

The cylinders are cast in triplets and have ample water jackets, assuring efficient cooling under all conditions of service. The valves are located on the right, have a diameter of 2½ inches, and are interchangeable. The design makes for quiet operation, and provision is made for adjustment. The connecting rods are 12½ inches from centre to centre, and the large end bearing is two inches in diameter.

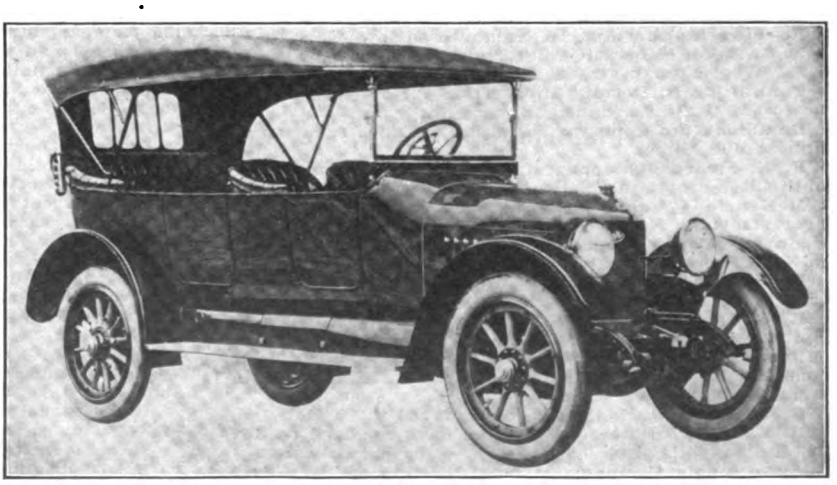
The crankshaft is two inches in diameter, the camshaft 1⅛ inches, and the camshaft bearings are ample in size, the front being 1¾ inches long and the others 1⅛. The exhaust manifold is placed on the right hand side of the motor, with the intake on the opposite side.

Particular attention is directed to the intake manifold, which is in the form of a ram's horn. It is constructed in three sections, flanged and secured by bolts. The lower section has three outlets on either side of the carburetor, or six in all. The carburetor is located between the two lower sections, and the mixture passes upward, then flows to the right and left through the horns. This arrangement brings the manifold in proximity to the top of the cylinders, where the heat assists in obtaining a homogeneous mixture. The carburetor is the latest type Rayfield.

The lubrication is by a combination force feed and splash. Individual troughs under each connecting rod supply the splash feature and, as the level is maintained regardless of grades, etc., smoking is reduced to the minimum.

The cooling is by a V shaped honeycomb radiator having a detachable core. The core is enclosed in an aluminum casing, and the maker states that it is an advantage in that, as the core does not touch the casing, it is not affected by undesirable stresses. The twists and strains to which the frame may be subjected are transmitted to the casing. Another advantage claimed is that the radiator is easy to repair and at a minimum of expense.

The Remy six-volt lighting starting and ignition system is utilized, the generator being located at the left hand forward end of the power plant and the drive is by a shaft through a flexible coupling. Motor and gearset are mounted as a unit on three-point suspension.



The Premier Touring Car, Termed the Sextette—It Has Divided Front Seats and an Aisle Between Them.

REPORTED CHANGES IN TRADE ADDRESSES.

Sealo Tire Company, Chicago, Ill., from 1409 Michigan avenue to 1120 Lytton building.

Dunham Automobile Company, Louisville, Ky., from Box 565 to 1361 South 15th street.

Pioneer Motor Car Company, Sioux City, Ia., add Chicago House.

Cobb Machine Shop, Cleveland, O., from 2513 Vermont avenue to 2935 Detroit avenue.

Buick Automobile Company, Van Wert, O., from South Market street to 703 West Elm street, Lima, O.

F. C. Flickner, Los Angeles, Cal., from 374 East Colorado street to 536 Golden Gate avenue, San Francisco, Cal.

Cowhert Fletcher, Jr., Kansas City, Mo., from 3296-10 Troort street to 116 Morningside avenue.

R. H. Combs, St. Louis, Mo., from 3685 Olive street to Box 892, Indianapolis, Ind.

Eleventh Street Garage, New York City, from 11 East 11th street to 290 Delaney street.

D. H. Dinaher, New York City, from 204 West 80th street to 615 West 135th street.

E. N. Court, New York City, from 434 Madison avenue to 61 South Washington square.

Dutee W. Flint, Providence, R. I., from 17-19 Snow street to Allens avenue and Sherburne street.

C. H. Penniman, Quincy, Mass., from Washington street to 8 Nubird street.

Liberty Auto Company, Springfield, Mass., from 28 Hampden street to 22 Broadway.

William K. Bush, Detroit, Mich., from 31 Woodward avenue to 119 Pingree avenue.

Congress Garage, Detroit, Mich., from 65-69 Congress street to 348 Frederick street.

Chicago Pneumatic Tool Company, Detroit, Mich., from 547 Woodward avenue to Second and Amsted avenue.

H. E. Chase, Detroit, Mich., from 628 East Fort street to 190 Jos Campan street.

Preston Auto Company, Franklin, Ind., removed to Lebanon, N. H.

Willy Machine Company, Jeffersonville, Ind., removed to 93 Park street, Oshkosh, Wis.

Auto Repair and Storage Company, Pittsburg, Penn., from 5713 Pennsylvania avenue to 5710 Harvard avenue.

John Reynolds, Graysville, Penn., removed to Tyrone, Penn.

Tyson's Garage and Repair Shop, Philadelphia, Penn., from 765 Marks avenue to North Wales, Penn.

Public Motor Car Company, Dayton, O., from Second and Ludlow streets to 8811 Detroit avenue, Cleveland, O.

Nasser Garage, Toledo, O., from 11th street to 2414-16 Collingwood avenue.

Charles J. Clapp, Toledo, O., from 1502-4 Madison avenue to 1002 Madison avenue.

Maxwell-Briscoe Toledo Company, Toledo, O., from 1002 Madison avenue to 1402 Madison avenue.

Gauntlett Auto Sales Company, Toledo, O., from 1016 Madison avenue to 1015 Jefferson street.

W. E. Evans, Columbus, O., from 169 North Fourth street to 208 East Gay street.

W. L. Rudd & Co., Chicago, Ill., add 1110 East 47th street.

Ross-Stone Company, Chicago, Ill., from 1712 Michigan avenue to 2018 Indiana avenue.

Center Motor Car Company, Salina, Kan., removed to Lindsborg, Kan.

Pope-Hartford Company, Chicago, Ill., from 1840 Michigan avenue to 16 Carruth street, Dorchester, Mass.

Agee Automobile Company, Ottumwa, Ia., 326 North Shend street to Des Moines, Ia.

C. E. Miller, Marion, Ind., from 207 South Main street to 43rd and Washington streets.

E. Warneke, Sterling, Ill., removed to Iowa City, Ia.

N. G. Baker, Muscatine, Ia., from 1363 Sherman street to 913 West Fourth street.

Paul J. Kraft, Detroit, Mich., from 527-29 Gratiot avenue to 626 Gratiot avenue.

Rambler Auto Company, Kansas City, Mo., removed to Minneapolis, Minn.

F. B. Stearns Company, Los Angeles, Cal., from 742 South Olive street to 127 South Gramercy street.

McKenzie Garage, Detroit, Mich., from 518 Grand River street to 214 Westminster street.

Murphy Power Company, Detroit, Mich., from Wayne and Congress streets to Penobscot building.

Pfeiffer's Garage, Detroit, Mich., from 220 Elizabeth street to 52 Clark court.

R. C. Stevenson, Muncie, Ind., removed to 518 North Capitol avenue, Indianapolis, Ind.

Baumer Machine & Automobile Company, Muncie, Ind., from 210 East Seymour street to rear 212 East Main street.

Green & North, Madison, Ind., removed to Patriot, Ind.

R. M. & T. M. Bowen, Owensboro, Ky., removed to Box 814, Indianapolis, Ind.

Auto Supply Company, Memphis, Tenn., add 42 South Second street.

Blomberg Automobile Company, Memphis, Tenn., from 313 Monroe street to 823 South Bellevue avenue.

E. M. F. Memphis Company, Memphis, Tenn., from 249 Monroe street to 4360 Duncan avenue, St. Louis, Mo.

Globe Garage and Manufacturing Company, Kalamazoo, Mich., from 218-20 North Rose street to 301 West Ransom street.

Motorcycle Sales Company, Cincinnati, O., from 3166 Reading road to 3152 Reading road.

C. J. Edwards, Appleton, Wis., from 734 Washington street to 1304 State street, Milwaukee, Wis.

C. C. Brooks, Los Angeles, Cal., from 951 South Flower street to 2205 Fifth avenue.

Louis F. Benton & Co., Los Angeles, Cal., from 1245 South Flower street to 161 West Colorado street, Pasadena, Cal.

J. E. Newton, Providence, R. I., from 40 Andem street to 47 Yale avenue.

Jackson Auto and Supply Company, Lynn, Mass., from 42 Whiting street to 54 Converse avenue, Malden, Mass.

Buick Garage, Kalamazoo, Mich., from 135 Farmers avenue to 406 Edwin avenue.

Motor Shop and Garage, Shippensburg, Penn., from 105 East Earl street to Emmetsburg, Md.

White Agency, Binghamton, N. Y., from 119 Conklin avenue to 184 State street.

M. Ableth, Columbus, O., from 165 North Fourth street to 208 East Gay street.

Eddy Auto Company, Cincinnati, O., from 2808 May street to 314 Government building.

Detroiter Sales Company, Cleveland, O., from 6016 Euclid avenue to 2290 East 93rd street.

Barger Auto Company, Cleveland, O., from 1628 Euclid avenue to Box 183.

Clinton Auto and Garage Company, Jersey City, N. J., from 2399 Boulevard, to 4635 Boulevard, Hoboken, N. J.

H. J. Bruner Metal and Machine Supply Company, Kansas City, Mo., from 531 Delaware avenue to 1306 Grand avenue.

Arnold Motor Car Repair Company, Kansas City, Mo., from 160 Baltimore avenue to 2109 Washington street.

Auto Salvage Company, Kansas City, Mo., from 1429 Walnut street to 1416 Main street.

F. H. Bradshar, Seattle, Wash., from 1159 Broadway to 12th and Pine street.

Arthur Wurm, Clifton, N. J., from Madison avenue to Ulsterville, N. Y.

Meyer Manufacturing Company, Newburg, N. Y., from 307 Liberty street to 232 Du Bois street.

Cust Motor Car Company, Utica, N. Y., from 29 John street to Cooperstown, N. Y.

J. H. Symond Automobile Company, Niagara Falls, N. Y., removed to 2964 Main street, Buffalo, N. Y.

Fenner & Skeece, Niagara Falls, N. Y., from 619 Erie avenue to 30 Niagara street.

C. L. Whiting, Rochester, N. Y., from 591 East Main street to 342 East avenue.

Apperson Motor Car Company, Seattle, Wash., from 907 East Pike street to Kokomo, Ind.

Cycle Car Company, Buffalo, N. Y., from 1192 Niagara street to 311 Sixth avenue, Asbury Park, N. J.

Herse Auto Company, Brooklyn, N. Y., from 701 Quincy street to 41 Eldert street.

A. H. Regenhard, Brooklyn, N. Y., from 214 Flatbush avenue to 44 Court street.

G. M. Williamson, Brooklyn, N. Y., from 117 Madison street to 421 Greene avenue.

United States Tire Company, Phoenix, Ariz., add Box 756.

New York Garage Company, New Orleans, La., from 8131 Apple street to 2041 Laurel street.

Kinch Automobile Company, New Orleans, La., from 135 Rampart street to 852 St. Charles street.

Charles and Earl Curris & Co., Louisville, Ky., from 206 Coleman building to 116 North Second street.

Inter-State Sales Company, Louisville, Ky., from 437 South Second street to 809 East Spring street, New Albany, Ind.

Carter & Logan, Jacksonville, Fla., from 662 East Bay street to Box 118.

Kettel Brothers, Jacksonville, Fla., from 11 West Forsythe street to 107 West Fifth street.

Calumet Garage, Milwaukee, Wis., from 1825 Fond du Lac avenue to 322 Lee street.

Theodore Bouroe, St. Louis, Mo., from 309 South 12th street to 1431 Franklin avenue.

Broadway Garage and Sales Company, Kansas City, Mo., from 311 West 34th street to 3401 Broadway.

Goodyear Tire and Rubber Company, Houston, Tex., from 1118 Main street to Box 1383.

Orlo Manufacturing Company, Louisville, Ky., add 437 South Second street.

Crary Gasoline Lock Company, Detroit, Mich., from 741 Woodward avenue to 650 Woodward avenue.

Harght Auto Lighter Company, Lansing, Mich., removed to Orlando, Fla.

Hurlburt Motor Truck Company, New York City, from 569 Fifth avenue to 197th street and Amsterdam avenue.

IECO MANIFOLD PLUG.

Vaporizes Gasoline by Electricity, Providing a Hot Vapor, One Making for Easy Starting.

The Interstate Electric Company, 362 Baronne street, New Orleans, La., manufacturer of electrical specialties, is producing the Ieco manifold plug, which is an inexpensive electrical device for so raising the temperature of the gasoline that starting is made easy. As may be noted by the accompanying illustration, which shows the general arrangement of the Ieco device, the plug is inserted in the intake manifold. The fuel is supplied to the plug by means of a priming cup on the dash. Connected with the plug is a battery, and control of the current is by means of a switch conveniently located on the dash. To start the motor the plug is primed and the switch operated to cut in the current which heats the fuel. The temperature obtained is such that a hot vapor is secured, one that is easily ignited when the motor is cranked. In addition to being of service for starting, the priming cup on the dash may be utilized for admitting extra air to the mixture. It can also be employed for introducing kerosene into the cylinders. Details and prices of the Ieco will be supplied upon request.

MUELLER SOCKET WRENCH.

A Telescopic Design for Replacing Ordinary Types and Capable of Handling Variety of Work.

L. Mueller, 1719 Central avenue, Cincinnati, O., is manufacturing the Mueller telescopic socket wrench shown herewith, and which is designed to take the place of the ordinary type employing a number of loose sockets, and it will handle all sizes of both hexagon and square nuts for ⅛ to ⅝-inch bolts. The tool is not only compact, but it eliminates loose parts.

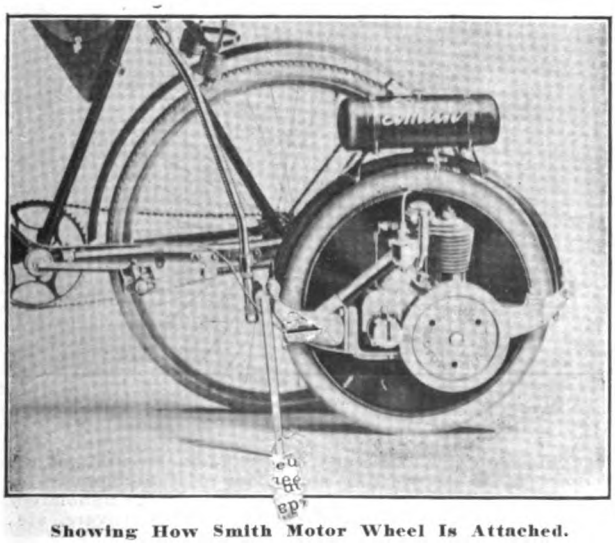
One of the telescoping sockets is shown at A in the accompanying illustration. The movement of the sockets is controlled by the knobs B, which are fastened to the washers C. The knobs work against the tensions of the springs D and are a sliding fit on the pins E, which are placed crosswise in the sockets. To bring out any required socket, the knob B is pressed down until the flat portion just below the shoulder comes in line with the narrow slot F in the wrench. The knob can then be advanced to the next circular opening, so that the socket is brought out ready for service. On relieving the pressure on the knob B, the spring D forces the knob out into the circular opening, thus holding the socket in place. The method of swivelling the wrench to bring either end into action is shown by the illustration.

SMITH MOTOR WHEEL.

A Complete Power Plant Readily Fitted to an Ordinary Bicycle and Obtaining a Motor Vehicle.

The A. O. Smith Company, Milwaukee, Wis., has brought out a novel motor wheel that should appeal to those dealers carrying bicycles in that the equipment is a complete power plant that may be readily fitted to the rear wheel of any bicycle.

As may be noted by the accompanying illustration, which shows the motor wheel in position, the Smith includes a one-cylinder, four-cycle motor, carburetor, fuel tank and a true high-tension magneto. The bore and stroke is 2¼ inches and the maker states that the engine will develop a full horsepower and is capable of obtaining 100 miles to a gallon of fuel on ordinary roads.



Showing How Smith Motor Wheel Is Attached.

One of the features of the Smith motor wheel is that it can be readily attached. Details and prices of the device will be supplied upon request.

J & B TRANSFORMER COIL.

Adaptable for Service with All Makes of Low-Tension Magnetos, and Is Liberally Guaranteed.

The J & B transformer coil is the product of the J & B Manufacturing Company, Pittsfield, Mass., and is designed for service with any make of low-tension magneto where the primary current has to be intensified. The maker states that the transformer draws but little current, and that this is an important factor where batteries are utilized for starting the motor. The windings are thoroughly insulated, and a safety gap is incorporated to prevent damage to the secondary windings. A starting button is one of the features of the coil, which has a kick type of lever. The platinum points are large and maximum service is guaranteed. One of the features of the coil is that no wires enter the switch, all connections being made by the screws which retain the switch in place. The box is of heavy mahogany and the entire construction is built to last. The guarantee is very broad. Details and prices will be supplied upon request.

J & B Transformer Coil.

AUTOMATICALLY STOPS LEAKS.

"X" Liquid Will Mend All Radiators, Mixes Readily with Anti-Freezing Solution and Prevents Scale.

A liquid preparation for mending leaks in the radiator has been perfected by the "X" Laboratories, 630 Washington street, Boston, Mass. One of the desirable qualities of the "X" liquid is that it will mix with the anti-freezing solution. Another advantage is that it is left in the radiator and should a new leak develop, the liquid will instantly seal it. Scale and rust are prevented by "X" liquid, which is sold under a money back guarantee. The preparation will be exhibited at the Boston show. Details and prices will be supplied by the maker upon request.

MOSSBERG PRODUCTS.

New Catalogue, Describing Socket Wrenches, Etc., Now Ready for Distribution to the Trade.

Announcement is made by the Frank Mossberg Company, Attleboro, Mass., the well known maker of wrenches, etc., to the effect that the new catalogue No. 141 A is ready for distribution. The company is offering a number of new tools at attractive prices, and these, as well as the standard, are described and illustrated in the new book which will be sent free to any address upon request.

The Bowling Green Sales Company, 42 Broadway, New York City, is marketing the Ball carbon remover which has proven a good seller. It is a chemical compound put up in a convenient tablet form, and with it it is possible to displace carbon deposits from the motor without removing the cylinders.

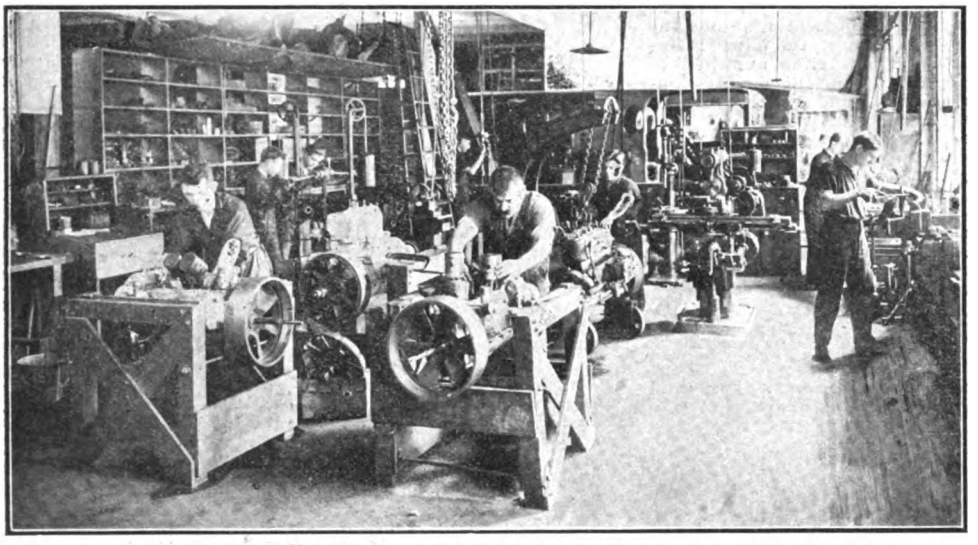
DEPRECIATION ELIMINATED BY UPKEEP.

WITH an enormous business practically dependent upon its delivery service, and meeting competition that is extreme, Gimbel Brothers, a New York City department store firm, has developed its transportation department with extreme care. The equipment used represents a very large investment, and the operating cost is necessarily a material item, so that economy is the prime essential, although the vehicles must be maintained at a high standard, both in appearance and efficiency.



Partial View of Gimbel Brothers' Garage, Showing Different Stages in the Work of Rebuilding Trucks.

The statement that the delivery service is not excelled, and is rarely equalled, is not too broad a statement. The vehicle equipment consists of 138 vehicles, of which 85 are electric and 53 are gasoline, of different capacities, which are used for delivery, transfer and haulage. The garage, or service station, at 513 West 24th street, was originally built to house electric machines exclusively, and when constructed, three and a half years ago, it was regarded as the best development of a station of this kind in America.

This station affords the facilities for maintaining the vehicles, although it is congested by the large increase of machines since it was built. The transportation department is an admirable organization, and for the convenience of description it has been taken as two divisions, one of which may be regarded as the shipping, and the other as the garage, both of which are under separate supervision, each executive being responsible for the efficiency of his department.

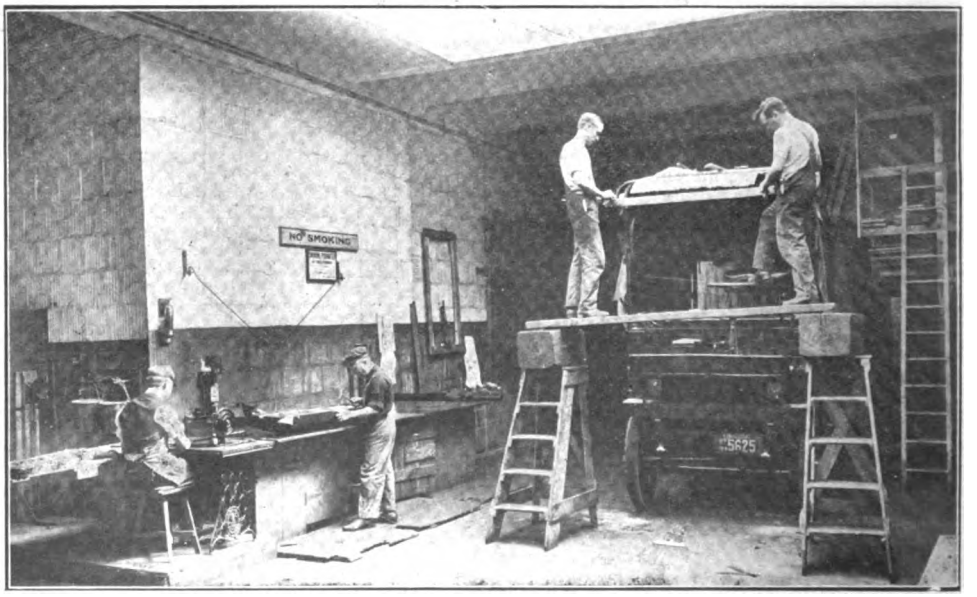
The operation of the garage has been splendidly systematized by Manager Duerr, and very high efficiency is obtained at what may be said to be minimum expense through the method of maintenance that practically eliminates depreciation. One must understand that appearance is highly valued. The equipment must be kept to a high standard, so as to have the units serviceable at all times, and economy must always be considered.

With practically all motor vehicle services the policy is to charge depreciation in the operating cost, and to assume that at the expiration of a period any machine will no longer be serviceable—that it must be replaced from the sinking fund created from the depreciation charges, or by funds taken from capital. But Manager Duerr has established that this theory is all wrong—that a vehicle that is originally well constructed, with a standard body design, can be maintained at its highest efficiency practically and literally equal to all service requirements at an expense that is materially less than is represented by the depreciation charged. In other words, a machine will last an indefinite period, and with systematic upkeep the life is whatever the owner wishes to make it.

This may appear a radical opinion, but it has been proven by experience, and the company has never disposed of a machine. What is bought is meant for service, and service is obtained, but there is no intention of loss through lack of care. To illustrate: The garage is complete. Any work can be done there, for the stock, the material, the machine and hand tools and the workers are instantly available. Trucks and wagons can be built there as well as maintained, if necessary.

Once each year the machines are rebuilt. Instead of what is known as an "overhaul", such as is ordinarily given, the trucks and wagons are disassembled and each part, large or small, cleaned, examined and inspected. The chassis frame is stripped and reriveted if need be. Nothing is taken for granted. The vehicle must be as good as new when rebuilding is completed. This process takes about a week. The rebuilt truck is carefully tested and when it is again used it is believed to be in readiness for a year's service. While the chassis is in the shop the body is refinished. Several weeks are necessary to do this work, and as the bodies of any one type are interchangeable, one of the several spare bodies is installed and service of the chassis is continued.

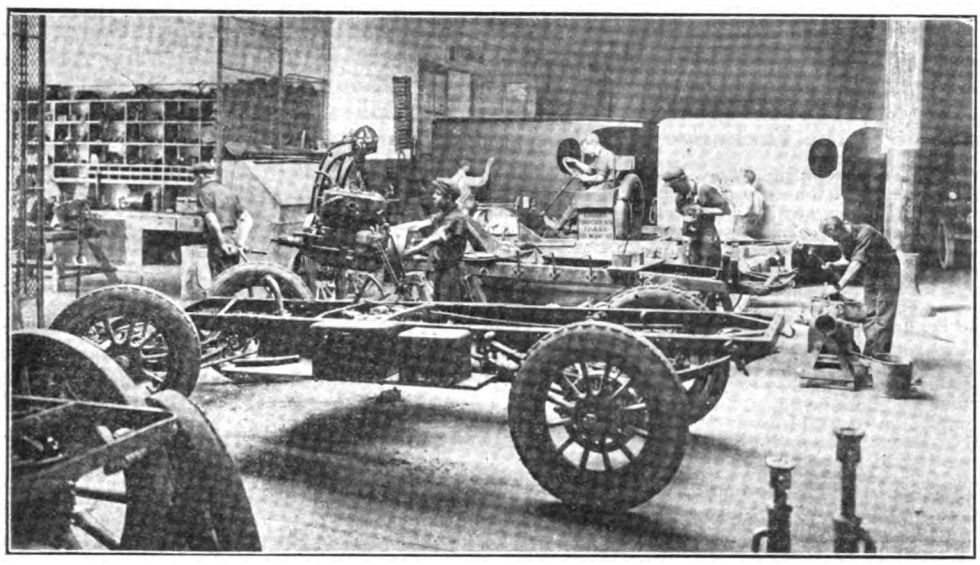
The shop is on the second floor of the garage building. The machine tool room is thoroughly equipped for any work. The stock of parts for each size machine is sufficient to meet any demand and an emergency work can be done quickly and well, but this is not the subject of this article. In the shop from three to four motors are usually in the hands of the machinists. Chain hoists, trolley hoists and cranes make handling easy, and the machine tools are especially adapted for the work of the shop. The wood working shop does all the repairing of the bodies and the metal equipment. The upholstery shop repairs or replaces all cushions, seats, covers, etc.,



The Rebuilding Includes Renewals of Every Part, Even to Roof Covering and Upholstery, and There Are Facilities to Do Any Work.

Digitized by Google

and it even has a sewing machine driven by an electric motor for stitching leather and heavy fabric. The painting department has a varnish room, where the bodies are finished after painting.



Where the Gasoline Motors Are Rebuilt—The Engines Shown Include One Just Removed from a Chassis and Still on the Crane, One Ready for Installation, One Disassembled and One Partly Assembled.

The machines are not worn to any material extent. They are completely restored before any deterioration is manifested. In a recent inspection of the garage and the machines, 29 White wagons and trucks were seen, which included a 1500-pound vehicle three and a half years old that had just been rebuilt. It could not be distinguished from those that were just placed in service, either in appearance or operation, and aside from its number one would not believe from examination that it had been used to an extent when most owners would doubt its value. Yet, from the Gimbel viewpoint, it is the equal to the new—at least it is just as serviceable and as good as any of the same size for Gimbel purposes.

The machines, when delivery is taken, are first given a careful mechanical test over a measured course. One route, for instance, is north on Tenth avenue to Broadway, up Broadway to the 129th street ferry, to Edgewater, N. J., up Fort Lee hill, south on the boulevard to the 42nd street ferry, and south on Tenth avenue to the garage. The inspection report must be signed for the company building the machines, and for the Gimbel Brothers by the companies' inspectors, by the shop superintendent and the garage manager, this covering every assembly and important detail of construction and operation, even to the painting and the tool equipment, the ferry charges, and also shows the consumption of gasoline or current.

This record must show the vehicle meets all the requirements, not only as to construction, to appearances and to equipment, but its power must have been proven on the Fort Lee hill and it must show a consumption of fuel that is within the volume regarded as a standard before the machine is accepted. When a wagon or truck is rebuilt it is just as carefully tested.

The machines are used continuously but they are never overloaded and they are adjusted and repaired whenever there is indication of either work being needed. Exceedingly careful record is kept and from this extremely valuable information is instantly available for the garage manager. He has placed before him each day a report that shows how many vehicles are in actual service at each garage, how many are in reserve and how many are in the shop. At a glance he can account for the entire equipment. Detail of all machines not on the road can be obtained at any minute. Every fact that has to do with work performed, with operating or maintenance cost, is recorded. In fact, record is the basis of the efficiency and economy of the service.

One of the White 1500-pound wagons is in readiness with such supplies and tools as may be needed for any work on the road. In the event of a machine being damaged by accident or failure, it is not hauled in with a plank supporting an axle, for instance. Instead, so far as possible a temporary repair is made and it is driven or towed in. Should a wheel or an axle break a spare axle or a spare wheel, for spares are always ready for such emergencies, is placed in the little White wagon, and it is sent out with men who can do the work quickly and well. When back at the garage a permanent repair or restoration is made. The drivers do no work on the machines.

In the repair shop spare wheels with tires of each size for each type of wagon are in lockers ready for use when needed. There are, to illustrate, three spare motors, two spare rear and two spare front axles and two gearsets for the 1500-pound wagons, spare rear and front axles for the 3000-pound wagons, radiators, shafts, springs, fenders, and practically every necessary part that would be required for any restoration. The stock rooms contain parts sufficient to assemble several machines. There is no need of delay for any reason. There are facilities for doing all work economically. The garage is piped for air and gas, and gas torches can be used for any purposes, from straightening a chassis frame to burning paint. There are even rivet heaters, so that the best of work can be done at any time. The shop has a blacksmithing department with men competent to do hand forging and fitting, etc.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

GASOLINE PLEASURE CAR AGENCIES.

3087—Maryland Dealer wants information relative to gasoline pleasure cars ranging in price from $300 to $400.

3088 Michigan House wants to represent a line of pleasure cars selling from $500 to $1500.

3091—Oklahoma Company is in the market to represent a line of automobiles ranging in price from $900 to $2000.

3094—Indiana Concern is anxious to represent a line of pleasure cars selling from $250 to $1000.

3097—Ohio Firm wants information pertaining to pleasure cars selling from $500 to $1000.

3099—Illinois House is in the market to represent a line of cars selling from $800 to $1200.

3103—Michigan Dealer is anxious to secure the agency for pleasure cars selling from $300 to $800.

3106—Kentucky Company wants to represent a moderately priced pleasure car.

3110—Ohio Concern wants information pertaining to a line of pleasure cars ranging in price from $500 to $700.

3113—New York Dealer is anxious to secure the agency for pleasure cars selling from $350 to $600.

3116—Indiana Dealer wants to secure the agency for a cheap gasoline pleasure car.

COMMERCIAL CAR AGENCIES.

6173—Indiana House would consider the agency of gasoline motor trucks selling from $395 to $2000.

6176—Michigan Dealer is anxious to secure the agency for gasoline trucks selling from $500 to $800.

6177—Kentucky Concern wants information relative to a line of gasoline motor trucks ranging in price from $700 to $1500.

6180—Michigan Company is anxious to represent a line of gasoline commercial vehicles selling from $400 to $1000.

6182—Oklahoma Dealer wants to hear from a line of gasoline commercial vehicles ranging in price from $1225 to $4200.

6185—Michigan Firm would like to obtain the agency for a line of trucks from $700 to $2000.

REPRESENTATIVES WANTED.

50—Massachusetts Firm wants representatives in Alabama and Tennesee. The company is manufacturer of decarbonizing and welding equipment.

52—Michigan Company, manufacturer of automobile polishes and cleansers, wants representatives throughout the United States and Canada.

57—Indiana House wants representatives in the rural districts of Ohio, Indiana, Illinois and Michigan. The company is a wholesale and retail mail order house, handling automobile supplies.

ELECTRIC PLEASURE CAR AGENCIES.

530—Oklahoma Firm is in the market to represent a line of electric pleasure cars selling from $2000 to $2900.

533—Kentucky Dealer wants information relative to a moderately priced electric pleasure car.

MOTORCYCLE AGENCIES.

137—New York Company wishes to secure the agency for motorcycles selling at $250.

141—Kentucky Dealer wants to represent motorcycles moderately priced.

146—Michigan Concern would consider the agency for motorcycles selling from $100 to $200.

147—Illinois Firm wishes to secure the agency for motorcycles selling from $250 to $350.

CYCLECAR AGENCIES.

1803—Maryland Company wishes to secure the agency for cyclecars selling from $300 to $400.

1805—New York Firm wants information relative to cyclecars selling from $250 to $400.

ACCESSORIES, EQUIPMENT, SUPPLIES.

658—Ohio Company wishes to hear concerning a line of axles, batteries, bearings, bodies, bolts, brakes, bulbs, cable, camshafts, carburetors, castings, clutches, cylinders, dashes, engines, fans, fasteners, fenders, forgings, frames, gaskets, gears, generators, headlights, horns, ignition, jacks, jigs, joints, knuckles, leather, levers, magnetos, mechanical starters, metal parts, motors, mufflers, nuts, paints, pedals, pins, pistons, plugs, printed matter, pumps, punches, radiators, reamers, screws, seats, shapers, shims, stampings, starters, steering wheels, transmissions, valves, varnishes, wheels, windshields, wire and wrenches. The goods are to be used in the manufacture of cyclecars.

662—Iowa Company is interested in fire extinguishers.

663—New Hampshire House wants shock absorbers.

666—Michigan Firm wants information pertaining to anti-rattlers, asbestos, autogenous welding equipment, bearings, bolts, brakes, bulbs, bumpers, burners, cabinets, cable, carbide, castings, cements, chains, charging apparatus, clutches, cones, controllers, cutters, cushions, dimmers, discs, drills, engines, fenders, fire extinguishers, forgings, frames, gaskets, gasoline, gears, glass, headlights, heaters, horns, hydrometers, jacks, locks, magnetos, maps, nuts, odometers, paints, pistons, platinum, pullers, punches, radiators, ratchet drills, reamers, carbon removers, rheostats, rims, screws, shims, shock absorbers, soaps, solder, speedometers, spokes, springs, steering wheels, tape, terminals, tire accessories, transmissions, tubing, vises, voltmeters and vulcanizers. The products are to be used for stock and resale.

669—New York Dealer wants carburetors, fire extinguishers, vulcanizers and wrenches.

672—Iowa Company wants cabinets for stock room, also racks, turntables and washers; the goods to be used in a garage.

676—Detroit Company wants anti-rattlers, autogenous welding equipment, batteries, belts, brakes, bulbs, bumpers, cable, carburetors, clips, clutches, couplings, curtains, cutters, dimmers, fans, fenders, forgings, frames, gaskets, gauges, generators, goggles, headlights, horns, hose, hubs, ignition, jacks, joints, knuckles, lamps, leather, levers, lubricators, magnetos, mufflers, nuts, odometers, packing, paints, pedals, pistons, plugs, radiators, regulators, rests, rims, shock absorbers, springs, stampings, starters, steering wheels, switches, tanks, terminals, timers, tops and parts, upholstery, valves, voltmeters and windshields. The goods to be used in an engineering department.

692—Maryland Dealer wants exclusive selling agency of some live automobile novelties for city of Baltimore.

693—Kentucky House is in the market for anvils, batteries, bodies, bolts, burners, cable, cans, chains, charging apparatus, cranes, fire extinguishers, hoists, maps, nuts, packing, rectifiers, rheostats, shock absorbers, speedometers, starters, tools, vulcanizers, waste, wrenches, oils, greases, recording time clocks and bodies for pleasure and commercial cars.

696—Maryland House wants air pumps, batteries, bulbs, carbide, cements, chemical tanks, dimmers, fire extinguishers, air gauges, goggles, headlights, horns, lamps, locks, plugs, pumps, rubber, searchlights, sockets, speedometers, storage systems, tape, testers, tire accessories, tires, oils and greases.

699—Oklahoma Firm wants bumpers and turntables to be used in a garage.

703—Ohio Firm wants batteries, bolts, bulbs, bumpers, burners, cabinets, cable, cases, chains, charging apparatus, commutators, cranes, doors, elevators, gauges, goggles, guns, hoists, jacks, nuts, plugs, primers, pullers, pumps, racks, rectifiers, reflectors, shafting, strainers, switchboards, switches, tanks, tape, terminals, testers, timers, tire accessories, tires, tools, turntables, voltmeters, vulcanizers, washers, washstands, waste, wrenches and recording time clocks.

MERCER ANNOUNCES NEW SERIES 22-70.

WAITING for the New York automobile show to open before announcing its 1915 models, the Mercer Automobile Company, Trenton, N. J., created quite a sensation with the new series 27-70 models. Built on one chassis, which differs only in the length of the wheelbase, four different body styles are offered: A six-passenger touring car, $3000; a four-passenger sporting model, $3000; a runabout, $2900; and a raceabout, $2750.

The two former are of perfect streamline design, and follow the Mercer practise in that they are very low, the height from the ground to the top of body varnish rail being only 45 inches. Indeed, with the top raised, a man standing on the curb can look over the car without effort. The lines from the round topped radiator slope slightly upward and, merging in the cowl, are then carried in reversed curves to the rounded back, the effect being further carried out in the full crowned fenders and rounded frame sheathing. The whole equipment is of the highest grade and in complete harmony with the general design. A one-man Burbank cloth top is used, the sloping windshield is of a special design and the wheels are wood, with Howard demountable rims for the touring car and runabout, and Rudge-Whitworth wire on the other two models.

The motor is the four-cylinder, L head type, cast en bloc, and combines light weight, high power, accessibility and economy. The bore and stroke are 3¾ by 6¾ inches respectively, the S. A. E. rating being 22 horsepower, but more than 70 having been shown on the test block. The valves are enclosed by an aluminum cover held by two thumb screws, and the carburetor is attached directly to the cylinder casting, the intake passages being cored in the block, so that the exterior is exceedingly smooth. This is further carried out by setting the magneto and water pump at the front of the motor. The camshaft is driven by a single two-inch Coventry chain, and itself carries a worm gear which actuates a cross shaft by which the pump and magneto are driven. The pistons carry two ring grooves, in each of which are fitted three 1/16-inch rings. The connecting rods are 15 inches long, but very light, and the crankshaft is exceptionally heavy, being 2⅛ inches in diameter. Plain bearings of bronze, lined with a special babbitt, are used. The valves are of high-speed tungsten steel, of good size, the clear opening being 2¼ inches. They are threaded at end for valve spring retainer, this construction permitting spring tension to be changed by turning the valve, a screw driver slot being located in the head for that purpose. The push rods, which like the adjusting screws are hollow for the sake of lightness, carry large rollers, which ride directly on the cam. The camshaft is also hollow and is carried on five plain bearings.

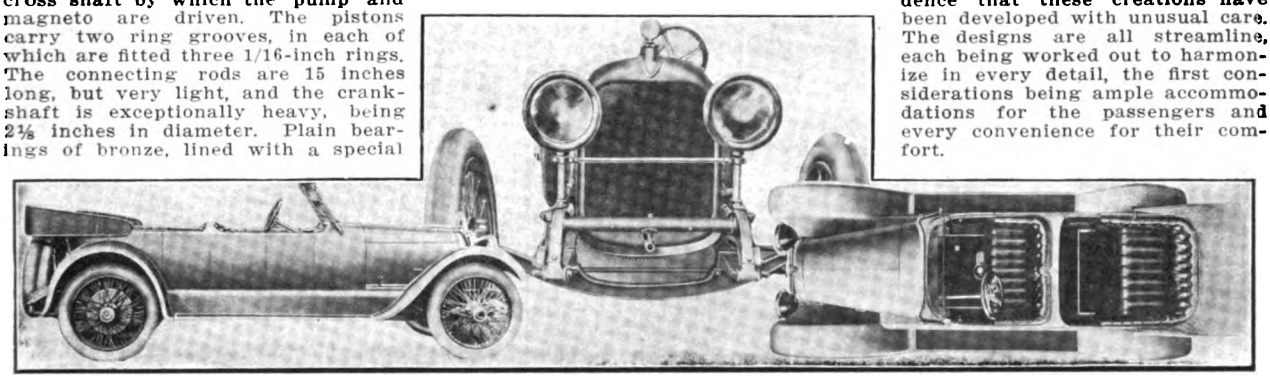
The lubrication is force feed, maintained by a gear driven pump located at the rear end of the camshaft, sending oil to all bearings at from 10 to 60 pounds pressure, according to the motor speed. There are, however no external oil pipes. The transmission is selective, giving four forward speeds and reverse, and is equipped with a locking device to eliminate danger of stripping the gears by improper shifting.

The 12-volt U. S. L. starting and lighting system is worked out especially for Mercer conditions, and consists of a special motor-generator, installed in place of the flywheel, and a 100 ampere-hour battery. This equipment is applied to all models except the runabout.

The raceabout is built with a full cowl and enclosed sides, and the speed is guaranteed at 80 miles an hour.

All of these new models are important additions to the Mercer line, and will doubtless find immediate favor. They are in accord with the established policy of the manufacturer to build high-grade, four-cylinder cars of medium weight, and are thoroughly up-to-date examples of this design, embodying style and class in their appearance, and the highest degree of reliability in their construction. Long service and economy of operation are also to be anticipated, and the requirements of the most exacting owner seem to be met at all points.

The accompanying illustrations of one of the new body types with which the Mercer chassis are equipped evidence that these creations have been developed with unusual care. The designs are all streamline, each being worked out to harmonize in every detail, the first considerations being ample accommodations for the passengers and every convenience for their comfort.



The Sporting Model of the New 22-70 Mercer Shows Perfect Streamlines, Roomy Seating Space and Gracefully Curved Radiator and Hood.

DOMESTIC CRUDE OIL PRICES.

CRUDE OIL PRICES.

The prices of crude petroleum at the wells during the middle of the month of February were as follows:

CONTEMPLATED NEW BUILDING OPERATIONS.

PLANS AND SPECIFICATIONS.

P. L. Towne, 6449 University avenue, Chicago, Ill.; one-story garage, 50x125, $10,000.

A. A. Skudstad, 554 North Leclaire avenue, Chicago, Ill.; one-story garage, 25x25.

Weimeschkirch & Son, 7066 North Clark street, Chicago, Ill.; one-story garage, 25x25.

J. M. Saylor, 362 Clinton avenue, Albany, N. Y.; eight sheds, one-story garage, 12x18, $2000.

Tremont Realty Corporation, Boston, Mass.; four-story garage, 90x115, $85,000.

Louis Kaufman, 26 Lena park, Boston, Mass.; one-story garage, 25x28.

E. C. Bartlett, 28 Grenada terrace, Springfield, Mass.; three-story garage, 60x83.

Helen P. Weaver, Mansfield, O.; one-story garage, 26x85, $7000.

Alonzo O. Bliss, 35 B street, N. W., Washington, D. C.; three-story garage, 41x40, $20,000.

Aaron Keil, Wilmington, Del.; one-story automobile show room, 35x80, $5000.

Silberman Brothers, Providence, R. I.; two one-story garages, 29x49, $7,000, and 45x50, $13,000, respectively.

George E. Wheeler, Spirit Lake, Ia.; one-story garage, 40x60, $5000.

Mrs. D. A. Hill, Webster Grove, Mo.; two-story garage, $6000.

J. H. Sternberg, 512 Gladstone boulevard, Kansas City, Mo.; one-story garage, 22x24, $2000.

C. E. Faeth, 4520 Holmes street, Kansas City, Mo.; one-story garage, 45x130, $8000.

A. L. Stocke, 2707 Ann avenue, St. Louis, Mo.; two-story garage, $6000.

Paul R. Gray, 336 Seminole avenue, Detroit, Mich.; one-story garage, 171x25 and wing, 41x75.

United Fruit Growers' Company, Sturgeon Bay, Wis.; one-story garage, 20x20.

Johnson & Miller, 610 Ohio street, Terre Haute, Ind.; one-story garage, 26x30.

Main Motor Car Company, 71 East Main street, Logan, O.; two-story garage, 40x150, $10,000.

Gill Lumber Company, 805 Hippodrome building, Cleveland, O.; one-story garage, 34x46, to be erected at East Cleveland.

R. P. Hains, Middleburg, Penn.; two-story garage, 40x38; one-story garage, 40x60, $3500.

V. A. Sumare, Scranton, Penn.; one-story garage, 60x150, $20,000.

J. B. Pierce, Schenectady, N. Y.; one-story garage, 24x50, $3000.

Mrs. F. H. Fay, 63 South street, Auburn, N. Y.; one-story garage, 51x27.

Anton Pirner, 2069 Westchester avenue, New York City; one-story garage, 50x80, $12,000.

Taylor Ice Cream Company, Buffalo, N. Y.; two-story garage, 52x70, $10,000.

Robert Gentes, 221 Fayette street, Peoria, Ill.; one-story garage, 50x100.

H. A. Hansen, 6459 South Paulina street, Chicago, Ill.; two-story garage, 23x52, $6000.

Joseph Fakan, 1826 South May street, Chicago, Ill.; two-story garage, 50x125, $8000.

L. Novy & Son, 3223 West 22nd street, Chicago, Ill.; one-story garage, 50x125, $8000.

H. S. Goumans, Winona, Minn.; two-story garage, $4000.

John N. Dyer, 107 South Third street, Vincennes, Ind.; two-story garage, 100x100.

S. E. Conley, Sharon, Wis.; one-story garage, 60x66.

Mrs. George R. Balch, Cincinnati, O.; four-story garage and sales room, 60x90, $30,000.

Peter J. Tolomnas, Salem, Mass.; one-story garage, 88x85.

George Pennhorn, 124 Boylston street, Boston, Mass.; one-story garage, 25x37; to be erected at Jamaica Plain.

Louis Horowitz, 740 Howard street, Brooklyn, N. Y.; one-story garage, 30x30.

H. A. Miller, 409 Pittsburg building, St. Paul, Minn.; two-story garage, 60x144, $20,000.

H. Gnelch, New London, Wis.; one-story garage, 30x120, $5000.

F. Trobbic, Erie, Mich.; one-story garage, 40x50, $2500.

K. D. Norris, Calumet building, East Chicago, Ill.; one-story garage, 50x40.

White Motor Sales Company, Akron, O.; one-story garage, 66x229.

Frank Griswold, Geneva, O.; one-story garage, 50x90.

E. J. Andrews, Cleveland, O.; two-story garage, 39x38; one-story garage, 20x22.

Paul Kleefeld, Dry Cleaning Company, 3067 West 25th street, Cleveland, O.; one-story garage, 16x32.

William E. Doran, Bristol, N. J.; two-story garage, 33x83, $10,000.

Dennis Norton, 339 Douglas street, Brooklyn, N. Y.; one-story garage, 40x75, $7000.

A. E. Debnnn, 41 Liberty street, New York City; one-story garage, 99x150, $12,000, to be erected at Brooklyn, N. Y.

CONTRACTS AWARDED.

C. E. Loyd, Philadelphia, Penn.; one-story stone and frame garage, 20x22, for G. V. B. Leitch, Oak Lane, Penn.

Charles Rosser, 1319 Wood street, Philadelphia, Penn.; one-story brick and stone garage, 16x60, $1200; for Mrs. P. McNichol, 1318 Parrish street.

Lewis W. Zell, Philadelphia, Penn.; one-story addition to garage, 48x88, $3000, for W. H. Windolph.

Spanheimer Brothers, 1116 27th street, Milwaukee, Wis.; one-story garage, 20x20, for John Stuesser, 843 40th street.

Oscar Warth, Jr., 649 95th street, Milwaukee, Wis.; one-story garage, 20x22.

E. J. Cross, 82 Foster street, Worcester, Mass.; one-story garage, 24x20, for Waldo Lincoln, 49 Elm street.

H. Koenig, 883 97th street, Milwaukee, Wis.; one-story addition to garage, 17x20, for Ney & Schanke, 2513 Vliet street.

L. Klass, 6213 Racine avenue, Chicago, Ill.; one-story garage, $6000.

F. W. Dunn, 111 East North street, Akron, O.; one-story garage, 45x120, $8000, for W. R. Talbot, 24 Oakdale street.

C. A. Ross, Little Falls, N. Y.; two-story garage, 56x100, $100,000.

GARAGES AND REPAIR SHOPS.

C. C. Wauglop, Centerville, Ia., is erecting an up-to-date garage.

Peter Holt, Boscobel, Wis., is building a two-story garage, 50 by 90 feet. The second floor will be devoted to repair work and dead storage.

B. A. Rice, Cambridge, Mass., is erecting a modern garage at 74 Fairweather street.

The Northern Boulevard Company, Albany, N. Y., has erected a modern fireproof building. The company is agent for the Marmon car.

Frederick C. Bowditch, Boston, Mass., is erecting a modern garage at 205 Pleasant street.

McCandless & Boyd, Louisville, Ky., will erect a one-story garage on Oak street, to cost $4000.

Thomas F. Murphy, Southbridge, Mass., will erect a modern two-story garage, 100 by 50 feet, at a cost of $10,000.

Belford Crossaboom, Millville, N. J., is having a modern garage erected.

Walter Tyrell, Springfield, O., is erecting a modern garage on North Fountain avenue.

Frank B. Knoblauch, Minneapolis, Minn., is erecting a first-class electric garage at a cost of $16,000. It is located at 1717 James avenue.

W. E. Anderson, Arlington, Ia., will erect a modern garage near the St. Cloud hotel.

Deicher & Arndt, Plymouth, Wis., is building a first-class garage on Mill street.

The Allen T. Spang Auto Company, Livingston, Wis., will erect a two-story fireproof garage.

Theodore Decot, Sauk City, Wis., is erecting an up-to-date garage at the corner of Jackson and Washington streets.

The Skellet Company, Minneapolis, Minn., has erected a modern garage at 714 Fourth street.

Thomas Barbuzza, Fort Worth, Tex., is erecting a modern two-story garage on First street, at a cost of approximately $10,000.

Henry Kaiser, Adams, Mass., has purchased property on Crandall street and will erect a modern garage.

Edward Granlund, Quincy, Mass., will erect a first-class garage on Glandale road.

Briggs & Son, Memphis, Mo., is planning to rebuild its garage and implement house.

E. H. Christian, Reading, Penn., is building a first-class garage on Grant street.

A. H. Batchelder, Dunedina, Fla., will erect a garage.

Wesley Kalb, Bucyrus, O., is building a two-story garage on South Sandusky street.

The Bagg Street Auto Garage Company, Detroit, Mich., is erecting an up-to-date garage on Bagg street, west of Woodward avenue. The building will be 25 by 167 feet.

William T. Wallace, Philadelphia, Penn., will erect a one-story garage, 100 by 125 feet. It will be of brick construction. Mr. Wallace is located at 1327 South 57th street.

The Gripp Company, Afton, Ia., is preparing to erect an automobile sales room and garage.

Thomas Crockett, Unionville, Conn., is building a first-class garage.

W. Domroe, Brooklyn, N. Y., is to build a brick garage on Dumont avenue at a cost of $4000. It will be one story and modern throughout.

Digitized by Google

WITH THE MANUFACTURERS.

The Lansing Foundry Company, Lansing, Mich., for the past 12 months has increased its production 600 per cent., which has made it necessary to add to the working force. The company now employs about 100 men, and its officers are: President, J. H. Moore; vice president, Ray Potter; secretary, C. D. McCormick; treasurer and factory manager, M. C. Knight.

The Homer Motors Company, Los Angeles, Cal., with offices at 1119 Van Nuys building, is manufacturing the Homer high-grade motor tractor, weighing four tons, which sells fully equipped at $3000. The company also manufactures the Homer light delivery automobile, which has a capacity of 1000 pounds and sells for $600. J. F. Meyer is president, Dr. J. E. Cowles vice president, G. W. Bishop secretary and F. Thompson treasurer.

The Haynes Automobile Company, Kokomo, Ind., is working full time with full forces of men.

The American-La France Fire Engine Company, Inc., New York City, reports for the year ending Dec. 31, 1914, net profits of $350,645, and a surplus, after seven per cent. dividends on the preferred stock, of $210,645. A dividend of one per cent. on the common stock has been declared by the directors, payable Feb. 15 to stock of record Feb. 1.

A. R. Mosler & Co., New York City, has purchased the large plant occupied formerly by the Hodgman Rubber Works of that city. This addition measures 273 feet long and is four stories high. The screw machine department will be set in the basement, while the next floor will be the stock room, tool room, shipping and receiving department. The next floor will be the offices and assembly departments.

Views of the Allen Motor Company Which Recently Absorbed the Somers Motor Company of Bucyrus, O.

The Motorkart Company, Scranton, Penn., is contemplating the erection of an addition to its factory, 60 by 300 feet, the estimated cost being $50,000.

The Chandler Motor Car Company, Cleveland, O., will soon begin the construction of an addition to its present plant, which will be of brick, steel and concrete.

The Allis-Chalmers Manufacturing Company, Milwaukee, Wis., is erecting a large addition at its main works in West Allis, to accommodate the transformer department, which was recently moved from the Bullock Works in Norwood, Cincinnati, O.

The Grant Motor Company, Findlay, O., has leased the buildings formerly occupied by the Findlay Table Company. The addition will give the company about 40,000 square feet and it will be used for finishing automobiles. It will also be the shipping point of the product of the factory. It is expected that the company will turn out 50 of its new sixes a day.

R. C. Neighbors, Detroit, Mich., formerly sales manager of the Hupp Motor Car Company, will manufacture electrical specialties used in the automobile industry. His address is 100 Beaubien street.

The Allen Motor Company, Fostoria, O., has recently absorbed the Somers Motor Company of Bucyrus, O., the latter company being formed to manufacture a motor which was invented by L. A. Somers.

The Maxwell Motor Company, Inc., Detroit, Mich., is able to supply any part for the Maxwell-Briscoe, Stoddard-Dayton, Brush, Everitt, Columbia and Courier pleasure cars and the Alden Sampson commercial vehicle. The service is such that all orders are filled and shipped to their destination within 24 hours after their receipt. The company maintains a three-story factory at Newcastle, Ind., and a service branch is maintained at San Francisco, for western patrons. Approximately 34,950 different parts are carried in stock, which represents $2,000,000. In addition, $250,000 worth of stock is carried at the western branch.

The Cooper Manufacturing Company, Worcester, Mass., has just been formed and will put on the market a new device called the Lightning trouble finder and jump spark tester, invented by J. C. Cooper.

The Wagner Resilient Wheel and Tire Company, Chelsea, Mich., which was organized in Chicago some time ago under the laws of the State of Michigan, with a capital stock of $500,000, has purchased the plant formerly occupied by the National Peat Fuel Company at Chelsea, and will start manufacturing within a short time. The officers of the company are: President, William F. Wagner; vice president, T. E. Russell; secretary-treasurer, A. C. Baird.

The Homer Laughlin Engineers Corporation, Los Angeles, Cal., with factory and offices at 2652 Long Beach avenue, have purchased the Pacific Mechanical Company, formerly located at 5410 South Normandie avenue.

The Goodyear Tire and Rubber Company, Akron, O., has taken over the sale of Motz cushion tires, and there has been some speculation as to the future activities of salesmen widely known in the trade under the former Motz organization. J. V. Harding has his headquarters at Detroit, H. E. Harding, E. F. Thompson and F. B. Hesse are located in Akron, and W. F. Meyer, H. O. Brinker and V. E. Wagstaff are in Chicago.

The Simmons Manufacturing Company, Kenosha, Wis., has broken ground for three additions to its factory at a cost of $100,000. The new buildings will be ready for occupancy some time during August. The company manufactures spring sets for automobile cushions and upholstery.

The Universal Manufacturing Company, Racine, Wis., maker of compressed air cranking devices for automobiles, has been obliged to increase its working force to take care of increased orders for the appliance. A special device is made for Ford cars and the demand of these goods has necessitated this step.

The Kelly-Springfield Motor Truck Company, Springfield, O., has received an order for 150 trucks from the Canadian government. J. L. Geddes, president of the company, states that the trucks are of the 3½-ton type. He also says that the order calls for 30 trucks a month until the war is ended.

The Fisk Rubber Company, Chicopee Falls, Mass., in its annual report for the year ending Oct. 31, 1914, shows net profits of $942,204, an increase of $336,204.

The B. F. Goodrich Company, Akron, O., in its annual report for the year 1914, shows net profits of approximately $5,440,000. The company's financial position has again been materially strengthened during the past year as to the amount of quick assets over the current liabilities, showing a gain over last year of approximately $2,950,000.

The Mitchell-Lewis Motor Company, Racine, Wis., uses the United States chain tread tire as the standard

Digitized by Google

and exclusive equipment on the rear wheels of the well known Mitchell car manufactured by that company.

The Briscoe Motor Company, Detroit, Mich., has leased for one year the old Cutting plant in Jackson, Mich., with the privilege of purchasing it. This plant will be used by the Briscoe Company as a painting and trimming shop, which will give employment to about 300 men.

The Sternberg Motor Truck Company, Milwaukee, Wis., is making final deliveries on an order for 150 Sternberg commercial trucks for the allied armies of Europe. Each truck has been thoroughly tested and has been given a 300-mile test with a rated capacity load.

The Grant Motor Company, Findlay, O., held its annual meeting recently and elected the following officers: President, David A. Shaw; vice presidents, George D. Grant and George S. Salzman; secretary and sales manager, George S. Waite. The board of directors consist of these officers and E. A. Dorsey, J. M. Howe, Roger R. Hall and Charles A. Grant.

The Badger Brass Manufacturing Company, Kenosha, Wis., at its annual meeting, elected Gordon Yule as a director to fill the vacancy caused by the death of his father, William Y. Yule. Other officers were re-elected as follows: President, George A. Yule; vice president, William H. Yule; secretary, L. J. Keck; treasurer, Richard H. Welles.

The Ingram-Hatch Motor Corporation, 2 Stone street, New York City, is planning to build a plant at Calgary, Alta., for the manufacture of automobiles and motor trucks.

The Chester County Motor Company, Coatesville, Penn., is planning to construct a factory for the manufacture of commercial cars. J. Edwin Brinton is president.

The Ohio Carriage Manufacturing Company, Columbus, O., which purchased the old plant of the Barndt-Johnson Body and Top Company on South High street, has installed complete machinery for the manufacture of automobile bodies. The company will make bodies for all makes of cars, but will specialize on bodies for Ford cars.

The Briggs-Detroiter Company, Detroit, announces that it will market a low-priced eight-cylinder car on a large scale. The new car will sell for $1295. Following closely the distinctive lines of the 1915 Detroiter four, the new eight is more elaborate and embodies many advanced ideas. It is finished in a beautiful Kimball green with gold stripes and has Turkish type upholstering in leather.

The Dort Motor Car Company, Flint, Mich., completed its organization recently. The company is capitalized for $500,000, for the purpose of manufacturing automobiles. The stock is $100,000 preferred and $400,000 common, with $217,000 paid in. The working capital will be increased to approximately $250,000. The directors are all members of the present Durant-Dort Carriage Company's organization.

The Mutual Motors Company, Indianapolis, Ind., organized recently with $1,000,000 capital, will manufacture automobiles in Jackson, Mich., for Marion Motor Company of the former city, and also for the Imperial Automobile Company of Jackson.

Dusenberg Bros., St. Paul, Minn., has opened its new motor manufacturing plant.

The Stewart & Clark Manufacturing Company, Chicago, Ill., will erect a six-story addition to its already large plant, at a cost of approximately $75,000. The company manufactures a line of automobile supplies and is located at 1828 Diversey boulevard.

The Fair-Anderson Company, Chicago, Ill., contemplates the establishment of a branch factory for the manufacture of automobile tires at an estimated cost of $125,000.

The National Carbon Company, Cleveland, O., has declared its regular quarterly dividend of 1¾ per cent. on the preferred stock, which will be payable to stockholders of record Feb. 15.

The Montana Improved Spring Wheel Company, Livingston, Mont., is preparing plans for the construction of a plant to manufacture spring wheels for automobiles.

The Kelly Motor Truck Company, Springfield, O., will erect an addition of reinforced concrete, which will be 50 by 260 feet.

The Mecca Tire Company, Trenton, N. J., has purchased the building formerly occupied by the American Lamp and Brass Company. It is being remodelled and improved for the purpose of tire manufacturing. The property covers about three acres and contains six brick buildings, 30 by 90 feet each, five of them 2½ stories high and the other 3½ stories. These buildings will be equipped with the necessary modern machinery to turn out from 250 to 300 tires a day.

The Olds Motor Works, Lansing, Mich., is again issuing its house organ, known as the Official Bulletin of the Olds Motor Works, as a monthly periodical.

The Blood Bros.' Machine Company, Allegan, Mich., has moved from Kalamazoo and will continue to manufacture universal joints and the Cornelian light car at the former city.

The Motor Ignition and Devices Company, Detroit, recently organized, has opened offices in the Boyer building and will manufacture ignition apparatus for automobiles. John L. Milton is the general manager.

The Jones Motor Car Company, Wichita, Kan., has completed its plant at 210 West Douglas avenue. The company manufactures the Jones Six car.

The Pendelton Manufacturing Company, Culver City, Cal., has installed new machinery at its plant, where it manufactures a small light car.

The Fisk Tire and Rubber Company, Duluth, Minn., is planning to establish a factory branch and will locate in the Dodge block.

The Castle Rubber Company, New Castle, Penn., capitalized at $500,000, has been organized to manufacture a non-skid tire and tubing and later will add other articles to its product.

The Continental Motor Manufacturing Company, Muskegon, Mich., will erect a plant in that city. The new building will connect the annex with the main factory and will be used as a machine shop. The plant in Detroit is running at full capacity.

The Hudson Motor Car Company, Detroit, Mich., according to statements given out at the New York show, made a sales record of $7,500,000 in the five months between July 1 and Dec. 1, 1914. This aggregate of sales compares with $3,000,000 in the same period of a year ago and is an increase of 150 per cent.

The Champion Spark Plug Company, Toledo, O., held its annual salesmen's convention in Detroit, Mich., recently. The entire sales force visited the King factory and the Jeffery-DeWitt plant and later were guests of the Ford Motor Company.

The Hupp Motor Car Company, Detroit, Mich., is building additions to its factory to cost upwards of $150,000. A two-story office building, a top and body building, a testing laboratory and an engineering building are the new additions.

The Triple Action Spring Company, Chicago, Ill., manufacturer of the Johnson shock absorber, has been awarded the order for the entire equipment of the Walker Vehicle Company, maker of the Chicago electric car.

The Willys-Overland Company, Toledo, O., is distributing a catalogue de luxe showing its new Overland six model 82.

The Gearless Differential Company, Detroit, Mich., has elected the following officers for the coming year: President, George D. Bailey; vice president, C. F. Ferguson; secretary and treasurer, E. O. Knight. The directors are: George Stroh, A. MacLaren, H. H. Bailey and John Schrag.

The Federal Motor Truck Company, Detroit, Mich., has awarded its employees a bonus of 10 per cent. of their wages for the past year as a share in the profits of the company.

The Thermoid Rubber Company, Trenton, N. J., has issued a folder devoted to the Thermoid hydraulic compressed brake lining. A scale of prices is given for the various widths and thicknesses.

The Bergdoll Automobile Company, Philadelphia, Penn., will erect a large manufacturing plant at Trenton Junction, N. J.

The Magee Sheet Metal Machinery Company, Detroit, Mich., will manufacture sheet metal wiring machines especially used in wiring fenders. Several sample machines have been tried out by one of the largest automobile manufacturers, and it is said its use has resulted in the saving of more than $40 a day.

The Revivo Storage Battery Company, Louisville, Ky., was organized recently to manufacture a dry storage battery, designed to displace the acid battery of all classes, which it is said can be recharged indefinitely. R. M. Kelly, Jr., has been elected president of the company.

The Zenith Carburetor Company, Detroit, Mich., has been elected to membership in the Motor and Accessory Manufacturers.

The Duplex Power Car Company, Charlotte, Mich., which makes the Duplex four-wheel drive trucks, has received an order for 12 two-ton trucks from the United States government.

The Lyons-Atlas Company, Indianapolis, Ind., has increased its capital stock from $1,000,000 to $1,500,000. The company is preparing to market a new medium-priced car, experiments on which have been under way for several months.

The McGraw Tire and Rubber Company, East Palestine, O., is making extensive improvements to its plant on Taggart street. The increased business necessitates this step.

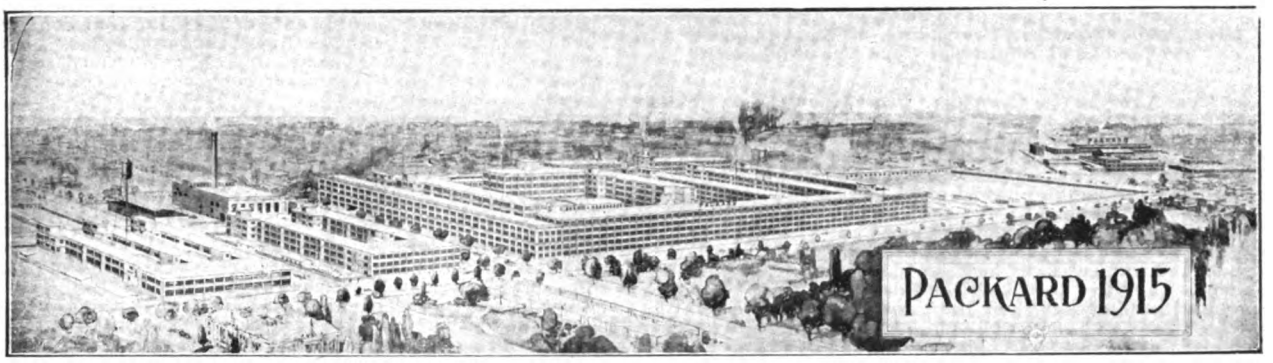
The Remy Electric Company, Anderson, Ind., has purchased a tract of land on East Grand boulevard, Detroit, Mich., which has a frontage of 500 feet. A new building will be erected which will have 20,000 feet of floor space and will be three stories high.

The Saxon Motor Car Company, Detroit, Mich., has secured a five-year lease on the Abbott Motor Car Company's factory on Beaufait avenue, and will occupy it as soon as alterations are made.

The Moon Motor Car Company, St. Louis, reports a gain of 28.24 per cent. during the month of January just passed with the corresponding month last year. The shipments of 1915 models during the first month of this year were valued at $347,912.07.

The Rolls-Royce Company, Ltd., of Great Britain, decreased in business for the year 1914 compared with the previous year. A dividend of 10 per cent. was recommended instead of the 20 per cent. in 1913.

Digitized by Google



Bird's-Eye View of the Packard Motor Car Company Plant, Detroit, Mich., as It Looks Today.

Company, General Motors Truck Company, General Motors Export Company, General Motors (Europe), Ltd., and General Motors Company of Michigan. The total preferred stock of the above companies is $646,000, of which the General Motors acquired $596,000, and of the $15,926,003 common stock, the holding company owns $15,398,003. As a dividend payer the General Motors has an excellent record, maintaining a steady rate of seven per cent. on its own $18,038,400 outstanding preferred stock. A stock dividend of 150 per cent. was paid on the common stock November, 1909.

Overland to Turn Out 75,000 Cars.

For 1915 the Willys-Overland Company, Toledo, O., will have an output of 75,000 automobiles, making the greatest showing in the history of the firm. With a capitalization of $30,000,000, a total of 8600 men employed, 92 acres of ground for factories, and an actual floor space of 79 acres, the Willys-Overland occupies an enviable position in the automobile world. The company's growth is well illustrated in the following tabulation, which gives its production output from the first year to date:

Year	Output	Year	Output
1908	400	1912	22,500
1909	4,000	1913	40,000
1910	12,500	1914	50,000
1911	16,000	1915	75,000

The Willys-Overland is a striking example of the manner in which the modern automobile company is being financed. The fundamental principles behind this concern's financing are of an exceptionally strong character. The $5,000,000 outstanding seven per cent. cumulative preferred stock is preferred as to both assets and profits, and is redeemable as a whole or in part at the option of the company at 110 and accrued dividends on 60 days' notice. A cumulative sinking fund for the purchase or redemption of the preferred stock at not exceeding 110 and accrued dividends has been created, and on July 31, 1914, $250,000 was set aside for this purpose. On the same date this year another $250,000 will be retired, and beginning July 31, 1916, the annual sinking fund will be an amount equal to 10 per cent., of the net earnings for the preceding fiscal year, which must not be less than $250,000. Through the ownership of the entire $1,500,000 stock, the Willys-Overland Company controlled the Garford Company, but late reports state that this concern's holdings have been disposed of.

An excellent indication of the coming period of prosperity due to bumper crops is well illustrated by the action of the Studebaker Corporation, Detroit, Mich., in rushing a train load of Studebakers to its Kansas City branch for distribution throughout Kansas and Oklahoma. This is the first time in the history of the Studebaker corporation that a train load of cars has been shipped to the Middle West during the production season, but demands of farmers throughout that section made such action necessary. During the past year this concern manufactured 17,600 fours and 7000 sixes, and $160,000 expended during the year for plant additions will enable the corporation to turn out 35,000 cars for the present year.

The earning statement of the past year will not be made public until the Studebaker corporation holds its annual meeting, April 6, but it is known that the company year was the most successful since its inception. The current year will be a banner period and the record of 1914 will be far surpassed. Studebaker is paying full dividends on its outstanding $12,180,000 seven per cent. preferred, and a special surplus account of not less than three per cent. of the preferred outstanding is set aside each year for redemption of the preferred, and that fund must amount to $1,000,000 before any dividends are paid on the common, and not more than six per cent. to be paid on common until this fund totals $2,500,000.

SHOW FOR SPRINGFIELD.

Massachusetts City to Hold Display in Auditorium in March—To End When Boston Show Starts.

Ending on the night that the Boston automobile show starts, Springfield, Mass., will hold an automobile show this year in the Auditorium, March 4-6, inclusive. J. Henry Graham, who has managed similar shows in Manchester, N. H., Bangor, Me., and Lewiston, Me., promises to have something worth while.

AUTOMOBILE MEN ORGANIZE.

Portsmouth, N. H., Dealers and Proprietors of Garages Form a Business Men's Association.

A business men's association, composed of automobile dealers and proprietors of garages, was organized recently at the Sinclair Inn, Portsmouth, N. H. The organization will comprise members from Portsmouth, Dover, Rochester, Exeter, Somersworth and Newmarket. The officers elected were: J. W. Edwards, president; Clifford Loud, secretary and treasurer. A committee of three, Charles E. Woods, Albert Wetherell and George C. Welsh, was appointed to establish by-laws for the association. A banquet followed the meeting and plates were set for 25.

At the Top Is a General View of the Ford Plant as It Stands Today and Below May Be Seen a Part of the Ford Army of Employees.

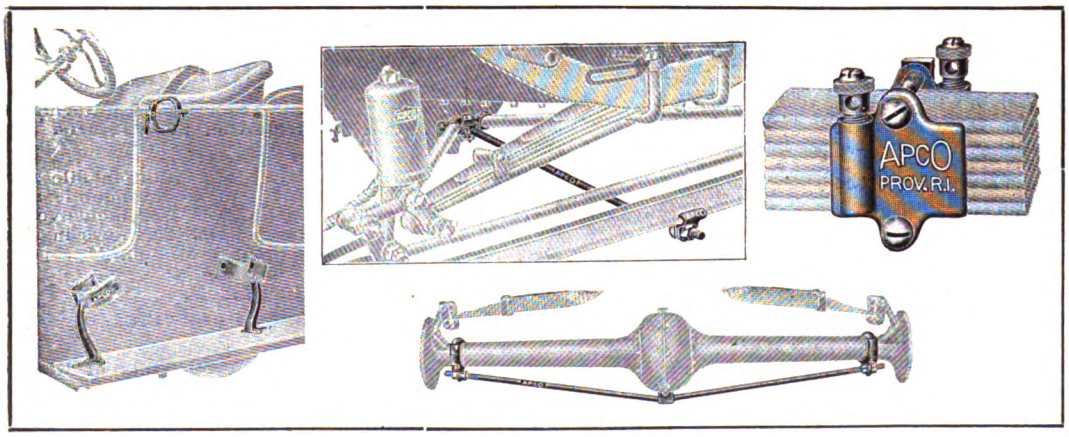
FOUR NEW APCO SPECIALTIES.

Auto Parts Company, Providence, R. I., Announces the Production of Additional Ford Car Equipment.

The Auto Parts Company, Providence, R. I., manufacturer of Apco specialties for Ford cars, is producing several new Apco devices which will recommend themselves to owners and the trade because of their practical qualities and reasonable price. Four of these are shown in the accompanying illustration. The tire holders are designed to be placed on the running board, a location that has advantages for carrying extra tires over the rear of the body, where the shoes may be splashed with mud and subjected to heat of exhaust gases, which destroys the life of rubber. A desirable quality of the Apco tire holders is their light weight, the maker stating that they weigh seven pounds less than the lightest rear holder in the market. The Apco design is very strong and compact. No straps are necessary. The holders were designed to accurately fit the Ford size of tires. They retail for $2 the set.

The Apco spring leaf lubricator consists of a pair of plates having an oil reservoir and felt inserts. These inserts rest against the side of the springs and feed the oil between the leaves by capillary action. They keep the frictional surfaces constantly lubricated and improve the riding qualities of the car. These lubricators are sold four to a set for $2, and can be attached by the owner in a few minutes.

Another Apco specialty is the rear axle truss that is designed for Ford cars made previously to 1915. A feature of the truss is that it does not impose any strain on the axle tubes, as the clamps securing the truss are attached to the reinforced ends of the axle housings. The truss has a cradle which fits under the differential case, and the cradle has square sockets to take the square heads that are made integral with the rods. In the clamps is a square recess, so that the bolts are flush with the surface. This truss is adjustable and can be attached in 10 minutes. The cost is $1.50.



From Left to Right Are Shown the Apco Side Tire Holders, Apco Front Axle Brace and Apco Spring Leaf Lubricators; the Lower Illustration Is of the Apco Rear Axle Truss.

The front axle brace, the last of the four specialties shown in the illustrations, is the latest Apco production. The front radius rod has more or less give, and claim is made that the spring of the tubing causes the front axle to tip backward, affecting the steering of the machine. The Auto Parts Company's front axle brace consists of two ingenious clamps and a steel rod. One of these clamps is attached to the V-end of the radius rod by three bolts which have square heads fitting into a recess, which prevents their turning. The end of the rod has a square head. The other clamp is secured to the front axle, as shown in the accompanying illustration, and is held firmly in place by two nuts on the rod, which extends through the clamp. This rod can be attached with a wrench in five minutes. It weighs but three pounds and sells for $1.50.

NATIONAL UNITED SERVICE COMPANY.

Organization Formed to Establish "Nusco" Service Stations Along the Lincoln Highway.

That the motorists who traverse the United States via the Lincoln highway will not want for all the comforts of home, is plainly shown by the recent move to establish service stations along the entire length of this highway and its main arteries which ultimately lead to and include every mile of travelable roadway in the United States. This will be done by the National United Service Company, Ford building, Detroit, Mich., and the stations will be known as Nusco service stations, the initials of the company being used to coin the word.

This concern anounces that it has been under way for the past two years, and that all details were settled before making a public announcement of its plans. It has taken on the entire output of 46 different concerns who manufacture various lines of automobiles, accessories and motor car parts, and is now ready to announce a complete Nusco assortment ranging from spark plugs to motor trucks.

COURSES OFFERED BY EXTENSION DIVISION.

Classes Being Formed in All the Chief Cities of the State —Instructions Given in Series of 10 Lectures.

The Extension division of the University of Wisconsin has prepared and is offering to Wisconsin motorists a very interesting and effective course of lectures on the gasoline automobile. This course is the result of a widespread demand from owners and drivers for a better knowledge of the mechanical principles of their machines. The value of this opportunity for mechanical education can be appreciated when one considers the complexity of the present-day motor car and the fact that over nine-tenths of the automobiles in use are operated by men with little or no experience in the handling of machinery. The university hopes with this course of lectures to reach every important city in the state. Six experienced mechanical engineers of the staff of the Extension division are available to conduct the course in different parts of Wisconsin.

This work was planned by Professor Earle B. Norris, who is in charge of the mechanical engineering work of the Extension division. Professor Norris has had several years' experience in the automobile industry and was at one time experimental engineer with the Reo Motor Car Company. In developing the plans for this course, he was assisted by two other members of the engineering staff of the Extension division, George W. Hobbs, formerly with the Buick Motor Company and the Weston-Mott Axle Company, and B. G. Elliott, formerly with the McKeen Motor Company.

The instruction is given in a series of 10 lectures, with lantern slides, models and other demonstrations necessary to make clear the principles of motor car construction and operation. To supplement the lectures, printed pamphlets will be given out so that the students will have this material in convenient form for reference. Besides the university men already mentioned, these pamphlets represent the work of some of the best known writers in the automobile field. The writings of Victor W. Page, Clifford P. Shattuck and William W. Scott have been selected especially because of the ability of these men to explain technical matters in a way that will be clear and interesting to the non-technical reader. The well known Motor Trouble Chart, prepared by Mr. Page, is also supplied to each student and its application to the diagnosing and curing of motor difficulties is explained.

Classes are already under way in several cities and one is now being organized in Milwaukee.

KRIT MOTOR CAR COMPANY.

Company Has Been Reorganized and Will Give Service to Krit Dealers and Owners as Heretofore.

Announcement is made that the Krit Motor Car Company, Detroit, will be continued, the old company having been sold and a complete reorganization effected. The business will be carried on the same as formerly and will remain in the same factory. The name, however, has not been changed.

The service department will be carried on and all Krit dealers and Krit owners of pleasure cars will be taken care of in every respect, the same as before the period of reorganization.

The terms of cash in advance, which has governed all shipments for some time past, is no longer in vogue. In future all shipments will be made on a C. O. D. basis and it is not necessary to send remittance with order.

Guaranteed forever against center breakage

Tuthill Titanic Unbreakable Spring

Guaranteed forever against center breakage

Why not sell a guaranteed breakless spring

When a car owner breaks a spring—he does not want the same make—he insists on a better spring—sell him the Tuthill Titanic.

The Titanic is guaranteed forever against center breakage—and can be mounted on the axle without any extra machinery or fitting.

No center bolt means that the Titanic is strongest where the ordinary springs are weakest—in the center where 75 out of every 100 of the other kind break.

No matter what make or model—there is a Tuthill Titanic for every car.

Write us today for list of our "50 Best Sellers"—and we will tell you how to make more money on a smaller investment.

Also ask us about our Quick Service Supply Department Plan.

Hundreds of other dealers are making money on the Tuthill Titanic—why not you?

No other spring is so easy riding

TUTHILL SPRING COMPANY

776 Polk Street **CHICAGO, U. S. A.**

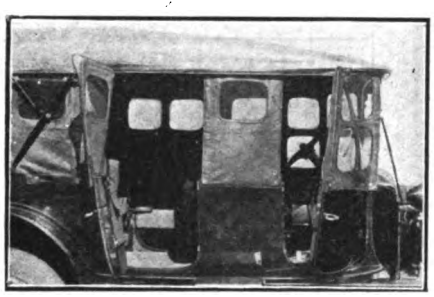
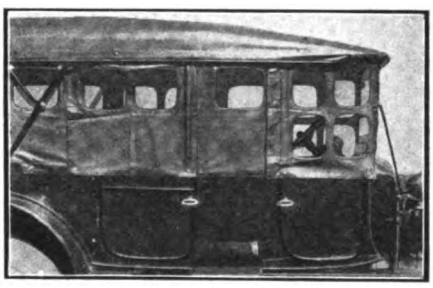
Overcomes Nuisance Remaining in Quick Acting Curtains.



As Used on 1915 Packard Models.



Closes as Tight as Old Way.

THE GREATEST CURTAIN CONVENIENCE

IS THAT THEY

OPEN INSTANTLY WITH THE DOOR AND CLOSE TIGHT WITHOUT BUTTONS

The newest and final improvement in top curtains, obtainable only by the use of the

BLACKMORE CURTAIN OPENER

(Patented June 5, 1907.)

A simple bracket that supports the curtain at the door edge and swings door part of curtain open or tightly closed as door is used, doing away with the annoyance of unbuttoning curtains.

AN IMPORTANT PERSONAL SAFETY FEATURE.

as you will not be locked in your car by the curtain fasteners.
This method of curtain design gives the weather protection and convenience of a **limousine** or **convertible body** to the owner of an open car without the expense, weight or rattle of the special body.

Any top maker can convert your present curtains so they will fit tight around the edges and **open in this convenient way.**

The bracket is easily detachable (without tools) from an inconspicuous plate fastened to the door. You take it off when you take off the curtains.
A moment's thought will convince you that this new feature offers a greater convenience during the many months of bad weather than is offered by the quick acting curtains which you might have occasion to put in place quickly but a few times during the year, when caught by a sudden storm.

This final improvement in curtains has been adopted because of its many unusual features hitherto unobtainable, at an increase in cost, on the 1915 models of the Packard, White, Cadillac, Chalmers and Hupmobile, and is being rapidly tested by other progressive manufacturers.

Insist that your new models be equipped in this manner. You will be surprised how it will help you sell cars during the bad weather months, as your demonstrating cars can be used to secure business comfortably and conveniently during the winter months.

Order some for your used cars and see that they are made attractive to a buyer during bad weather.

They fit any car and every kind of curtains.

ONLY $1.50 PER DOOR

Liberal discount to dealers or top makers brings price so low it does not pay you to try to infringe our patents, which have been proven to be basic ones in the exhaustive search made by the patent counsel of the companies which have adopted this device and who are paying us royalties for same.

If your car is equipped with Collins or Jiffy curtains it can be greatly improved for every day use with these Curtain Openers.

THE DAYTON TOP IMPROVEMENT COMPANY

DEALERS! THERE ARE BARRELS OF MONEY FOR YOU IN SELLING THE NEW

"SUPERIOR"

Stream-Line FORD HOOD

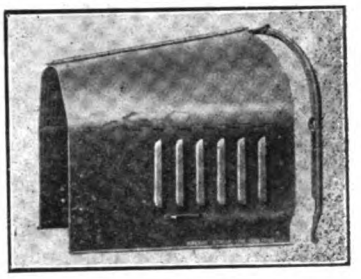
"Makes the Ford a car of beauty"

PRICE TYPE "A" $11.40 EACH

WITH HOOD REST—Black enamel finished ready to attach.

PRICE TYPE "B" $7.50 EACH

Patents Applied For.



This is a Ford Specialty which any dealer can sell in great quantities for it so transforms the Ford that it looks like a $2000 car. Any Ford owner will be glad to change his homely hood for this Stream-Line bonnet whose tapered up-to-date lines add so much distinction to the appearance of his car, at such Little Cost.

The "Superior" Stream-Line Hood is made of heavy 16 gauge pressed steel, has 6 ventilator gills on each side, is built solidly and substantially and will not rattle or creak. There are no exposed hinges on top, preventing rain or water from getting on the motor or wiring—is finished in hard baked black enamel and comes ready to attach and is easy to apply A special hood rest is included. **Don't waste any time, but get busy now and commence to coin the profits this specialty will make for you,**

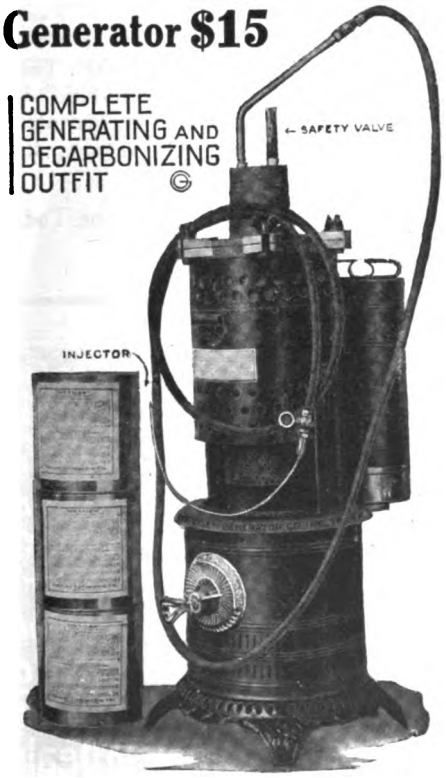
An Oxygen Carbon Remover and Generator $15



A generator not too large for a small garage or shop, but with capacity great enough for the largest.

Sold with complete equipment, extremely economical to operate and guaranteed in every particular.

No tanks to bother with, no delay in securing material. A practical equipment that can be operated by any one.

Carbon can be removed from any cylinder in three minutes.

Oxygen can be generated in three minutes.

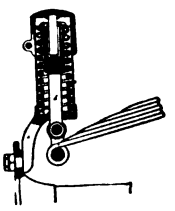
It is a time, money and labor saver.

$9 A SET OF 4 FORD "O-G" SHOCK ABSORBERS $9

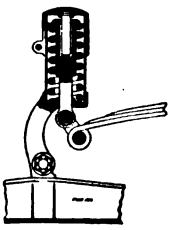
For Ford Delivery, Touring Cars and Runabouts

Adjustable when placed on the car, and automatically adjusted in service. Can be attached in fifteen minutes.

Sold with a guarantee that covers workmanship, material, finish and satisfactory service during the use of car.



The above illustration shows method of attaching to rear of Ford car Bearings of fine material, lubricated grease cups, there can be no rattle or squeaks.



This illustration makes clear the method of attaching the front "O-G" and shows the large amount of spring action possible. By twisting the cap, the spring in the absorber is tightened or loosened, giving the necessary increase in spring tension.

Immediate refund if the "O-G" Shock Absorbers do not prove to be entirely satisfactory.

Our Jobbers and Dealers discount sheets and special circulars at request. Write today.

HIGHLAND COMMERCIAL BODIES · FOR FORD CARS ·

Model FX Parcel Post Body
Load Space 43 x 45 x 50

GOVERNMENT SERVICE

Specially designed for the use of Rural Delivery Carriers, for the collection and delivery of mail and parcel post, quickly interchangeable with any Ford Roadster turtle back or rumble seat equipment, the Model FX Highland Body is intended to afford the owner all the service of the pleasure car and the business wagon with a single chassis.

This body gives full load capacity for bulky packages, complete protection against storm or theft, and insures rapid handling.

This body can be installed by slightly banding the fender brackets. No change is necessary in the fenders.

The FX Highland Body is equally adapted for any delivery service. It can be used on a series of chassis. The cost of a Ford Roadster and this body is no more than that of a good horse, buggy, delivery wagon and harness.

Equipment furnished with the body consists of a rear lamp bracket, irons for making it quickly interchangeable with the turtle back, and top curtains so that the regular storm curtains of the roadster body may be used.

HIGHLAND BODIES

Are designed and built for every service for which a Ford machine can be used, for converting either touring car or roadster. All types can be delivered immediately from stock. Material, workmanship and finish absolutely guaranteed.

DEALERS

Without investment of capital you can do a lucrative business selling Highland Bodies.

"The Best Accessory Ever Put Out For a Ford Car"

writes the superintendent of the American Auto Sales Company of New Castle, Pa., referring to the L-A Steady Steerer. Not a "gimcrack"; not an attempt to "doll up" the Ford and make it look like a freak car; but something no Ford driver would be without after it is once installed, because it becomes an absolute necessity to his comfort, safety and peace of mind.

Make Your Ford Walk a Chalk Line

L-A Steady Steerer
FOR FORD CARS

eliminates body sidesway and prevents the consequent turning of the front road wheels, unpremeditated by the driver, when rounding corners, turning out to pass vehicles and when driving over rough roads. It makes a Ford steer and hold the road like a Packard.

Type R fits any standard Ford car, $2.00

Type S for use with Ford cars equipped with shock absorbers, $2.50

Attached—50 cents extra

Sent prepaid from factory on receipt of price, with directions for installing, if your dealer is not supplied.

Dealers: Write quick for prices and terms. Every Ford owner is a sure buyer.

BRUNNER AIR COMPRESSORS

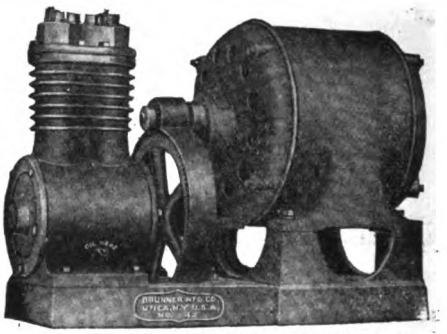
ARE AS NECESSARY AS A LATHE OR A DRILL IN THE REPAIR SHOP

BRUNNER COMPRESSORS are the most economical equipment that can be bought. The initial investment is comparatively small, the earning capacity is such that it will pay for itself in a short time in direct economies, and it will endure longer than any other machine in the shop.

The ACTUAL REPAIR EXPENSE, shown by figures from every Brunner Compressor in operation, for more than six and a half years averages

Less Than Two Cents a Year for Each Machine in All Services.

BRUNNER COMPRESSORS are practical and are built for every purpose. Either portable or stationary, vertical or horizontal, of varying capacities, for any form of power and hand or automatic regulating.



No. 4½, Double-Cylinder, Vertical.

Every machine is standard, is constructed of high class materials, and is BRUNNER QUALITY throughout. Efficiency, Durability and Economy are the characteristics of BRUNNER Compressors of any type. No compressor is as well built, and none will equal BRUNNER machines. Measuring BRUNNER quality by price they are the cheapest the market affords.

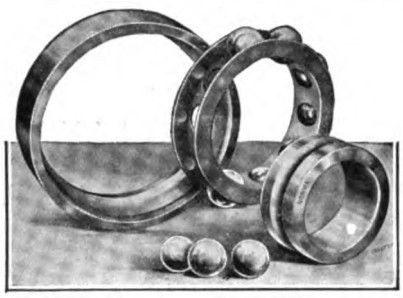
"NORMA"

Ball Bearings



Get this—more than 75 per cent of the high-speed, ball bearing electrical automobile accessories made in America today carry "NORMA" Bearings as standard construction.

These builders proved the merit of "NORMA" Bearings, before adopting them. Your safest course is to be guided by the judgment of these experienced builders—substitutions are dangerous.

THE NORMA COMPANY OF AMERICA

1790 Broadway NEW YORK

"NORMA" Ball, Roller, Thrust and Combination Bearings

Stop the Blinding Headlight Glare!

The law says it must be done—blinding glare is a menace to public safety. Screens simply interpose an obstacle between the light and the street—the user pays for the full power of his headlights and gets half power. The logical solution of the problem is the

Chaney Automobile Headlight Dimmer

It enables the driver to graduate the intensity of the light. It can be changed from high to low as you would turn down an oil lamp. Operated by moving the dimmer handle, it gives complete control of the headlights from the seat. In city driving the light is kept low with small current consumption—in the country where full power is needed a touch of the handle brings back the full searchlight efficiency.

This device is practical, dependable and efficient, costs little to buy and is readily installed on any car. The average car owner can place it on his car.

Dealers: At $3.50 the Chaney Dimmer is the best value in the accessory field and a fast seller. Our liberal trade terms make your margin of profit generous. You can clean up in your territory, for the dimmer is a legal necessity, and the Chaney is the best of all dimmers, and the only one sold under a ten year guarantee.

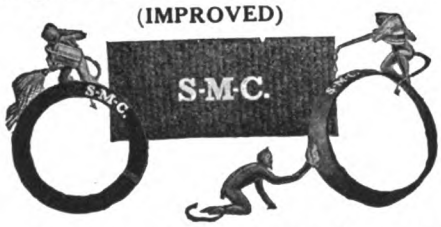
"Don't Gamble With Safety!"

The Real Test of Brake Lining Is SERVICE

Every dealer and public garage owner can make a service test of S-M-C brake lining that must prove its qualities and merits as the best lining that can be produced.

The dealer is the judge,—if the lining is not satisfactory, we refund the purchase price and, in addition, 10% interest.

(IMPROVED)



S-M-C brake lining is sold with the manufacturer's guarantee that it will give satisfaction to every purchaser—that it will give results equal to those obtained by the dealers and garage owners from their own service tests.

The customer decides the measure of satisfaction. If not in every way satisfied the purchase price is refunded.

S-M-C BRAKE LINING

Is composed of asbestos fabric woven with brass wire, treated with a compound and consolidated by steel rolls. It is heat, oil and water resisting and will endure in all conditions of service. It is absolutely uniform in quality. It is produced in all standard widths and thicknesses.

A SPECIAL LINING FOR FORD CARS

The S-M-C dealers' proposition is the soundest and broadest ever offered to the trade.

The S-M-C trade service specializes quick delivery.

Make Small Sales Pull Big Customers

Thousands of Dealers Employ This Winning Method

Don't wait for business to "drop in." Go after it now—with all your energy. Don't rely on big tire sales alone for profit. Make the small end of your business the big end. Stimulate your accessory sales. Cultivate new customers. Please them. Show them how to reduce their tire troubles. There is no quicker or surer way to win their patronage.

A two-minute explanation of the use of a Goodyear "tire saver" will give you a sale. But better yet—you have won a customer.

Show him how easily and how quickly he can patch a tire with Goodyear Quick Repair Gum. Tell him about the Goodyear friction repair tape—first aid for injured tires. Make him feel that it is not tire sales you are after—but tire service.

GOOD YEAR
AKRON, OHIO
Accessories

Help him out on his little tire troubles and he will buy your tires when he has "big" tire troubles.

The Way to Greater Sales

Thousands of dealers now make big profits from their accessory sales. The fullest confidence goes with Goodyear Accessories. All Goodyear products are up to the master-standard set by Goodyear Automobile Tires, rulers of Tiredom.

There is a big percentage of profits in accessories. You can readily double your money selling the Goodyear Accessories.

THE GOODYEAR TIRE & RUBBER CO.
AKRON, OHIO
(2141) Makers of Goodyear Automobile Tires

We help you out. We boost your sales. We provide special show cases to hold and sell our accessories. Good-looking cases, well made, are a credit to any store.

Beautiful Show Case FREE

These expensive fine-looking fixtures are found in the best stores everywhere, in big cities and small.

They cost money, but we give them *free*. We have these cases made, pay for them ourselves, and give them away because they sell goods for our dealers. The cost is part of our advertising, the dealer pays none of it. We give you a small case or a large one, depending on the size of your stock. The above illustration is the medium size, 20 inches high, made of mahogany finished metal; glass top and front, shelf and stock room in rear. A case like this would cost you $15, yet we give it to you free to boost your accessory business.

Send Coupon NOW

It costs you nothing—not a cent—on this plan of ours. We give it to each dealer who will carry the Goodyear Tire Accessories. Put this silent salesman on your staff. Reap this big profit too. Get our complete proposition at once. Learn all about this money maker.

Mail This for Facts Today!

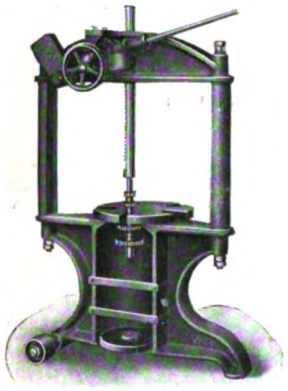
THE ACCESSORY AND GARAGE JOURNAL

Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. IV. PAWTUCKET, R. I., MARCH, 1915. NO.

Two Hundred Automobile Repair Shops Use The
NO. 15 GREENERD ARBOR PRESS



Pressing gears off a transmission countershaft.

Corp Brothers' Garage, Providence, R. I.

Edwin E. Bartlett, Boston,

Dear Sir: The No. 15 Greenerd Arbor Press is proving more useful every day. We would not be without one for three times the cost. We are discovering new uses for the press that we did not think of when we bought it.

You are at liberty to refer anyone to us.

Yours truly,
CORP BROTHERS.

Saybrook Garage, Saybrook, Conn.

Edwin E. Bartlett, Boston,

Dear Sir: The No. 15 Greenerd Arbor Press which we purchased through a dealer is very satisfactory. We have had this in use for six months now, and we find it the most useful and used machine in our shop. We find that our customers appreciate the press.

Yours truly,
G. A. DEWELL.

A large working surface.

They have made a *good* investment, one that pays 100 per cent. yearly. This is a *direct profit.*

The Greenerd Arbor Press helps build up their business and their reputation. This is *indirect profit.*

One successful Repair Man says: "The first thing an automobile repair shop needs is a bench and a vise. The second is a GREENERD ARBOR PRESS."

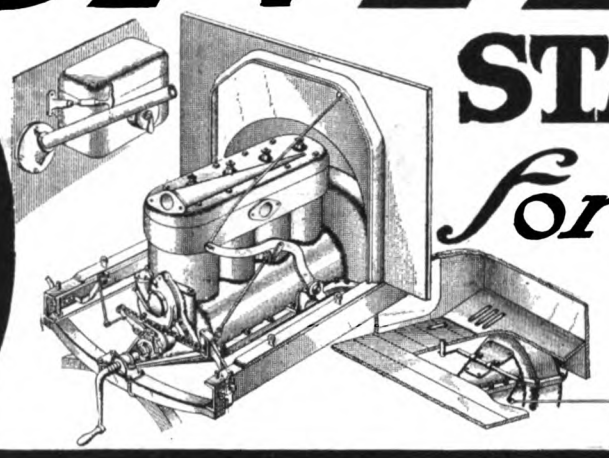
HUNTER



$10 F.O.B. CHICAGO

STARTER for FORD CARS

Makes Every Ford An Ideal Car For Every Purpose

A Positive Mechanical Starter That Can Be Operated From the Seat By a Woman or Child.

An equipment that will make a Ford the equal of any car for convenience and motoring satisfaction, and sold at a price within the reach of every Ford owner.

Simple in construction, every part of great strength and always fully accessible, it requires no adjusting or attention after installation and connection. Starting the motor is by simply drawing a handle from the dash toward the seat, then releasing it to be withdrawn by spring pressure. Compound leverage insures a start with a slight effort.

With an attachment to close the air intake of the carburetor by foot pedal when ready, the engine can be started in lowest temperature. This efficiency is guaranteed.

OWNER CAN INSTALL IT

The Hunter starter can be installed by an owner in an hour's time. Replacing four bolts with other bolts supplied with the starter and placing the nickel plated bracket and handle on the dash. One hole to be bored in the dash and the bracket attached by screws. The starting crank is retained and the entire system is under the hood.

Dealers: **At $10. a guaranteed Starter should go on a big percentage of cars in your territory. Write us.**

A Brand New Assortment

HIGH SPEED
NON-GRAN
BEARING BRONZE

Cored-Bars for Bushings

Takes care of every bushing need to fit any shaft diameter up to 1 1-4 inches.

Means less stock and more money for repairmen. The six different size Non-Gran Bars in this Assortment make 54 standard and all intermediate bushing sizes. This little, inexpensive Assortment of genuine standard Non-Gran Bars provides for every one of the bushing sizes which any automobile repairman has most constant call for. There is not a single bar in the Assortment which will prove a "dead one." Every repair-shop, machine-shop or lathe-equipped garage in the country will recognize in this new Assortment the best possible investment.

Special price on this new 6-54 Assortment is $9.69 net (47 1-4c. per pound) to the trade.

Your jobber has this new Assortment or can get it for you.

NEW LOW PRICES ON STANDARD AND NEAR-STANDARD SIZE NON-GRAN CORED BARS.

By effecting the most rigid manufacturing economies Non-Gran Cored Bars are now offered to the trade at a price down so near the cost of inferior metals as to insure the use of Non-Gran in future in all cases where a bearing bronze is required—in fact, no man will now consider buying anything else but Non-Gran.

52½c. PER POUND NET TO THE TRADE.

List, 75c. per pound with a discount on all standard and near-standard sizes of 30%, making a net price of 52 1-2c. per pound.

LASTS TWICE AS LONG AS ANY OTHER.

Unlike phosphor and other granular bronzes, the structure of Non-Gran is fibrous. The fibres are firmly interlocked and resist the pull of friction. This means slower wear—it means that Non-Gran lasts twice as long as the best of other bearing bronzes. It means none of your time or material is wasted. It means satisfied customers and a big increase in your repair business and profits.

The finest work is but wasted effort if the materials used cannot "stand the pace," while the right sort of materials will add to the value of any sort of work.

ORDER NOW FROM YOUR JOBBER.

If he can't supply you, write us his name, send us your initial order, and we'll try to arrange with him for your future supplies. Do it today! Please address "Dept. M."

FEDERAL

In every detail of construction Federal Tires have Extra Strength assuring Extra Service

Federal Tires are the only tires made with Double-Cable-Base. The strong double steel cables, imbedded in the base close down to the rim, permit the use of a soft and flexible bead-filler which *cannot* cut and grind into the side-walls of the tire. For this reason there are

No Blowouts Just Above the Rim, No Rim-Cutting

These strong steel cables *anchor* the tire firmly to the rim, so that it cannot rock. For this reason there is

No Tube-Pinching and No Danger of Thrown Tires

Equip your car with Federals this year and get the Extra Service that comes from all this Extra Strength.

RUGGED TREAD

Real Scientific Protection Against Skidding

In the Federal "Rugged" Tread you get a value far beyond the selling price. It is a *scientific* non-skid tire. On any kind of roadway, no matter in what direction the wheel tends to slip, the same required number of rugged studs are on the job to *stop it*—gripping the road tenaciously.

Federal Double-Cable-Base Tires are made in all styles and sizes. "Rugged" and Plain Treads

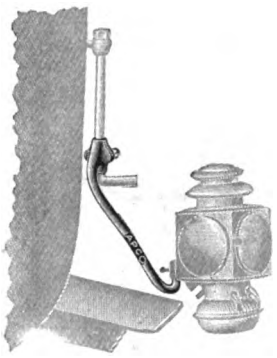
Eight New and Original Ford Specialties

TRADE APCO MARK

Further Proof of Our Slogan: "WE LEAD, OTHERS FOLLOW."

FOR SALE BY ALL LIVE JOBBERS



TAIL LIGHT BRACKET.

On cars where tires are carried at the rear it is impossible to attach the tail light to the original bracket that came on the car. The [redacted] bracket eliminates this trouble and it is fastened to the iron that the top rests on when set back. It is designed to take the regular tail light and number plate bracket, but if desired the number plate can be carried on the axle or fastened to th body, leaving the [redacted] bracket to carry the lamp.

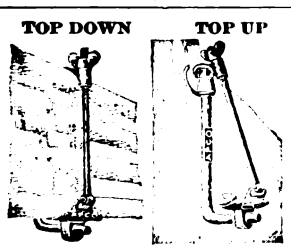
PRICE 75c.

SPRING LEAF LUBRICATORS.

One concern selling an oiling or lubricating device for the leaves of automobile springs, spent $20,000 advertising their product during last year. Another spring maker makes great claims for his springs because they are self-lubricating. There is no question about the advantages of having the springs well oiled. It's only a question of the means. The [redacted] Lubricator, as shown in the cut, consists of a pair of plates with oil reservoirs and felt inserts. These inserts soaked with oil rest against the sides of the spring leaves and give them constant lubrication, which increases the riding qualities 100%. They are made from semi-steel, black enamelled, and are guaranteed to do the work as well as the highest priced article on the market. Set includes four pairs, two pairs for each spring. The only ones on the market that oil both sides of spring.

PRICE Complete $2.00.

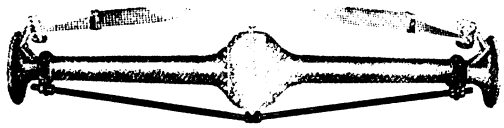
TOP DOWN TOP UP



BOW CLAMP.

This is a great improvement over the old clamp, as it is a permanent fixture on the car and it will hold the bows securely. Finished in black enamel for either Touring Car or Runabout.

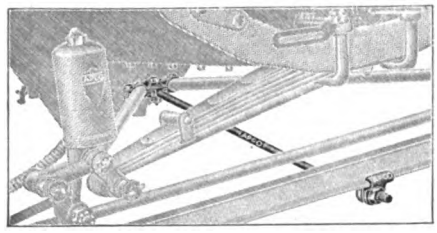
PRICE $1.00 SET.



REAR AXLE TRUSS.

The Rear Axle on the 1915 Ford Car has been strengthened about 50% over any previous type, and this is not the first year that improvements have been made on this unit. To strengthen the old cars we offer the [redacted] Truss, which is made from steel rods and semi-steel castings finished in black enamel. The rods are ½-inch in diameter and strong enough to give the axle the stiffness lacking in its original construction. The clamps go around the castings at the extreme end of axle housing, and do not put any strain on the pressed steel parts. The cradle that fits under the center of the housing is fitted with square sockets to accommodate the square heads that are made integral with rods. Bolts for clamps are square headed, sunk flush in square sockets to prevent turning and to improve appearance. The whole outfit comes packed in a corrugated box 24" long and weighs 5½ pounds. If your axle housing leaks grease or your rear gears are noisy, you need an [redacted] Truss to remedy the trouble. If not you need the Truss to prevent it. Installation is a matter of 10 minutes with no tools but a wrench.

PRICE Complete $1.50.

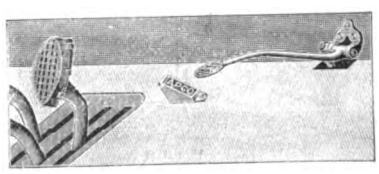


FRONT AXLE BRACE.

The front radius rod on the Ford is made of tubing in which there is more or less spring or give. This give causes the bottom of the front axle to tip or bend back in going over rough roads, causing an unsteadiness in steering. The [redacted] brace consists of two ingenious clamps and a half-inch steel rod with a square head made integral. One of the clamps is attached to the extreme end of the front axle truss rod with three bolts, all having square heads to prevent turning, and the square head on the rod is held in this clamp. The other clamp is attached to the front axle and is held there by two nuts on the rod which go thru clamp. This device is one of the best accessories we have ever offered and is one that you need. Finished in black enamel. Can be put on the car with a wrench in five minutes. Packed in a corrugated box 23" long, weighs three pounds. There is no need of adding 20 pounds to the weight and $5 to the cost of your car when ours will do the work. A new radius rod costs $3, you will never need a new one if your car is equipped with an [redacted] brace.

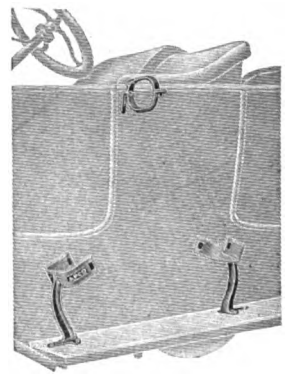
PRICE Complete $1.50.

FOOT ACCELERATOR.



There is no question about the practicability of this device, as 90% of the cars on the market are so equipped, and you will find that nearly all of the drivers use the accelerator constantly, and should you ever install one on your car you would not be without it for many times its cost. It is especially handy in driving through crowded streets, and when touring you can set your hand throttle to run, say 15 miles an hour, and when you come to a hill simply bear down on the foot accelerator till you reach the top, then take your foot off and you are still going 15 miles an hour. Attached in an hour. No machine work. Held in place by three wood screws. Fastens to dash and does not mutilate floor boards. Furnished complete, including foot rest and direction sheet.

PRICE $1.50.



SIDE TIRE HOLDERS.

There are so many new rear tire holders on the market that the public is inclined to overlook the good points in favor of a side tire carrier. Absolutely the only advantage of having the tires on the back of the car is that of balance, and as a pair of shoes weighs but 20 pounds, this is purely an imaginary one. There are hundreds of reasons, however, why you should use [redacted] Side Tire Holders, and the following are a few, any one of which is sufficient for you to decide in their favor. 1. They keep the tires clean. 2. They keep the tires away from the hot exhaust. 3. The tires can be removed in five seconds and replaced in same time. 4. They cannot be lost off the car. 5. They are much neater in appearance. 6. They can be installed in 10 minutes. 7. With them it is possible to carry a trunk at the rear. 8. They make unnecessary the changing of tail light location. 9. They weigh seven pounds less than the lightest rear holder on the market. 10. There are no straps to lose or break. 11. Price is the lowest of any tire holder on the market, irrespective of advantages. 12. Special catch on top bracket locks automatically when closed and lock need not be used unless wanted. 13. Screws that hold bracket to body cannot be removed with tires in place. 14. Lock is solid brass mail type, which opens automatically when key is turned. 15. Lock clasp is rubber covered to prevent rattle. Furnished in black enamel only. Packed in corrugated carton 6" x 11" x 7½", and weighs seven pounds. Complete with bolts, screws and lock. Will fit two 3½" tires or one 3" and one 3½".

PRICE $2.00.

VALVE STEM PACKINGS.

When the valve guides on an engine wear it is impossible to get a perfect mixture, as air is drawn thru the space between the valve stems and the wall of the guides. This results in a skip that is impossible to find, especially at low engine speeds, and full power cannot be obtained from the engine, as part of the suction stroke is wasted by drawing air by the valve stems. The [redacted] packing consists of a special steel stamping and felt washer, which is held in position by valve spring as shown in cut. When in positon the felt both prevents air from entering the cylinders and also lubricates the valve stem, preventing further wear. They are necessary on the new cars as well as old, and the installation in either case is a matter of a very few minutes without tools of any kind.

PRICE per set of Eight 50c.

SELL TIRE ECONOMY

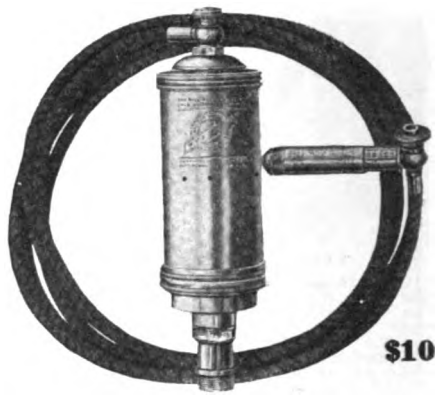
A SURE SAVING FOR OWNERS
BIG PROFITS FOR DEALERS

$2

Utility Whistling Pneu-Meter.

Utility Power Tire Pumps

A tire inflator, attachable at a spark plug opening in a motor valve cap, that is positive in its operation, will afford any pressure, and can be used on any car. No uncertainty, no labor, no expense. The motor does the work when and where you will. Built of finest material, it will give uniform service for years. Compact, easily carried, quickly attached, and always ready when wanted. The Utility Junior Pump is designed for Ford and light cars having tires to 3½ inches diameter.



$10

Utility Pump, Complete with Whistling Pneu-Meter.

Whistling Pneu-Meter

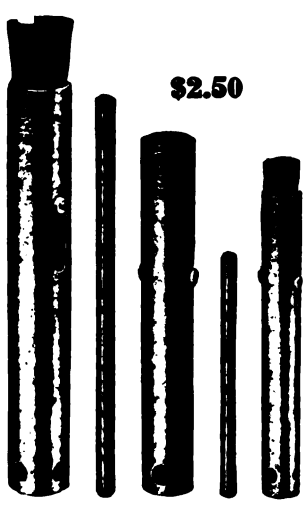
The best protection that science has created against excessive tire inflation, used with the Utility Tire Pumps. This device can be set at any desired pressure of inflation, in five-pound units, from 50 to 120 pounds for the Utility Pump and from 40 to 75 pounds for the Utility Junior Pump. ABSOLUTELY AUTOMATIC in action, when the pressure to which it is set is reached the air by-passes and causes a whistle that can be heard a block. No possibility of excessive pressure or under-deflation; exactly what the tire is designed for and better mileage, less fuel consumption, certain protection of the mechanism of the car and lowest tire cost. It can be used with hand and power pumps, making them automatic.

This is the kind of tire and car ecomony you can sell, Mr. DEALER. It is not a luxury, a convenience, an equipment fad, but a necessity for any car.

Unequalled in construction, in action and in appearance, the Utility Pumps and the Whistling Pneu-Meter are superior to any pumps or protective devices ever produced.

$6

Utility Junior Pump, Complete with Whistling Pneu-Meter.



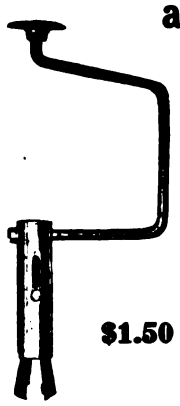
$2.50

Utility Socket Wrench Set, Complete.

Utility Socket Wrench Set

Will take all nuts that can be taken by a 14-socket set, can be adjusted instantly, can be used with all shapes and sizes, does not require fitting; will take all nuts used on automobiles, either hexagon, square, cock or wing nuts; cannot slip or wear nuts, will hold the nut after removal, and nuts placed in the jaws can be set when bolt is inaccessible to the hands. A wrench suited to any purpose, that will take all sizes of nuts from 3/16 to ½ inch inclusive. Packed in canvas bag.

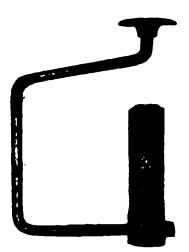
Utility Demountable Rim Wrench



$1.50

Utility Demountable Rim Wrench.

An instantly adjustable jaw socket wrench designed for use with all makes of demountable rims. No screw fittings to adjust as pressure will hold the wrench on the nut, and the lever handle can be operated with both hands. It is a whole tool kit in a single tool. When not in use the wrench can be folded and carried in the tool box.



Utility Demountable Rim Wrench Folded.

Price, West Mississippi River, $18.00

"FOGG" Exhaust Horn
FOR FORD CARS

Still going! Still blowing its clear, mellow signal on thousands of cars throughout the land. Some of the sceptics tell us that the electric horn has supplanted exhaust whistles, but we notice that the old reliable FOGG continues to sell. The reason? Because it is the horn located between the engine and the muffler, where it gets the full blast of the gas. Also because it has a cut-out in the body, so that in buying the FOGG you get two devices in one—a signal and a cut-out.

Price with cut-out $5.00 Without cut-out $4.50

MULTIBESTOS REG.U.S.PAT.OFF. PAT.APP'D.FOR

Follow the White Foot Prints

The distinct superiority of Multibestos has been proved time and again, both by engineering tests and in the every-day service of thousands of car owners.

That it may be distinct in appearance as well as in quality, we mark it with "White Foot Prints."

Not only do the "White Foot Prints" protect the users of Multibestos, but they also afford a great convenience to the dealers who are handling it—for the marks are spaced exactly and can be used for measurement when cutting from stock to fill orders.

So we say to car owner and dealer alike:

Follow the white foot prints,

They lead to satisfaction in brake lining.

THE ACCESSORY AND GARAGE JOURNAL

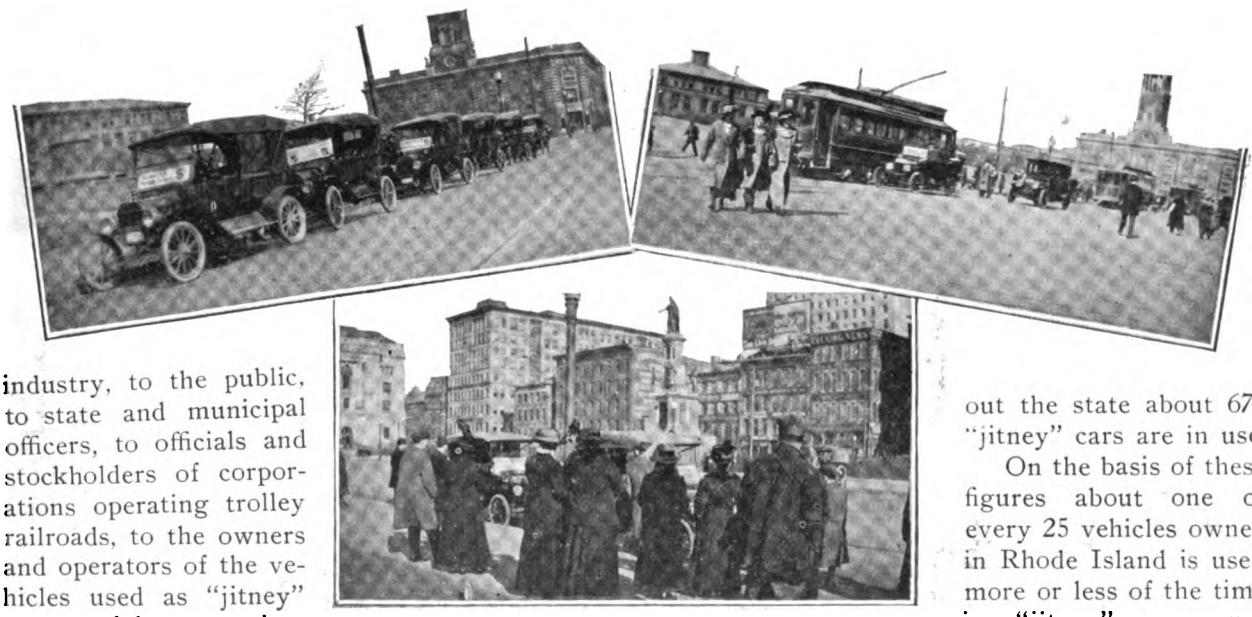
Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. IV. PAWTUCKET, R. I., MARCH, 1915. No. 11

JITNEY SERVICE DEVELOPS MANY PROBLEMS.

Conditions Existing in Rhode Island After Brief Period of Competition with the Trolley Lines are Unparalleled Elsewhere in Country.

MUSHROOM-LIKE in its development in practically every section of the United States, appealing to the people because of the novelty of an automobile ride for a nickel as well as the convenience that is practically possible as compared with the certain routes and the time schedules of the trolley cars, the "jitney" service has within a comparatively brief period become a problem of great importance to the motor vehicle industry, to the public, to state and municipal officers, to officials and stockholders of corporations operating trolley railroads, to the owners and operators of the vehicles used as "jitney" cars, to labor organizations and differing civic bodies. The "jitney" service originated in the West, but in no section of the country has it attained such proportions or precipitated so peculiar conditions in a very brief time as in Rhode Island.



Three General Views, Showing How the "Jitneys" Are Operated in Competition with the Traction Lines at Providence, R. I.

Providence is surrounded by the cities of Pawtucket, Central Falls and Cranston and the towns of East Providence, Cumberland, Lincoln, North Providence, Johnston and Warwick. In these municipalities is a population served by "jitney" cars of either Providence or Pawtucket that approximates 400,000, and at the time this is written there are 507 "jitney" cars licensed in Providence and 119 licensed in Pawtucket, a total of 626. The population of Rhode Island is about 575,000 and the number of machines owned in the state is approximately 16,000. Throughout the state about 675 "jitney" cars are in use.

On the basis of these figures about one of every 25 vehicles owned in Rhode Island is used more or less of the time in "jitney" passenger work, and when the trucks and wagons are deducted from the total the ratio is perhaps one car to 22 or 23. And the number of "jitney" licenses is rapidly increasing. The first license was issued in Providence, Feb. 8, and in Pawtucket, Feb. 19, so one will understand that in a period of less than seven weeks the extremely large number of "jitney" car owners has been

Digitized by Google

impelled to engage in the work. Some men devote all their time to driving, others drive their cars incidental to other occupations, some drivers

One of the Few Larger "Jitneys" in Providence, a 1912 Garford.

serve definite routes, generally those on which trolley lines are operated, and there are those who work during the hours when the travel is greatest, depending upon casual rather than regular patronage.

Most of the machines in use are light, seating four or five passengers, and many are Ford touring cars, although some drivers have larger and heavier vehicles that will seat six or seven. All are open bodies and the cars are used with the tops up. As there are as yet no restrictions the public is carried in any way, the running boards being quite as acceptable as the seats. The faster speed made by the "jitney" cars, the convenience of deviating from a definite route, the accommodation of the drivers, all compensate for the regular operation on certain highways of the trolley cars. The routes always converge in the centres of the cities, and with "jitney" cars passing every minute or less during some periods of the day, they are well patronized.

The machines in use are everything that can be driven, from the antique of 1906 or 1907 to the Ford purchased on installments and just put in service. They are generally individually owned, though some men own and operate a number. As a rule the cars are second hand, and would hardly be enjoyed by the individual who regards appearance, but whatever is operative is seemingly satisfactory to the public.

The owners have formed associations that purpose protection of interests of the members, better service for the people, observance of the desires of the state and city officials, mutual insurance and other objects, and they have offered assistance to charitable organizations that are active in work among the deserving poor. These associations have already sought affiliation with organized labor, and have the support of these bodies. The earnings of the operators who own their machines vary according to the work done, but because of the limited time since the "jitney" service was inaugurated no really definite figures can be given. Some men believe they are making money fast, while others realize they are not more than paying expenses. In this respect the experience of any one or a number is not as yet sufficient to base intelligent estimate.

The revenue of the Rhode Island Company, which operates the system of trolley lines in northern Rhode Island, has already been so much decreased that the company has asked the city council to protect it against the competition of the "jitney" operators, maintaining that as a large taxpayer and contributor to the state and municipal funds through special franchise taxes, that its interests ought to be considered. Legislation is now pending in the General Assembly which is intended to "regulate" the "jitney" service, and pending this city regulation will not be undertaken.

The Rhode Island Company has appealed to the Providence city council and the legislature to protect it against the loss of revenue, which will compel these bodies to act and make decision.

GENERAL NEWS OF THE INDUSTRY.

High Efficiency Methods in Scripps-Booth Factory—Greenleaf Company Merged with the Walter C. Lewis Company.

WITH the advent of the new Scripps-Booth car, manufactured by the Scripps-Booth Company, Detroit, Mich., a new personality has been introduced into the automobile manufacturers' world—R. H. Spear, general manager of the company. Mr. Spear's long experience in factory organization is said to dominate the plant and to be responsible in a large measure for the financial as well as the mechanical development. Fifteen years ago Mr. Spear began as a stenographer in a probate court, became a chief accountant, and later general manager of the Hygeia ice plants. At that point in his career he became a system and organization expert, writing volumes that have become standard authorities upon factory costs and organization, etc., and investigated hundreds of factories throughout the country. He introduced high efficiency methods in the Scripps-Booth organization, and has, it is said, so organized that plant that it can turn out its car with a higher proportion of costly material in its make-up than is usual among the lower-priced makes. William B. Stout designed the Scripps-Booth car, which is now being delivered.

R. H. Spear, Scripps-Booth Manager.

CREDITORS GET 22½ PER CENT.

Receiver Issues Final Report of Trusteeship of the Bankrupt Warren Motor Company.

Creditors and stockholders of the bankrupt Warren Motor Car Company, Detroit, Mich., have received the final report from the Detroit Trust Company, receiver, of the liquidation of the motor company's affairs. The court allowed a 2⅛ per cent. dividend. The total dividend paid to creditors is 22⅛ per cent.

WILL PAY 10 PER CENT. OF CLAIMS.

Proposal Made for Settlement of Speedwell Motor Affairs by Liquidation Out of Court.

General merchandise creditors of the Speedwell Motor Car Company, Detroit, Mich., may receive 10 cents on the dollar on their claims if the proposition for settlement of the company's affairs by liquidation outside of the court is accepted by all the interests concerned. The merchandise claims against the company are stated to total nearly $63,000. The court has authorized the receiver to borrow $10,000 with which to repair certain parts of the plant, and to guard it until operations may be resumed.

HOUK WHEEL EXPANSION.

George W. Houk Buys Plant of the American Spoke and Nipple Company, and Will Move Machinery to Buffalo.

The plant of the American Spoke and Nipple Company, Detroit, Mich., has been purchased by George W. Houk of the Houk Manufacturing Company, and the machinery will be removed to Buffalo, N. Y., where the Houk company has a plant which at the present time is using 30,000 spokes and nipples daily. The American Spoke and Nipple Company had a capacity of 25,000 per day.

HANDLEY GOES TO JACKSON.

Farewell Banquet Given J. I. Handley on Eve of Departure from Indianapolis with Marion Company.

J. I. Handley, president of the Mutual Motors Company and the Marion Motor Company, Jackson, Mich., was the guest of honor at a testimonial banquet at the Columbia Club, Indianapolis, Ind. The occasion was Mr. Handley's leaving the city for Jackson, Mich., following the removal of the Marion company and its officers. About 75 of Indianapolis' most prominent men were present to speed the parting guest, among them being Lieutenant-Governor O'Neil and Charles L. Bookwalter, ex-mayor of Indianapolis.

ANTICIPATING ITS OBLIGATIONS.

General Motors Company Is Said to Be Ready to Redeem $7,852,000 Worth of Its Notes.

Having a liberal amount of surplus cash in its treasury, the General Motors Company, New York City, is said to be ready to redeem its outstanding six per cent. first lien five-year sinking fund gold notes to the approximate amount of $7,852,000, due Oct. 1, the price to yield three per cent. for the unexpired time. These notes are the unredeemed part of a $15,000,000 issue, and after their payment it is stated that there will still remain in the treasury of the company between $6,000,000 and $7,000,000. Presentation should be made to Lee, Higginson & Co., and J. W. Seligman & Co. The prices April 1 will be 101.455 and accrued interest; April 15, 101.342, and May 1, 101.213.

NEW MAKER FOR HERCULES CARS.

Machines Are to Be Built by the Kentucky Wagon Company, Maker of Urban and Old Hickory Trucks.

An agreement with the Hercules Sales Company, a new organization which took over the patterns, blue prints, name of the car and output of the Hercules Motor Car Company, New Albany, Ind., gives the right of manufacture of the cars to the Kentucky Wagon Manufacturing Company, Louisville, Ky.

The Hercules Sales Company was organized recently with a capital stock of $100,000, and has the following as officers: A. H. Ross, president; Charles Kelso, vice president; C. L. Caron, secretary and treasurer. There is no stock for sale. The company, which controls the selling rights of the Hercules cars, will supply the 400 agents. At the beginning the Kentucky wagon company will have a daily capacity of about 25 cars, which, President Ross states, will later be increased to 100 cars a day.

BID $800,000 FOR PROPERTY.

Formal Offer Made by the Stockholders' Committee to Court for Walpole Tire and Rubber Company.

The receiver of the Walpole Tire and Rubber Company, Walpole, Mass., filed in the United States district court, Boston, an offer in writing made by the joint stockholders' committee for the property of the company. The offer stated that the committee in event of a resale of the property being ordered by the court will bid not less than $800,000, in accordance with agreements on file with the State Trust, the Federal Trust and the American Trust companies. The hearing on the confirmation of the sale to the receivers' and creditors' committee was postponed until April 5, because the parties to the sale had not been able to agree on the terms of the decree of the sale.

GREENLEAF HEADS NEW CONCERN.

With It Is Merged the Walter C. Lewis Company—Some of the Largest New England Accounts Are Carried.

The Greenleaf Company, of which A. E. Greenleaf is president and G. R. Dunham treasurer, has been organized to conduct a general advertising agency, with offices at 185 Devonshire street, Boston, and with this has been merged the Walter C. Lewis Company, for many years one of the best known agencies in New England. Mr. Lewis is a member of the Greenleaf Company, but he will devote more of his time to the Genesee Light and Power Company, of which he is president, and give the same personal attention as formerly to his advertising clients.

Mr. Greenleaf is a practical printer of wide experience. He entered the advertising field about 12 years ago, and for the past seven years was connected with Wood, Putnam & Wood, a widely known firm, and has handled many of the largest accounts of New England. He has been remarkably successful. Mr. Dunham has been identified with advertising agencies for 17 years, being first connected with the Pettengill agency in the bookkeeping department, and for 10 years he was in charge of the accounting department of Wood, Putnam & Wood.

A. E. Greenleaf, President Greenleaf Company, Boston, Mass.

The Greenleaf Company has a very large clientele, including more than a score of the largest general advertisers in New England, and among Mr. Greenleaf's personal clients are a number of the best known and most representative concerns in the motor vehicle industry, whose interests he has handled with decided success. The company's organization has been developed to afford an exceptional service, and its purpose is to serve clients in all sections of the country.

BUSINESS EXCEEDED ALL RECORDS.

J. I. Case T. M. Company's Annual Report for 1914 Shows Largest Gross Sales in Corporation's History.

The annual report for 1914 of the J. I. Case Threshing Machine Company, Racine, Wis., shows the largest gross sales in the history of the company, which are stated to be $14.395,384. Of that amount, $12,178,286 were for domestic sales and $2,217,097 for foreign sales. Sales for the last half of the year exceeded those for the first half, which indicates increased business for this year.

After redeeming and cancelling $1.500,000 under the trust deed dated Feb. 1, 1914, on Dec. 1, there was left outstanding $10,500,000 as of Dec. 31. The indebtedness on bonds and notes was reduced to the lowest point of year on Dec. 24, being stated as $12,250,000, while highest point was reached on July 5, with a total liability of $16,785,000.

OVERLAND ORDERS EXCEED RECORD.

The Willys-Overland Company's Business the First 25 Days of March the Greatest in Its History.

Sales during the first 25 days of March exceeded by 1300 cars the sales made in the entire preceding month of February by the Willys-Overland Company, Toledo, O. They were double those of the corresponding month of 1914 and orders were received at the rate of 2500 a week. The increased business has compelled the company to work its 8600 men at full capacity, and some departments are now operating on a 24-hour schedule. The company first passed the 300-cars-a-day mark on Feb. 15. March 22 there were shipped 330 cars, which establishes a record for the Willys-Overland Company.

STOCKS SHOW GOOD EARNINGS.

The American-LaFrance Fire Engine Company Declares Dividends on Preferred and Common Stocks.

An initial dividend of one per cent. on its common stock, payable May 15 to stock of record May 10, was declared by the American-LaFrance Fire Engine Company, Elmira, N. Y. The regular quarterly dividend of 1¾ per cent. on preferred stock, payable April 1 to stock of record March 25, was also declared.

YOUNG CONCERN DOING BIG BUSINESS.

Hoover Ball Bearing Company, Less Than Two Years Old, Is Forced to Expand Plant.

The Hoover Steel Ball Bearing Company, Ann Arbor, Mich., is erecting a new factory building, 250 by 60 feet, to take care of the rapid increase of its business since it started manufacturing little more than two years ago. With the addition the company will employ 230 men, as against 90 in 1913.

GIBSON JOINS MADISON MOTOR.

President of Gibson and Empire Automobile Companies Resigns to Head New Corporation.

Disposing of his interests in the Gibson Automobile Company and the Empire Automobile Company, both of Indianapolis, Ind., Cecil Gibson goes to the Madison Motor Company, whose plants are at Anderson, Ind., and Berlin, Can. Mr. Gibson takes charge as president and general manager, and his associates are Henry Nyberg, W. E. Moore, C. F. Wood of Washington, D. C., and Thomas Forbes. It is said that the company will build a four-cylinder car to sell for about $750, while beginning July 1 an eight-cylinder machine will be manufactured.

SAXON'S DOUBLE CHECK INSPECTION.

Manufacturer of Saxon Car Provides Unusual Inspection Checks on Parts Made by Others.

The Saxon Motor Company, Detroit, Mich., has instituted a double checking system in the plants where parts and material for Saxon cars are manufactured, which is intended to insure the quality and high grade of workmanship. While the plan involves considerable expense to the company, it is said to more than pay, by eliminating waste or loss through defects.

"If a mechanical part or a piece of material is inspected at its early stages", said C. C. Cross, the Saxon factory manager, in explanation of the plan, "and then again before it finds a place in the finished product, a quality motor car is the assured result. The inspection of our cars will not be confined to an inspection before the cars are shipped, but under the direction of the chief inspector, who is one of the most expert experimental engineers in the country, a number of deputies will be placed in the various plants where the company buys parts. All parts will be inspected before shipment to the Saxon factory. This method is a guarantee to our customers that our product is right".

NEW LIGHT DELIVERY VEHICLE.

Ohioans Plan to Manufacture a 500-Pound Load Capacity Machine Which Will Be Sold for About $550.

Statement is made that a new 500-pound light delivery vehicle, listing at $550, weighing 1350 pounds, and provided with a 20-horsepower, four-cylinder valve-in-the-head motor, is to be manufactured in Lima, O., by C. E. Miller and F. M. McGraw. Mr. McGraw was formerly connected with the McIntyre Manufacturing Company, Auburn, Ind., as a buyer.

HOUSE ORGAN FOR APCO.

Maker of Well-Known Apco Ford Specialties Publishes a Monthly Folder to Stimulate Trade.

The Auto Parts Company, Providence, R. I., maker of the Apco line of Ford specialties, is publishing a house organ termed the "Ford Dealer", which contains numerous items of interest to the Ford dealer and garage man. It is issued on the 20th of each month, and will be mailed free to the trade upon request.

PERSONAL NEWS OF THE INDUSTRY.

J. J. Cole, Indianapolis, president of the Cole Motor Car Company, believes that this year thousands of automobile owners will tour the United States, especially to the San Francisco and San Diego expositions. He is receiving the cooperation of the officials of both the expositions and the various highway and good roads associations in his promotion of touring.

J. J. Cole, President of the Cole Motor Car Company.

Charles A. Slocum, Pawtucket, R. I., proprietor of the William H. Slocum Company, blacksmith and autogenous welder, died recently at his home. The business of the company will be carried on by the surviving members of his family. Robert F. MacSwan will continue to manage the affairs of the company.

Sidney D. Waldon, Detroit, has joined the Cadillac Motor Car Company in an advisory capacity in the engineering department, as well as in assisting the management in a general way. He was formerly vice president in charge of forework and current engineering of the Packard Motor Car Company.

K. W. Zimmerscheid, Detroit, chief metallurgist of the General Motors Company, has been elected chairman of the standards committee of the Society of Automobile Engineers, succeeding Henry Souther. It is the aim of the organization to bring together members of the standards committee at least four times a year.

E. A. Kelley, Detroit, until recently manager of the Chicago branch of the Splitdorf Electrical Company, has been appointed manager of the Apple Electric Company at 972 Woodward avenue.

L. F. Goodspeed, St. Louis, for years chief engineer of the Moon Motor Car Company, has severed his connection with the company. He is succeeded by George F. Heising, who was formerly purchasing commissioner of the company.

W. B. Dean, Detroit, has joined the staff of Smalley Daniels at 870 Woodward avenue. He was formerly purchasing agent of the Hearsey-Willis Company of Indianapolis. He will have direct charge of the jobber's department.

F. H. Ehnts, St. Louis, has severed his connection with the Dorris Motor Car Company. He was with that company for a period of eight years.

F. F. Beall, Detroit, has become vice president in charge of manufacturing of the Packard Motor Car Company. He was formerly factory manager for that concern.

Frank J. Girard, Columbus, O., has become financially interested in the Capital Motor Car Company, agent for the Reo car. He was formerly manager of the Peerless Motor Car Company in that city.

George B. Grant, Pittsburg, Penn., has become associated with the Pittsburg Apperson Company and will have supervision and appoint agents in western Pennsylvania, eastern Ohio, western Virginia and western Maryland. He was formerly associated with the agencies of the Oakland Motor Company.

George E. Seidel, Richmond, Ind., has become treasurer and general manager of the Pilot Motor Car Company. He is also president of the Seidel Buggy Company. However, he will devote his entire time to the management of the Pilot Company.

J. R. Goetcheus, Muncie, Ind., has accepted a position as general manager of the Muncie Oil Engine Company. He was formerly general manager of the Muncie Gear Works for a number of years.

G. C. Core, Jackson, Mich., has been appointed advertising manager of the Sparks-Withington Company. He is a newspaper man and for the past three years has been connected with the automobile department of the Chicago Daily Journal.

Kenton Harmon, New York City, has been appointed district manager of the Dort Motor Car Company, with headquarters at 1790 Broadway.

J. T. Travis, Brooklyn, N. Y., has been appointed sales manager of the Carpenter Motor Vehicle Company. The company is agent for the King car.

R. H. Henderson, Los Angeles, Cal., is now sales manager of the Pacific Metal Products Company, distributor of the Moore and Commerce motor trucks.

J. F. Bowman, Detroit, assistant to the secretary and treasurer of the Federal Motor Truck Company, has been appointed director of sales.

J. H. Liston, Detroit, has been appointed manager of the offices of the Thermoid Rubber Company, which was recently opened in the Dime Savings Bank building.

W. M. Perrett, Detroit, has been appointed branch manager of the Republic Rubber Company of Youngstown, O., with his headquarters at 1001 Woodward avenue.

L. C. Bailey, Toledo, O., has become manager of the Toledo-Mercer Company, with headquarters at the 21st Street Garage.

W. G. Schmunk, Cleveland, has been appointed manager of the local branch of the Peerless Motor Car Company. He has been associated with the company for the past five years.

W. J. Trudell, travelling representative of the Goodyear Tire and Rubber Company, Akron, O., has his headquarters in Jackson, Mich.

W. A. Pearnes, Seattle, Wash., has become identified with George W. Miller at 714 East Pike street. He has charge of the used parts and supply departments.

H. R. Roberts, Portland, Ore., has become sales manager of the Frank C. Riggs Company, distributor of the Packard car. He is president of the Portland Automobile Dealers' Association.

J. F. Buhr, Detroit, has been elected president of the American Pattern Works. William Blanck is vice president and Edward Stephens, secretary.

J. O. Stokes, Trenton, N. J., president of the Thermoid Rubber Company, is touring the South.

Walter M. Towne, Detroit, formerly with the Ajax-Grieb Rubber Company, is now associated with the F. E. Castle Company as general sales representative.

Lester F. Rogers, Boston, Mass., is now associated with the Winton branch in that city. He was formerly with the Henley-Kimball Company, distributor of the Hudson car.

H. L. Sinclair, Providence, R. I., has associated himself with the A. W. Flinn. The company will handle the new worm driven Chase line.

C. C. Hanch, South Bend, Ind., has accepted a position in the executive organization of the Studebaker corporation. He was formerly connected with the Nordyke & Marmon Company.

W. E. Anderson, Dayton, O., is now district manager of the Dayton Rubber Manufacturing Company. His headquarters will be at 2011 Michigan avenue, Chicago.

William Mitchell Lewis, Racine, Wis., was elected president at the annual meeting of stockholders, held recently.

L. W. Dingwall, Chicago, has become associated with the Thordarson Electric Manufacturing Company. He was formerly sales manager of the Chicago Drop Forge Company.

R. H. Johnson, President of the Automobile Dealers' Association, New York City.

R. H. Johnson, Cleveland, has been unanimously re-elected president of the Automobile Dealers' Association, New York City. He is a member of the White Company in the former city. Charles H. Larson of the Oldsmobile Company was re-elected vice president and Charles M. Brown of the Winton Company was elected secretary and treasurer.

J. A. Mathews, Detroit, is manager of the reorganized Hupp-Yeats Electric Company. The company will continue to manufacture electric pleasure cars.

Charles P. Kennedy, Jackson, Mich., has been appointed secretary and treasurer of the Alloy Steel Spring Com-

Digitized by Google

pany. He was formerly with the local branch of the American Fork and Hoe Company.

J. W. Cully, Springfield, Ill., has been appointed superintendent of the Wilson Tire and Rubber Company, both at Detroit and Springfield.

C. W. Findeisen, General Sales Manager of the Findeisen & Kropf Company.

C. W. Findeisen, Chicago, has been appointed general sales manager of the Findeisen & Kropf Company, manufacturer of the Rayfield carburetor.

S. H. Veal, Newark, N. J., formerly secretary and general manager of the Cleveland Motor Car Company and later secretary of the Colt - Stratton Company, has joined the Saxon Motor Car Company and will locate at 278 Halsey street.

William E. Leggett, Boston, has become associated with the Paige - Detroit Company.

E. G. Shiek, Cincinnati, has been appointed manager of the Goodyear Tire & Rubber Company's local branch.

D. G. Caywood, Utica, formerly New York manager of the Brunner Manufacturing Company, has been appointed sales manager with headquarters at the factory.

Joseph F. Burns, Boston, has joined the C. A. Robinson Company, distributor of the Regal car. He was formerly associated with the Jackson Motor Car Company of that city.

R. P. Bishop, Detroit, has been appointed assistant sales manager of the King Motor Car Company. He was formerly connected with the Cutting Motor Car Company.

William A. McLain, Jr., New Bedford, Mass., is now sales manager of the Velie agency for the Chamberlain Garages Company, agents for New Bedford and Fall River. He was until recently with the Sanford Street Garage, Springfield, Mass.

W. A. Haslett, Detroit, has been appointed manager of the local branch of the Goodyear Tire and Rubber Company. He managed the Goodyear branch in Pittsburg, Penn., until recently.

Merrill B. Moores, Portland, Ore., who has been identified with the automobile industry for the past seven years, has become associated with the Northwest Auto Company, distributor of the Cole and Reo cars.

Irving B. Meers, Indianapolis, has been appointed commercial manager of the Empire Automobile Company. He is at present on an extended trip through the West.

Hugh T. Porter, New York City, has become sales manager of the Detroit-Cadillac Motor Car Company. He was formerly associated with the Locomobile branch in that city. He succeeds J. H. Johnson, resigned.

Charles R. Talbot, Detroit, has been elected president of the Holihan Manufacturing Company. He is vice president of the National Bank of Commerce in that city.

J. B. Orman, Indianapolis, has been placed in charge of the special equipment department of the Premier Motor Manufacturing Company, by the trustee, Frank E. Smith. Mr. Orman was advertising director of the company before it went into the hands of a receiver.

Henry Lonsdale, Detroit, has become identified with the Denby Motor Truck Company, having been elected vice president. He was formerly associated with the Krit Motor Car Company and the Cadillac Motor Car Company.

W. E. Biggers, Detroit, has joined the Hyatt Roller Bearing Company in the capacity of advertising manager. His headquarters will be at the local office, though he will spend much of his time travelling. He has been with the Packard and Ford companies.

S. Vance Lowenstien, Philadelphia, has become general manager of the Schwarz Wheel Company.

Frank DeWitt, Detroit, has charge of the office of the Electric Welding Products Company, Cleveland, and is located at 1515 Ford building in the former city.

Percy Owen, Detroit, sales manager of the Chalmers Motor Company, returned from Europe lately.

S. K. Pittman, Detroit, has resigned as director and treasurer of the Detroit Steel Products Company. He is in California for a sojourn of several weeks.

Robert Garden, New York City, who is at the head of the Harrolds Motor Car Company, is recovering from pneumonia.

Herbert N. Leonard, Detroit, has been appointed general sales manager of the Ferro Machine and Foundry Company. He will now take over the sales direction of Ferro automobile castings, marine and stationary engines, rowboat motors and other products.

C. L. Diers, Indianapolis, manager of the local branch of the Goodyear Tire and Rubber Company, has been given full supervision over the branches at Louisville, Columbus and Dayton. He will have headquarters at Indianapolis.

Ray McNamara, Detroit, has joined the engineering staff of the Maxwell Motor Car Company. He is well known to the industry.

Joe Warren, Minneapolis, has become a member of the sales staff of the Twin Cities Automobile Company. He was formerly affiliated with the Chalmers Motor Car Company, Detroit, and was travelling representative for the Krit interests.

Hugh McFarlane, Chicago, president of the H. McFarlane & Co., manufacturer of motor trucks, died at his home recently. The company was established in 1854 and did a considerable local business.

E. E. Waite, Framingham, Mass., chief engineer of the Standard Woven Fabric Company, and T. J. Daley, sales manager for that company, have been calling on automobile engineers in Detroit gathering data for use in establishing standards for the company's research departments, as Multibestos, the product of that company, is used extensively in motor car equipment.

Lee Anderson, Detroit, president of the Adcraft Club of that city, has been appointed commissioner of the "Made in U. S. A. Industrial Exposition", to be held in Grand Central Palace, New York City, March 6 to 13.

A. N. Stanley, St. Louis, is now district manager for the Fisk Rubber Company of Chicopee Falls, Mass. He also manages the company's local branch.

Charles H. Spencer, Philadelphia, has resigned as advertising manager of the Autocar Company and will establish an advertising service business in the automobile field. He will make his headquarters in the Land Title building.

Winfield S. Williams, Dallas, Tex., has been appointed manager of the Studebaker branch in that city, succeeding C. W. Hartman, resigned.

John R. Lee, Detroit, in charge of the sociological department of the Ford Motor Company, addressed the Detroit Chapter of Sons of the American Revolution recently on "The Immigrant as a Worker and a Citizen".

Hugh Chalmers, Detroit, has been chosen for the third successive time as president of the Athletic Club of Detroit. Henry B. Joy is the vice president.

J. L. Replogle, Pittsburg, Penn., formerly vice president and sales manager of the Cambria Steel Company, is now vice president and general manager of sales of the American Vanadium Company.

Thomas F. Skelly, New York City, has been appointed manager of wholesale sales of the Dimond-Apperson Motor Company. He was for five years connected with the sale of Apperson cars in the Des Moines, Ia., territory.

John N. Willys, Toledo, president of the Willys-Overland Company, estimates, that 500,000 automobiles will be produced in the United States this year, valued at approximately $500,000,000. In a short period of two weeks his company did more than $3,000,000 worth of business.

John N. Willys, President of Willys-Overland Company, Toledo, O.

E. H. Parkhurst, Cleveland, vice president of the Yuster Axle Company, has assumed active management of the company. He was formerly vice president of the Peerless Motor Car Company.

C. R. Green, Dayton, has accepted a position as chief engineer of the Mead Engine Company. He was associated with the Speedwell Motor Car Company in a similar capacity.

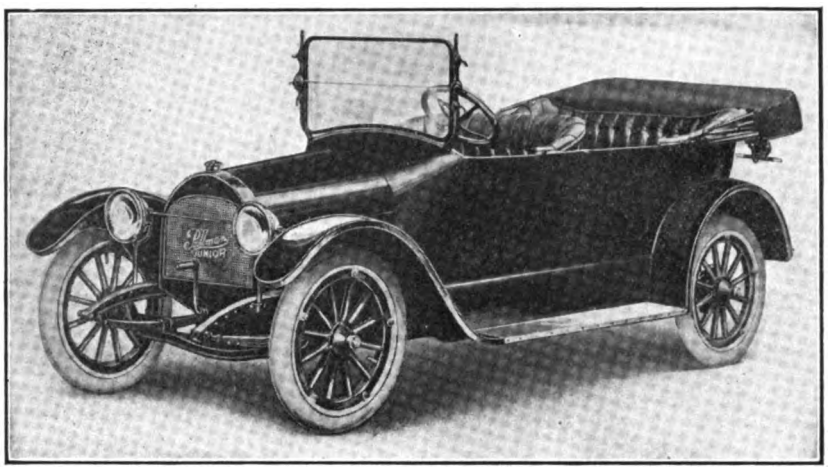
NEW PULLMAN, JR., CAR.

A New Light Five-Passenger Car Listed for $740.

AMONG the new light and low-priced cars for 1915 is the Pullman Junior, manufactured by the Pullman Motor Company, York, Penn., which is listed at $740. This



Three-Quarter Front View of the New Pullman Junior, Showing Low-Hung, Streamline Appearance.

machine has a wheelbase of 110 inches, 30 by 3½-inch tires, cantilever springs and a streamline body.

The Pullman Junior has a unit power plant with four-cylinders cast en bloc, with separate cylinder head, inlet and exhaust pipes, and a barrel type aluminum crank case, which includes the flywheel housing. The motor, an L head type, has a bore of 3¾ inches and a stroke of 4¼, giving it an S. A. E. rating of 22.50 horsepower. All the valves are on the left side, completely enclosed, and have cast iron heads and steel stems. The clear diameter is 1⅝ inches and the lift 7/32-inch. The valves are operated by a chain driven camshaft, and the mechanism is adjustable.

Thermo-syphon cooling is employed in connection with a honeycomb radiator of special Pullman type. The three crankshaft bearings are lubricated by positive feed from a plunger pump operated from the rear exhaust cam, the oil passing through a sight feed on the dash and overflowing to supply the splash basins in the bottom of the crank case. An Apelco 12-volt motor-generator is employed, and this is located on the right side of the motor, the energy being applied to the crankshaft of the engine by means of a silent chain operated in oil. The Splitdorf ignition distributor is mounted on the generator, in the conventional manner.

The carburetor is a Stromberg and this is fed by gravity from an eight-gallon fuel tank located in the cowl. The oiling is by force feed and splash system with a sight feed on the dash. The transmission is a selective sliding type, ball bearing and has three speeds forward and reverse and clutch is a multiple-disc, running in oil, woven wire asbestos against steel. The emergency brake lever and pedals are all carried on the same housing, and the power plant is supported at three points, the two at the rear being on a cross member, which includes a ring attached by the same bolts which hold the engine and transmission together. Back of the transmission is a single universal joint, and directly over it is a round cross member from which is suspended by two links the yoke at the forward end of the propeller shaft housing. This yoke takes the rear axle torque, but the thrust is taken by the springs. The rear axle is of the three-quarter floating type and is fitted throughout with ball bearings. The brakes are 1¾ inches wide, acting on 10-inch drums.

Full cantilever rear springs are employed, and semi-elliptic springs are used in front. A left drive and centre control are used, and the emergency brake lever is located in the centre.

The body is a low-hung type, having a streamline effect. The radiator and hood are rounded, and the windshield is curved to fit the cowl snugly. This windshield is a rain vision clear vision, ventilating design, providing a support for the forward end of the one-man top.

CASE REDUCES PRICES.

Prices of Models 35 and 40 Reduced. Model 25 Increased.

FOR the 1915 season the J. I. Case Threshing Machine Company, Racine, Wis., has reduced the prices of two of its cars, models 35 and 40, and increased the price of model 25. Model 35 has been reduced from $1850 to $1600, while the 40 has been reduced from $2300 to $1800. Model 25 has been considerably altered from the 1914 car, and its price has been increased from $1250 to $1350.

One of the principal changes in the 25 model is the lengthening of the wheelbase from 110 inches to 115½, by the use of cantilever rear springs instead of platform suspension. The tire sizes have been increased from 32 by four inches to 34 by four, and magneto ignition has been replaced by battery, using the accumulator of the Westinghouse cranking and lighting system. The greater number of the parts of 1915 Case cars will be made in the shops at Racine, including the motor and axles.

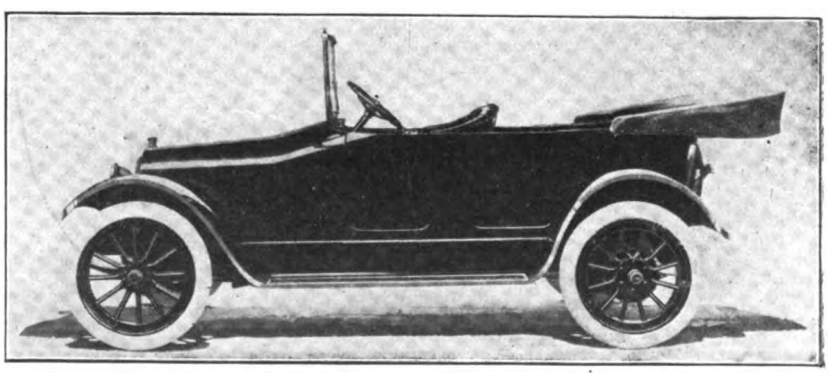
The model 25 motor inlet manifold is heated by a by-pass from the exhaust, and another change is the shifting of the spark plugs from the sides of the T head cylinders to the centre, where the priming cocks were located in the 1914 models. The four-cylinder, water cooled motor is a T head type, with cylinders cast in pairs, and the bore of 3¾ inches and stroke of 4¾ gives it a horsepower rating of 22.50, S. A. E. formula. But the company states that 35 horsepower is easily developed on brake horsepower tests.

A Stromberg carburetor is employed. Shifting the gasoline tank from under the front seat to the cowl has permitted the carburetor to be mounted in a higher position and still be fed by gravity. The lubrication is by constant level splash with a plunger pump forcing additional oil to the crank case, a sight feed being carried in the line between the pump and the case. The ignition is by a Westinghouse high-tension system, employing a separate unit, with automatic spark control. The transmission system includes a disc clutch and a three-speed gearset fitted with Timken bearings, and the rear axle is a Weston-Mott three-quarter floating type, with a pressed steel housing.

A Westinghouse six-volt system affords energy for starting and lighting, and the head, tail, dash, work light and double-bulb arrangement for dimming purposes in the headlights, are on a single-wire system.

The Case 35 is a larger car and this has a four-cylinder motor, water cooled, T head, with cylinders cast in pairs, having a bore of 4¼ inches and a stroke of 5½. The motor has the general lines of that of the model 25; a Bosch dual system of ignition and a Rayfield carburetor are used. In a unit with the motor is a disc clutch and three-speed gearset, and the final drive is by shaft to a full floating axle. As in the 25, the starting and lighting system is a Westinghouse, and the wheelbase of the 35 is 120 inches.

The Case model 40 has a 124-inch wheelbase, and the motor is similar in design to those of the cars described, having a bore of 4½ inches and stroke of 5¼, giving it an S. A. E. rating of 32.40 horsepower. It is fitted with the Bosch two-point ignition system, and the carburetor is a Rayfield. The model 40 is the only one of the three having right hand drive and control.



The 1915 Case 25 Model, Which is Featured by a Longer Wheelbase, Case Made Motor and Axles and a Pure Streamline Body Effect.

CONTEMPLATED NEW BUILDING OPERATIONS.

PLANS AND SPECIFICATIONS.

John McShain, Philadelphia, Penn.; two-story brick garage, 22x40, $865; to be erected at southwest corner 16th and North streets.

Wesley L. Blithe, Fern Rock, Penn.; one-story stone garage; 21x28.

Dr. A. E. Prince, Springfield, Ill.; two-story garage, 50x115; to be erected at Bloomington, Ill.

Henry A. Laughlin, Pittsburg, Penn.; two-story automobile show building; 100x133; to be erected at Penn avenue and Whitfield street.

W. G. Uffendell, 332 South Michigan avenue, Chicago, Ill.; one-story garage, 100x180.

E. E. Sargent, Naperville, Ill.; one-story garage, 60x80.

Joseph Marx, 3609 Broadway, New York City; one-story garage, 50x143; $12,000.

Jacob Weihl, 1400 Brook avenue, New York City; one-story garage, 19x14.

B. H. Kallfelz, 535 Court street, Syracuse, N. Y.; one-story garage, 60x98; $2000.

Walter S. Hodges, Brookline, Mass.; one-story garage, 24x21.

Patrick Creeden, Salem, Mass.; two-story garage, 53x175.

George S. Pullen, 55 Spencer avenue, Waterbury, Conn.; one-story garage, 14x20, $500.

Robert C. Keimm, 9 Clinton street, Newark, N. J.; one-story garage, 20x20.

W. Michaelson, Palisade, N. J.; one-story garage, $4000; to be erected at Grantwood, N. J.

H. P. Wolhsen, 554 West James streets, Lancaster, Penn.; two-story garage, $1000.

W. G. Scarlett, Pratt and President streets, Baltimore, Md.; one-story garage, $10,000.

Marietta Motor Car Company, 113 Front street, Marietta, O.; two-story garage, $10,000.

T. J. Petrie, Marion, Ind.; one-story garage, 40x50.

J. M. Lutz, Scranton, Kan.; two-story garage, 36x36.

A. W. Harwood, 2644 Aldrich avenue, Minneapolis, Minn.; four-story garage, 66x176.

R. D. Weakley, Central National Bank building, St. Louis, Mo.; one-story garage, 20x25.

Willis Davis, 212 East Elin street, Elchita, Kan.; one-story garage, 12x18.

J. H. Davis, Clarksburg, W. Va.; one-story garage, 40x75, $6500.

Frank Hoger, South Bethlehem, Penn.; one-story garage, 20x35.

A. M. Moreland, Bessemer building, Pittsburg, Penn.; two-story garage, 30x40, $7000.

William Rulich, 26 Clark street, Hartford, Conn.; two-story garage, 100x37.

P. McGovern, 125 Washington street, Hartford, Conn.; two-story garage, 52x52.

Harry Denny, 518 Sherman street, Watertown, N. Y.; one-story garage, 22x30.

Frank C. Soule, Syracuse, N. Y.; two-story garage, 24x30, $10,000.

William C. Doran, Bristol, Penn.; two-story brick garage, 33x83.

John Morrison, 193 West Duncannon street, Philadelphia, Penn.; one-story brick and stone garage, 16x14, $175.

Sylvester James, 1439 Bainbridge street, Philadelphia, Penn.; one-story frame garage, 12x12, to be erected at 1849 Miller street, Camden, N. J.

W. S. Eastlack, 420 Benson street, Camden, N. J.; one-story brick garage, 12x16, to be erected at 1338 Kenwood avenue.

W. H. Owens, Lebanon, Mo.; one-story garage, 75x100, $5000.

M. Simmons, Springfield, Mo.; one-story garage, 65x230, $10,000.

Martin Stamm, 4012 Juniata street, St. Louis, Mo.; one-story garage, 20x20.

H. J. Wrape, 5605 Von Verson avenue, St. Louis, Mo.; one-story garage, 22x20.

L. E. McQuay, 3208 Castleman avenue, St. Louis, Mo.; one-story garage, 18x28.

John Coultas, 950 Beach avenue, St. Louis, Mo.; one-story garage, 50x150.

A. M. Todd, 211 Kalamazoo avenue, Kalamazoo, Mich.; one-story garage, 30x61, $2500.

William Shapespeare, Kalamazoo, Mich.; one-story garage, 60x75, $4000.

Charles Stolzenback, Lima, O.; one-story garage, 20x30.

C. G. Dailey, 1502 Cardinal street, Cleveland, O.; one-story garage, 27x12, $3000.

National Electric Lamp Association, Cleveland, O.; two-story garage, 37x50.

Franz C. Warren, 767 Hippodrome building, Cleveland, O.; one and two-story garage, chauffeur's apartment and service building, 50x150.

Yellow Taxicab Company, 701 American building, Baltimore, Md.; two-story garage, $50,000.

P. C. Ruth, Manhattan building, Philadelphia, Penn.; one-story garage, 16x22, to be erected at Elkins Park, Penn.

Robert H. Henderson, 5522 Walnut street, Philadelphia, Penn.; two-story garage, 20x31, $1500; to be erected at Pittsburg, Penn.

John A. Sears, 44 West Boylston street, Boston, Mass.; one-story garage, 80x50, to be erected at Worcester, Mass.

George Van Alstyne, B. & B. building, Rochester, N. Y.; two-story garage, 22x24.

A. J. Seibert, 587 Michigan avenue, Buffalo, N. Y.; one-story garage, 33x84, $6000.

Anton Charvat, 1801 South Ashland avenue, Chicago, Ill.; one-story garage, 22x20, $1500.

Standard Oil Company, Sioux City, Ia.; one-story garage, 32x148, $8500.

J. C. O'Brien, 22 Spring street, Springfield, O.; two-story garage, 50x150, $20,000.

Gem Garage, 402 North Salem street, Dayton, O.; one and two-story garage, 130x110, $30,000.

H. McCaffrey, Norwood, Penn.; two-story garage, 74x106; to be erected at Chester, Penn.

John Dalzell, Pittsburg, Penn.; five-story garage and repair shop, 50x72, $35,000.

L. Boyden, Quincy, Mass.; one-story garage, 22x32.

Herman Mutzgar, 230 Market street, Newark, N. J.; one-story garage, $8000.

J. P. Douglas, Westfield, N. Y.; two-story garage, 30x100.

Peter Germann, 2348 Fillmore avenue, Buffalo, N. Y.; one-story garage, 20x20.

Connelly Bros., 258-260 State street, Elmira, N. Y.; one-story automobile sales and storage rooms, 40x150, $10,000.

J. G. Buskett Cattaraugus, N. Y.; two-story garage, 31x85.

William P. Whitney, 122 South Michigan avenue, Chicago, Ill.; one-story garage, 50x150, $7500.

P. Bamberger, 514 East 62nd street, Chicago, Ill.; one-story garage, 21x23, $4000.

A. J. Fisher, 1950 Irving Park boulevard, Chicago, Ill.; two-story garage, 24x28.

Percy G. Williams, Islip, N. Y.; one-story garage, 25x49, $4000; to be erected at Brooklyn, N. Y.

CONTRACTS AWARDED.

John W. De Frehm, 4226 Sydenham street, Philadelphia, Penn.; one-story brick garage, 10x18, $350; for Dr. Nevenger, to be erected at southeast corner 21st and York streets.

Joseph Thurman & Co., 92 Collom street, Philadelphia, Penn.; one-story brick and stone garage, 14x18, $400; for John Senyard, to be erected on south side of Penn street.

Fred T. Buckins, Jr., 4510 Frankfort avenue, Philadelphia, Penn.; one-story brick garage, 21x48, $1400; to be erected at southwest corner of Kensington and Germantown avenues.

Anna H. Thomas, Philadelphia, Penn.; one-story brick garage, 110x71, $4250; to be erected on east side of 51st street.

C. E. Millard, Hoisington, Kan.; one-story garage, 50x100, for Pugh & Kelley.

Henry Beetz, 2668 Nebraska avenue, St. Louis, Mo.; one-story garage, 17x29, for J. Furrer.

Hattie Harray, Chicago, Ill.; one-story garage, $6500.

J. M. Hawxhurst, 1212 Judson avenue, Evanston, Ill.; one-story garage, 24x26, $1000.

Charles Nace, Merion, Penn.; one-story brick and stone garage, 18x20, $500; for John V. Ramsden, Philadelphia.

Charles H. Ball, 5514 North Third street, Philadelphia, Penn.; one-story stone and brick garage, 20x18, $400; for M. Lacock, to be erected at 5628-30 North Third street.

Walter Koch, Beaver Dam, Wis.; two-story garage, 20x100, $5000; for Martin Mohn.

T. Esbrornsen, 1700 North 60th street, Philadelphia, Penn.; one-story brick garage, 100x125; for William Wallace, to be erected at Girard avenue and Felton street.

J. M. Fuller, Cowley County Bank building, Winfield, Kan.; two-story garage, 80x140, $10,000; for M. F. Jarvis, 921 East Ninth street.

Henry Momberger, 24 West Chase street, Baltimore, Md.; one-story garage, 40x63, $20,000; for W. D. McLaughlin.

Wisconsin Construction Company, Chippewa Falls, Wis.; one-story garage, 60x120, $6000; for Barker Auto Company.

Schmidt Brothers Construction Company, 82 West Washington street, Chicago, Ill.; one-story garage, $1000; for J. B Verler, 1306 Newport avenue.

William Pritchard, Ithaca, N. Y.; one-story garage, 33x80; for James White, 111 East Green street.

M. W. Young, Philadelphia, Penn.; one-story brick garage, 19x23, $1800; for Frank Freeman, to be erected at 6419 Overbrook avenue.

GARAGES AND REPAIR SHOPS.

The Atlantic Tire and Rubber Company, Norfolk, Va., has erected a new and modern garage.

Christian A. Kinney, Colfax, Wis., is preparing to erect a large fireproof garage and repair shop. He has sold his present garage.

The Wigger Buggy and Harness Company, Marion, Ind., will erect a service station which will be well equipped. The company is agent for the Studebaker and Overland cars.

Charles F. Hanlon, San Francisco, Cal., is planning to ereot a three-story building at the corner of Bush street at an approximate cost of $25,000.

Hoyes & Moyer, Marion, O., has purchased a lot on East Center street and the company will erect a garage and salesrooms measuring 132 by 81 feet.

J. L. Shortell, Chicago, is erecting a commercial garage at 104 South Michigan avenue.

L. F. Berteau, Big Rapids, Mich., is erecting a garage on North Michigan avenue. It measures 50 by 100 feet.

O. W. Elliot, Mobile, Ala., is erecting a garage at the corner of Houston street.

Harry Compton, Grafton, W. Va., is erecting a garage on East Main street.

Otto Garlinghouse, Tecumseh, Mich., is erecting a garage on Evans street.

F. Monteith, Elk Rapids, Mich., is building a garage.

E. Kornblaum, Brooklyn, N. Y., is erecting a one-story garage at a cost of $5000 at 1325 46th street.

The Grinell Motor Company, Grinell, Ill., is erecting a garage at an approximate cost of $7000, 74 by 100 feet, in Main street.

The D. M. Connell Company, Fall River, Mass., is completing its garage on Durfee street. The company handles the Studebaker car and Sphinx cyclecars.

The Terminal Garage Company, San Francisco, Cal., is to erect a two-story brick garage at an approximate cost of $14,000.

Henry Hoffberger, Baltimore, Md., is erecting a two-story brick garage at 430 North High street.

The Metz Garage Company, Grand Rapids, Mich., will erect a new salesroom and garage, 43 by 148 feet, in Island street. It will be a two-story and basement structure. The company handles the Chevrolet car.

The Adams-Oakland Company, Cleveland, has leased the property at 3122 Euclid avenue and will erect a two-story sales room and garage. The company handles the Oakland car.

W. H. Barnes & Son, Seattle, Wash., is erecting a two-story concrete garage on Eighth avenue at a cost of $40,000. There will be no elevators, the basement and second floors being reached by sloping runways. Each floor will contain 14,400 square feet, there being a total of 43,200 square feet in the building.

W. H. Carter, Lancaster, Cal., is building a machine shop and garage.

Frederick H. Gleason, New York City, will erect a five-story garage at an estimated cost of $100,000 on East 56th street.

Howard Williamson, Luckey, O., is erecting a garage.

The Home Service Company, Philadelphia, will erect a one-story brick garage in North Broad street, 55 by 56 feet.

Frank Johnson, New London, Conn., is erecting a garage in School street.

The Columbia Garage, Southbridge, Mass., is erecting a steel and brick building.

Lesury Brothers, Fitchburg, Mass., has erected a garage.

Dennis F. Shannon, Pittsburg, Penn., has purchased land on Magee street and will erect a garage at a cost of $20,000. He is a member of the Shannan Transfer and Storage Company.

The Willow Club Garage, North Weymouth, Mass., has purchased property on Bridge street and will erect a garage.

F. C. Borel, Jr., Philadelphia, will erect a new one-story garage at a cost of $4000 at 5425 Summer street.

The Moerlein Brewing Company, Cincinnati, is erecting a one-story brick garage on Henry street at a cost of $17,000.

Digitized by Google

The Seaview Golf Club, Atlantic City, N. J., will erect a garage for the benefit of its members.

Harry Blackford, Findlay, O., is erecting a garage on South Main street.

P. Carney, Ilion, N. Y., of the Carney Garage Company, is erecting a garage in Main street.

The Automobile Company, Moundsville, Va., is building a garage at the corner of Seventh street. The company is agent for the Chevrolet car.

Barry Brothers, Danbury, Ia., will erect a modern brick garage, 44 by 95 feet.

Healy & Gavin, Olean, N. Y., has leased a store on North Union street and will convert it into a garage.

William D. McLaughlin, Baltimore, Md., is building a public garage in Charles street and Mt. Royal avenue. It will be one-story, 40 by 63 feet.

Anthony Lonk, Rochester, N. Y., is erecting a brick garage on Manhattan street at a cost of $15,000.

Frederick Fatzler, Newark, N. J., is erecting a garage and repair shop at 184 Badger avenue. It will be of fireproof construction and two stories. It will cost $20,000.

E. E. Caswell, Brockton, Mass., will erect a garage on Keith avenue.

ADDITIONS AND IMPROVEMENTS.

The Auto Inn and Exchange, Columbus, O., is being remodelled. The front of the building is being converted into a large sales room and a repair shop will occupy the rear. The company is located at High street and Sixth avenue.

The Morris Place Garage, Yonkers, N. Y., is having extensive improvements made to its garage on South Broadway. It is to be fireproof.

The Central Garage, Wheeling, W. Va., has remodelled its repair shop and will in future do all kinds of rebuilding and overhaul work. The company is at 1608 Wood street.

The Chattanooga Automobile Company, Chattanooga, Tenn., is enlarging its sales rooms.

The Toledo Tire and Supply Company, Toledo, O., is planning to enlarge its building, which is used for an automobile accessory and supply house. The company is at 241 Erie street.

The Louisville Transfer Company, Louisville, Ky., is planning to enlarge its business by erecting new buildings. The company is at Ninth and Green streets.

The Blackwood Tire Company, Nashville, Tenn., is enlarging its quarters at 916 Broadway. The storage room at 912 Broadway is being remodelled for the company's immediate use.

Jeup & Lindberg, Seattle, Wash., has enlarged its automobile repair shop.

The Perry Motor Supply Company, Hartford, Conn., has enlarged its store. The company carries a complete line of accessories and supplies.

R. D. Willard, Philadelphia, local manager of the Harry S. Houpt, Inc., has enlarged his quarters at 250 North Broad street. He handles the Mitchell line for that territory.

The Haskell Garage, Providence, R. I., at 21 Sackett street, is planning an addition to its garage, 40 by 67 feet and 20 by 30 feet, in the form of an ell.

The Messner Garage, Benton Harbor, Mich., is making improvements to its garage by adding a second story.

The Electrical Construction and Motor Company, Findlay, O., which recently established branches at Fostoria and Norwalk, is building a large addition to its garage at Findlay.

The Dundee Garage, Dundee, N. Y., is making extensive improvements. The company has razed the rear of the building and will replace it with a concrete fireproof construction, 42 by 90 feet. A repair shop 25 by 40 feet will also be built. John J. Murphy is the proprietor.

The Marshfield Hardware and Automobile Company, Marshfield, Wis., has added two stories to its garage.

L. L. Wetherell, Philadelphia, is making improvements to his garage at 4914 North Broad street.

The Wappinger Falls Garage, Wappinger Falls, N. Y., is making extensive improvements.

The Ollinger Motor Car Garage Company, Salina, Kan., is remodelling and enlarging its garage.

The Fuller-Ashley Company, Syracuse, N. Y., has completed an addition to its garage at 119 West Taylor street, to be used for a paint and repair shop. The company now has a floor space of 10,000 square feet.

The Webster City Automobile Company, Webster City, Ia., is having extensive improvements made to its building in East Second street.

The Albany Garage Company, Schenectady, N. Y., is enlarging its sales rooms at 740 State street. Raymond F. Rifees is general manager.

Duncan Welsh, New Middleton, O., has leased the Maccadee hall and will remodel it for a garage.

The Electric and Auto Company, Lorain, O., which conducts a garage and sales agency, has bought a lot in the rear of its garage on which a storage building will be erected.

O. L. Linn and R. S. Scott, Marshall, Mich., have leased the Brewer building and will convert it into a show room. Briscoe and Argo cars are sold. The company is in North Eagle street.

Toonen-Barlament-Wright Company, DePere, Wis., is now occupying an addition to its garage.

The Grand Motor Car Company, St. Louis, Mo., is having its sales rooms at 1617-19 Jefferson avenue remodelled. The company has the agency for Auburn cars.

The Koehler Garage, Marshfield, Wis., has completed its alterations and improvements.

The Haney-Gasper-White Company, Algoma, Wis., has erected a large addition to its garage, which will be a repair shop

The Electrical Construction and Motor Company, Findlay, O., will erect a large addition to its garage. The company has branches at Fostoria and Norwalk.

The City Garage, Onaway, Mich., is being remodelled.

The Enterprise Garage, New Brunswick, N. J., is making extensive improvements to its show room. Ford and Studebaker cars are handled.

The South Side Motor Station, Cedar Rapids, Ia., is enlarging its garage. The latest type of machinery will be installed.

Bryant Brothers, Centerville, Ia., is to erect an addition to its garage in 14th street.

R. L. Collopy, Philadelphia, is making extensive improvements to his garage at 427 Queens lane.

The Trist Auto Company, Pocatello, Ida., is enlarging its garage on West Center street.

John Lawrenson, Westbrook, Me., is enlarging his garage.

The Winton Motor Car Company, St. Paul, Minn., has enlarged its quarters at 208 West Fifth street by taking over the entire building.

D. E. Snider, Middletown, O., has purchased property in Wall street and will erect a garage. He represents the Ford cars.

J. Ariman, New York City, will erect a garage at 425 East 80th street at a cost of approximately $20,000.

The Matthews Garage Company, Mobile, Ala., is erecting a garage in 24th avenue.

W. P. Hagy & Son, East Graham, W. Va., is building a garage and carriage shop in Wister street.

R. B. Jean, Shelbyville, Tenn., has purchased property in Depot street and will erect a garage and automobile repair shop

Kissner & Husted, Nellie, O., is to build a three-story brick garage in Main street. Ford and Overland cars are represented.

G. W. Rodehaver, Berkeley, Cal., is building a garage in Berkley way, near Shattuck avenue, at a cost of $10,000.

Harvey Perkins, Moundsville, W. Va., is erecting a garage

John Coultas, St. Louis, Mo., is to erect a one-story modern garage at 6131 Delmar boulevard. It will cost $10,000.

Alfred Yates, Ayer, Mass., contemplates the erection of a garage in Maple stret. He will carry a full line of automobile supplies.

MISCELLANEOUS.

The Toledo Central Garage, Toledo, has leased for 10 years a four-story and basement building at 232 Huron street. It will be remodelled and equipped with modern machinery and improvements for a day and night garage, which will have accommodations for 300 cars.

The Boone-Buick Auto Company, Boone, Ia., is erecting a building in Sixth street.

The Clift Motor Company, Bellingham, Wash., is erecting a building on Central avenue.

The Auto Supply Company, Chattanooga, Tenn., is erecting a building in which the latest vulcanizing equipment will be installed. The company will handle the Smith and Red Tred Fisk tires.

The Duval Motor Supply Company, Hutchinson, Kan., is erecting a brick building in East Sherman street.

The Lombard Works and Supply Company, Augusta, Ga will erect a large assembly plant for automobiles in Kollock street.

The Kelly-Springfield Tire and Rubber Company, Wichita, Kan., is erecting a fireproof building in South Lawrence avenue. It will cost approximately $6000.

The Winton Motor Car Company, Detroit, Mich., is erecting a sales room in Woodward avenue. The building will be two stories, 71 by 212 feet.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

Automobiles, Motors and Accessories. No. 15,214—The commercial agent of the bureau of foreign and domestic commerce in New York City reports that he has been advised that a representative of a large firm in Norway has sailed for the United States for the purpose of establishing commercial relations with American manufacturers and exporters of automobiles, motors and accessories. The name and address of the representative may be had on application to the bureau of foreign and domestic commerce, or its branch offices.

Electrical Appliances, Rubber Goods for Automobiles, Etc. No. 15,243—A firm in South America has informed an American consul that it desires to import electrical appliances in general, telephone and telegraph supplies, rubber goods for automobiles, pharmacies and industrial purposes. Correspondence should be in Spanish.

Automobiles and Trucks. No. 15,385—An American consular officer in Central America reports a possible market for automobiles or motor trucks. He transmits the names and addresses of two business firms in his district which may be in the market for motor trucks.

Automobile Accessories. No. 15,442—The bureau of foreign and domestic commerce has received a letter from a firm in the United States stating that one of its customers in South America desires to receive propositions from manufacturers of all accessories for automobiles and, in general, tools and water proof canvass. Prices and terms of sale, together with samples, should be sent at once.

Automobiles, Auto Trucks and Lighting Fixtures. No. 15,580—A business man in southern Europe has informed an American consul that he wishes to import automobiles, auto trucks and lighting fixtures. Catalogues and correspondence should be in Spanish.

Aviation Motors. No. 15,599—An American consular officer in one of the neutral European countries has requested catalogues, names and addresses of manufacturers of aviation motors and accessories.

Motor Cars and Motorcycle Accessories. No. 15,674—The bureau of foreign and domestic commerce is in receipt of a letter from a business man in Italy stating that he desires to secure agencies for the exclusive sale in Italy of motor car and motorcycle accessories.

Rubber Tires. No. 15,696—A business man in Denmark informs an American consul that he is in the market for large quantities of rubber tires suitable for automobiles and bicycles. Correspondence may be in English.

Machinery. No. 15,727—An American consular officer in Italy reports that a business man in his district desires to be put in communication with firms manufacturing machinery for making automobiles and machines for making springs.

Motorcycles. No. 15,735—An American consular officer in Portugal states that a firm in his district wishes to represent an American-made motorcycle which is not now represented in the markets of that country. Correspondence should be in French or Portuguese.

Gasoline, Grease, Paints and Varnishes. No. 15,761—A firm of commission merchants in New York informs the bureau of foreign and domestic commerce that its agent in Europe wishes to communicate with American manufacturers and exporters of gasoline, grease, paints and varnishes.

Cheap Motor Cars and Motorcycles. No. 15,805—An American consular officer in Spain reports that a merchant in his district wishes to import cheap motor cars and motorcycles. It is desired to secure cars valued at less than $1000 each. Correspondence, literature, etc., should be in Spanish.

GENERAL MATERIAL MARKET QUOTATIONS.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period for purposes of comparison. Antimony continues to rise, showing an advance of three cents for this month, while last month it rose 4½ cents. Southern iron dropped 25 cents on the ton and northern also dropped 50 cents. Bessemer steel showed a decline, having fallen 50 cents on the ton. Electrolytic copper advanced 15 cents a hundred pounds, as did lead at the same rate. Tin soared high, leaving the mark of $36.25 for the previous month to $51.00 for this month, a gain of $14.75 on a hundred pounds. Oils are fairly steady, cottonseed dropping 35 cents on the barrel. Rubber continues at the same figure.

QUOTATIONS ON AUTOMOBILE SECURITIES.

The condition of the stock market as applying to automobile securities during the past month, is indicated by the tabulation below, which shows the high marks reached by the several stocks listed each week. For the most part the market has been fairly steady, although some securities showed marked gains and others declined somewhat.

PRACTICAL SHOP AND GARAGE ACCOUNTING.

Two Series of Simple Forms, Easily Kept, Which Will Provide Positive Authorization of Work, Obviate Error or Uncertainty, Insure Against Loss of Time or Materials—Economies That Are Worth While.

REASONABLE profit must be made by any business to justify its continuance. Theoretically, at least, the same ratio of profit ought to be realized from every transaction, although this is hardly practical because of varying conditions. When a garage or station affords service a stated rate is usually established for each classification of vehicle, and supplies are furnished at the prevailing market prices, though in some instances discounts are allowed continuous customers, which are believed desirable to attract the patronage of those who might otherwise be casual purchasers. When accessories and equipment are dealt in these are sold so as to produce a sufficient return to warrant this department, and no man can afford to sell for less than what will insure him a fair margin.

Fig. 1—Order Form, on Which the Owner of a Car Authorizes the Work to Be Done Upon His Car.

Service stations and repair shops, which do adjusting and restoration, whether small or large undertakings, must be equally certain of profit, but as they deal principally in labor and material the time of the workers and the stock must be carefully economized. There can be no certain excess of revenue over operating expense unless there is accurate knowledge of labor required for a given work and the exact material that is necessary. Waste of time and stock is certain. That is, there will be some loss because of circumstances that cannot be controlled, but this can be minimized by a system of records, not necessarily complicated, but sufficiently complete to accurately account for either factor.

No business man should under-estimate the value of accounting. The better the organization the larger will be the saving. Large enterprises are willing to pay well for the inauguration of comprehensive systems and for their maintenance, and nothing better demonstrates the value of record than the fact that in every instance material saving has been accomplished. But the concern doing a limited business usually desires to economize carefully at minimum cost, and the purpose of this article is to describe what will afford a positive record with the least clerical work and prevent leakages that will represent a considerable amount of money in a year.

Simplified Records Are Necessary.

Simplified forms are absolutely necessary, and a series of three can be made to serve for practically all the requirements in the shop or station of small proportions. These do not relate to the regular service of the station where machines are stored and cared for, nor to the sale of accessories, equipment or supplies, save where the last are used in connection with repair work, but are designed principally to cover labor and material. The form illustrated at Fig. 1 serves the dual purpose of a shop order and office record, being made out in duplicate. As will be noted the form will include considerable data when filled.

Assuming an instance of its use: A car is brought to the station for an overhauling, and the customer is dealt with by the manager or foreman, who learns the extent of the work required. The shop order is made out, each order being given a serial job number that is carried through the record. In connection with this, when a car is received the owner or driver should be required to remove from it all the unattached equipment, such as tools, robes, pumps, jacks, etc., make note of it if the property is to be stored by the repairer, and the equipment should be checked in duplicate and a copy given the owner, so that there will be certainty of responsibil-

Description of Stock	Quantity

Fig. 3—Requisition, Which Must Be Filled and Sent to the Stock Room for Material for Repairs.

ity in the event of a claim made for loss.

As the order is filled the notations include the date, the time, the make, type or model designation, the manufacturer's number of the car, the registration number and the owner's name and address. Under the heading of "Repairs Necessary" are entered the instructions given by the owner or driver, or the adjustments and restorations that are needed in the opinion of the mechanic or foreman who makes the tests and the inspection. Few shops or stations will undertake a guaranteed overhaul at a stated price, unless it is sufficient to justify—that is, insure to the owner a thorough job, because of the possibility of finding unexpected damage that must be repaired, possibly at a loss. Practically all work is taken on a basis of labor and stock, the workmen being expected to do first-class work and to use specified material, or at least of standard qualities. The original, bearing the signature of the person giving the order, is sent to the office, and the copy is attached to the machine, this being generally the instruction for the workmen. The copy ought to be a stout tag that will endure handling and can be so secured that it cannot be lost. When the work is completed the date and time are entered on the original and when the car is delivered the date and time are again noted, or if a charge, this fact is included.

Details of the Time Card.

The record of the time of the workmen engaged on the job is very important. Each man working on the car is given a time card on which is first entered the number of the job. This form is illustrated at Fig. 2. The entries show the date, the name of the employee, the check number for the tool room, and on the card is also shown the character of the work done and the time so engaged. No card is used for more than one job, or more than one day. New cards are made out each day so long as the mechanics are employed on the job, so that a man's time might be represented on one or a series of cards, each of which will show the detail of what has been done a given date. All time cards are collected each day and sent to the office.

Examination of the cards will account for the entire time of each man, and any delay can be determined and investigated if needs be. The purpose of the shop should be to have the work done in the least time compatible, because of the necessity of minimizing the expense to the owner, and the shop should be paid for all time legitimately put in on the car, that there should be no loss on labor. By comparison of the time of different workmen on similar work the office can learn if the men are working earnestly or are shirking, and the cards can be used too for reference in many ways. These should be filed under the job serial number, which will keep each series together and always available.

The Stock Requisition.

The third form of this system is a stock requisition, for all material and supplies should be kept apart from those who have access to the shop, and when anything is required for use in connection with a repair a requisition should be made out, such as illustrated at Fig. 3. The issuance of the requisition will account for the stock, which is a necessary office information, and identification with a job will insure that it will be charged and paid for. Leakages through neglect of stock room record are frequent, and this is a direct loss to the shop, while any overcharge for material is an imposition on the customer, so that the requisition is a safeguard for both interests. In filling this the workman enters the job number, the date and his name, and the materials and the quantity under the respective headings "Kind of Stock" and "Quantity". In entering these against the stock account or in a card inventory, the stock room can be kept up to the standard that is necessary to meet the requirements of the business. Failure to maintain the stock will entail delays and cause

expense—results that are entirely unnecessary.

In the event of charge accounts statements are made to each customer at the end of the month, and the items are made up from the time cards and stock requisitions. The form of day book is shown at Fig. 4, which is a loose leaf type, the accounts being made in duplicate and the copies being sent to the customers. When an account is paid entry is made on the day book and the copy is receipted. When an account is closed the leaves are removed from the binder and are filed alphabetically.

When payments are made in cash, entries are made in the cash book, which is illustrated at Fig. 5, these including the dates, the customers' names and the amounts received, each in the debit column or under the designation of debits,

and the expenditures are entered in the credit column, or under the designation of credits, and from this book the debits and credits are made to each account. Nominally the difference between the columns of the cash book, added to or deducted from the bank balance, will indicate the cash on hand.

The system described will meet the requirements of a station or shop of considerable proportions, but the needs of the exclusive repair shop are perhaps not as great, and these can be practically met by a series of three record forms, which are principally kept by the foreman. The first of these is the work order, which is shown at Fig. 6, this being made out in duplicate by the foreman. On this is entered the date, the name and address of the owner, a description of the car, when the work is to be ready for delivery, and the details of the order. The instructions as to the work to be done are required of the owner, who signs them as his authorization. The original of the order is kept for the office, and the copy, on a substantial card, is attached to the car. On this order is placed the job number, which is carried on the other two forms used. With a shop of this kind the expectation is that the machines will be worked on in the order received, so that the jobs will be turned out as nearly as is possible at the time promised.

In connection with this a time card is used, which is shown at Fig. 7, on which is entered the job number, but these are made in duplicate, the original being sent to the office and the copy being retained by the foreman, who with them makes out the time of the men for the pay roll. If desired, the time can be kept with one card, the office keeping these and from them making up the charges for the bills as well as the pay roll.

The third form is seen at Fig. 8, which is an office delivery record, which is made out by the foreman of the shop and sent to the office with the work order when the job has been completed, this being notification to the office that the machine is ready for the owner. The date and time the notice is received in the office is noted, and the foreman has no further responsibility for the job. Notice is sent the owner of the readiness of the machine. When the car is delivered to the owner he signs for it, accepting the work as satisfactory. As the record is made in duplicate the foreman has full information relative to the work and the original is retained in the office.

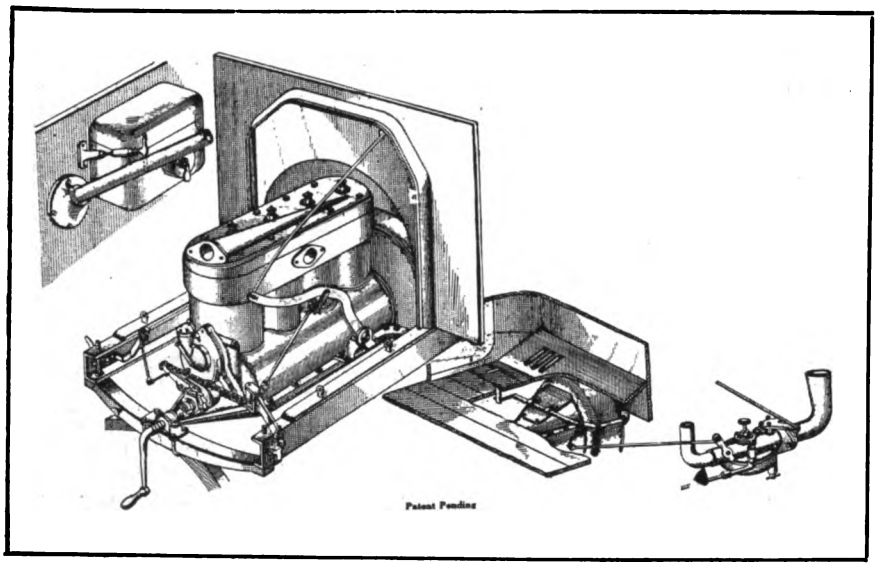
HUNTER FORD CAR STARTER.

Chicago Company Offers Dealers a Much Desired Equipment to Sell at Popular Price.

The Hunter Auto Supply Company, 333 W. Madison street, Chicago, Ill., is selling the Hunter starter for Ford cars for $10. This, the company claims, is an extremely practical mechanical device that can be operated from the seat by a woman or child. The efficiency of the starter and the price are very potent reasons why dealers should profit largely through agencies. The Hunter starter can be installed in any Ford car in an hour's time. The accompanying illustration shows the simplicity of operation. Starting is effected by drawing a handle from the dash toward the seat, then releasing it to be drawn back by spring pressure. The starting crank is retained. The apparatus is located under the hood, with the exception of the starting handle, which is on the dash. Dealers who are interested can obtain from the company at the above address full details of the agency contract it is making with dealers.

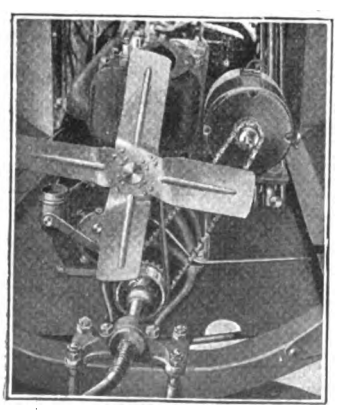


The Hunter Starter, Made Exclusively for Ford Cars.

NEW-LITE LIGHTING SYSTEM.

Newton, Ia., Concern Has Attractive Offer for Dealers in High-Grade Equipment.

The New Lite Manufacturing Company, Newton, Ia., is building a lighting equipment adopted to all types of cars and which is sold for prices that are very atractive to owners. This company's production includes electric lighting, ignition and signaling devices, which can be installed on Ford, Overland, Hudson, Regal and many other cars. The New-Lite dynamo is a slow speed type, with the armature rotating on high-grade ball bearings, and the drive is taken by silent chain from a special sprocket on the crankshaft of the engine. When attached this sprocket does not interfere with manually cranking the motor, and installation can be easily made by the owner. The lighting equipment is complete and includes a cut-out switch, storage battery, lamps and all accessories necessary for installation.



New-Lite Dynamo on Ford Car.

AUTO PARTS CHANGES.

The Auto Parts Company, Chicago, Ill., announces that Walter J. Costello and John T. Hart have been taken into its organization. Mr. Costello is well known on Chicago's automobile row, and Mr. Hart, general manager of the Auto Parts Company, is well known to automobile men throughout the entire Middle West.

LONDON FORD CHASSIS BODIES.

Full Line of Standard Types Produced to Meet Requirements for Light Delivery Service.

The London Auto Supply Company, 2540 Wabash avenue, Chicago, Ill., is manufacturing a large number of standard types of bodies that are adapted for installation on Ford chassis for delivery purposes. The bodies are carefully designed, are made to be interchangeable with any Ford chassis, and are constructed of the best materials obtainable. The bodies are built to meet the requirements of all business men who require fast, light delivery equipment, and so made as to endure hard service, having hard wood frames, rolled steel panels, which are packed with felt to prevent rattle, all the joints are strongly braced with steel brackets and the windows are polished plate glass. When desired they are finished in any color or with desired decoration, or can be supplied in the lead.

Dealers who sell the London bodies can supply any demand for high-grade Ford chassis equipment without investment, making sales from catalogues and having the deliveries made direct from the factory. The bodies are shipped with all requirements for installation, and are sold with the fullest guarantee. Full information relative to its agency propositon will be sent by the company at request. From the detailed specifications the dealer will receive from the London Auto Supply Company he will see that these bodies can be used for every conceivable purpose. The list is complete in every detail.

STREAMLINE HOOD FOR FORDS.

The Superior Lamp Manufacturing Company Building a New Hood That Improves Appearance of Car.

The Superior Lamp Manufacturing Company, 136 West 52nd street, New York City, is building a new Ford specialty in form of a streamline hood. This equipment adds materially to the appearance of a Ford car and the effect is to much change it from every point of view The Superior streamline hood is made of heavy 16-gauge pressed steel and has six ventilator gills on each side. The construction is solid and substantial, and the manufacturer states it cannot rattle or creak. The top is free of hinges, and the design is such that it effectually prevents rain or water from reaching the motor or the electric wiring. The Superior Company has an exceptionally attractive proposition for dealers to sell this hood and will at request send a detailed statement of its special dealers' proposition.

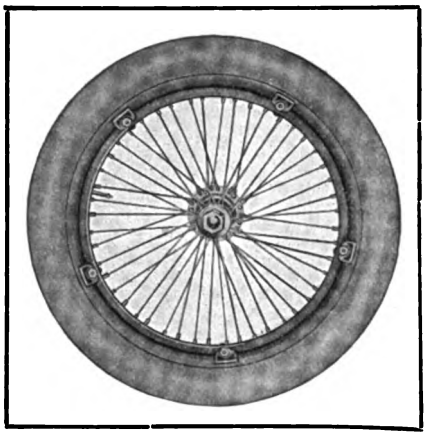
MOTT WIRE WHEELS FOR FORDS.

Utica Company Has Excellent Proposition for Dealers Who Want a Quick Selling Specialty.

The Mott Wheel Works, Utica, N. Y., manufacturer of Mott wire wheels with demountable rims for Ford cars, is making an exceptionally interesting proposition to dealers. This equipment retails for $35 for a set of four wheels and five rims. The Mott wheels may be mounted on a Ford car in a very short time. The change can be made by any owner. Mott wheels are carefully designed, built of high-grade stock and are fully guaranteed against defective material and faulty workmanship. The company will replace free of charge any wheel or part which develops defects within one year from date of purchase. A request to the company at its Utica address will bring full information regarding the company's agency contract.



Mott Wire Wheel for Ford Cars.

FORD SPECIALTIES DIRECTORY.

Publisher of This Book Will Send a Copy to Ford Dealer Gratis—When Request Is Made.

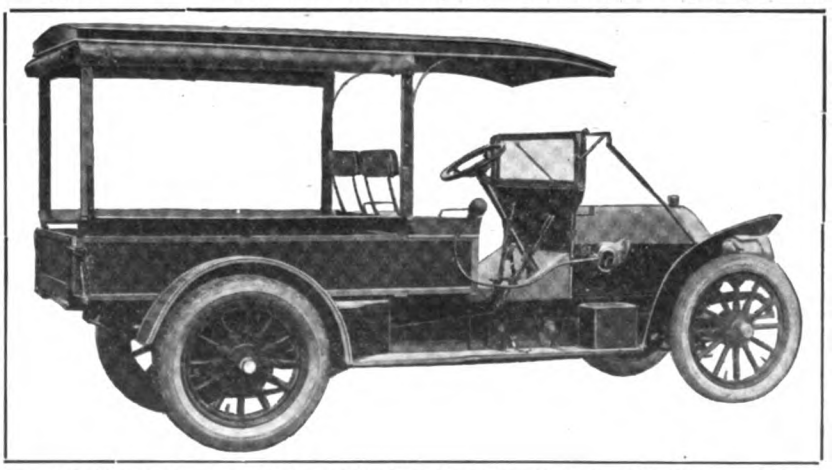
The Automobile Trade Directory, 243-249 W. 39th street, New York City, is to issue a directory of Ford specialties, which will be complete and authentic in every detail. The company states that it will be on a par with the service that has made the Automobile Trade Directory the standard buyers' reference of the American automobile industry. A copy of this directory will be presented to every Ford dealer in the country with the compliments of the publisher. It will be ready April 20, and will be extremely valuable to any Ford dealer. All that is necessary to obtain it is a request written on firm's letter head or business card.

HIGHLAND COMMERCIAL BODIES.

Dealers Are Offered Large Field in Handling Product of the Cincinnati Company.

The sales policy of the Highland Body Manufacturing Company, Station P, Cincinnati, O., afford any Ford or other car dealer an exceptional opportunity to sell commercial bodies for Ford chassis. As an agent for this company the dealer need not make an investment or carry stock. Immediate deliveries are made by the company from its factory stock of standard types, it being one of the largest body building companies in America. The Highland Ford car commercial bodies are interchangeable with any Ford chassis, and can be supplied with special fittings for any service. The company also builds standard type bodies for Overland, Buick and practically all other makes and models of machines.

Highland bodies are built in all types, enclosed and open, to meet the demands of any service. They are designed to have great endurance, are constructed of highest grade materials, and in appearance and finish are equal to the best special work. In connection with such agencies the Highland coupe top for Ford cars can be sold. This top can be attached to a Ford roadster in 50 minutes, and has been sold in large numbers. The all-the-year-round use of Ford cars in nearly every climate has necessitated protection for the driver in cold and stormy weather, which can be provided by the Highland coupe top. The top is handsomely finished. It can be installed by any owner and is interchangeable with any Ford chassis. Automobile dealers and garage managers, who are seeking an agency that promises large profits, wihout investing capital, can obtain details of the agency proposition by addressing the company, and by asking for catalogue 15 A, which gives specifications of the Ford bodies.

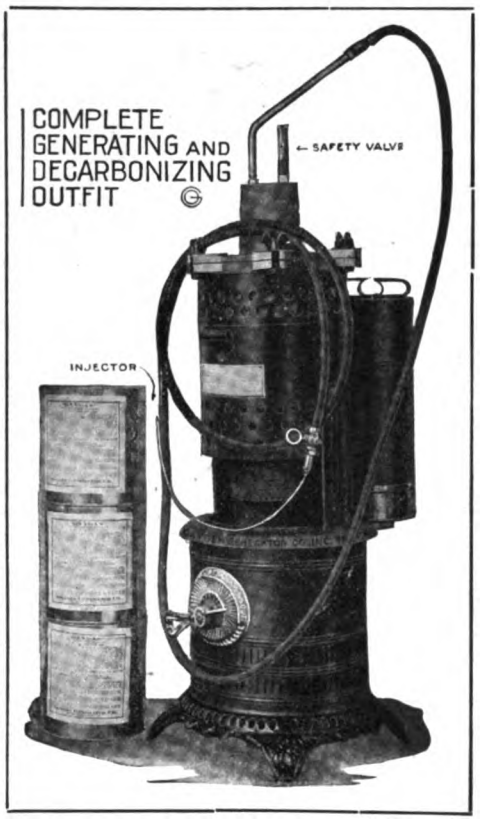


A Highland Express Body with Standing Top Fitted with Side and End Curtains.

TWO QUICK SELLING ACCESSORIES.

The Oxygen Generator Company Producing Generating and Decarbonizing Outfit and O. G. Shock Absorber.

The Oxygen Generator Company, Inc., 301 River street, Troy, N. Y., is manufacturing a complete generating and decarbonizing outfit that is specially desirable for vehicle owners and garage men. This outfit, as may be seen in an accompanying illustration, generates oxygen. By putting one four-pound can of oxygas in the generator and lighting the burner, enough oxygen can be generated in three or four minutes to clean four heavily carbonized cylinders. The apparatus is 2½ feet high and 9½ inches in diameter and is made of heavy cast iron. It will hold oxygen gas for weeks, is made exceptionally heavy and having a safety valve it cannot explode. The O. G. shock absorber has an extreme spring action and absorbs both shock and the rebound. The generating and decarbonizing outfit is sold for $15 complete, this including three four-pound cans of oxygas. The O. G. shock absorbers are offered for $5 for the set of two or $9 for the set of four. The company will state the details of prices and discounts and will supply literature at request. These shock absorbers are sold with a guarantee that covers workmanship, material, finish and satisfactory service during the use of the car. The company will refund immediately if the O-G shock absorbers do not prove satisfactory.



The O. G. Oxygen Generating and Decarbonizing Outfit.

The Pacific Tire and Rubber Company, Seattle, Wash., has established sales rooms and offices at 604 East Pike street. The company is distributor for the Batavia tire in Washington, Oregon, Idaho, Montana and British Columbia.

Grable-Young & Co., San Diego, Cal., has opened a store at 1186 Sixth street. The company handles the Pennsylvania tire for that territory.

The Sleepy Eye Automobile Company, Sleepy Eye, Minn., has been formed by J. J. Grimes and N. C. Hoffman to conduct an automobile repair business and store cars. The company has leased the Wolldrik garage in Fifth street. Leslie Steinmetz will have charge of repair work.

The Automobile Supply Company, Tacoma, Wash., has secured the agency for Silvertown, Diamond and Goodrich tires.

The Minkler Company, Great Barrington, Mass., has engaged in the automobile business and will erect an up-to-date garage.

Ralph De Witt, Columbus, O., is representing the Midgely tires for that territory. His headquarters are at 414 Columbus Savings and Trust building.

The E. J. Todd Rubber Company, Hartford, Conn., has opened a new store in Trumbull street, just opposite its former location.

Elmer Grady, Washington, D. C., has opened an office at 1620 L street northwest and will distribute the Quaker tire. J. B Harris is also interested.

The Great Eastern Rubber Company, Allentown, Penn., has opened sales rooms at 1027 Hamilton street and will carry a complete line of automobile accessories and supplies.

D. O. Hinckle, Columbus, O., formerly with Jones, Witter & Co., now has an active interest in the Hinckle Tire and Rubber Company, 186 East Gay street. The company is local agent for the Mohawk tire.

The Central Automobile Company, Scranton, Penn., will open a sales room and garage at 526 Spruce street. The company will handle the Kissel pleasure cars and trucks and Jackson car. A complete line of accessories, oil, tires, etc., will be stocked.

The Inter-State Auto Company, Duluth, Minn., has opened attractive sales rooms at 8 West First street. The company handles the KisselKar, Franklin and King cars.

Phil Kennard, Tampa, Fla., has opened a motorcycle shop and has also purchased the interest of H. Olen Fielding in Kennard, Field & Co. Mr. Kennard will continue to represent the Thor and Harley-Davidson motorcycles and will also maintain the sales room and shop at 1506 Franklin street.

The McGraw Tire and Rubber Company, Boston, Mass., has opened a branch at 667 Boylston street, in charge of Wallace G. Page. The company manufactures, at its plant in East Palestine, O., the well known Imperial, Pullman and Congress tires, as well as the McGraw solid tires.

Howard W. Martz, Indianapolis, Ind., formerly distributor of Maxwell cars, with headquarters in North Capitol avenue, will hereafter handle the Briscoe car, instead of the Maxwell, at 646 North Meridian street. The concern is known as the Martz Company.

The Motor Tire Supply Company, Buffalo, N. Y., has opened a store at 827 Main street. This company is a branch of the Tire Sales Company and will handle, both wholesale and retail, factory "seconds" tires, as well as low-priced guaranteed tires.

The Chew Goucher Company, Washington, D. C., has been appointed agent in that district and for the State of Maryland for the Savidge steering device for automobiles.

Schunk & Proctor, Columbus, Wis., is the name of a company formed by J. E. Schunk and F. C. Proctor to handle Ford cars in that territory.

The Reo Motor Sales Company, Canton, O., has opened sales rooms at 130 Fourth street.

Charles A. Robinson, Boston, Mass., has opened sales rooms at 893 Boylston street, where he will handle the Regal car. He was for a long time associated with the Packard agency in that city.

The Harrison-Miller Auto Company, Hampton, Ia., has been organized to conduct a sales agency in the M. C. Hicks building in Fourth street. The company handles the Buick and Ford cars and a full line of accessories.

The Lowe Rubber Company, Phoenix, Ariz., has opened a store at 308 North Central avenue. The company handles the Kelly-Springfield tires for that territory.

Fred W. Dart, Hartford, Conn., has taken over the agency of the Rayfield carburetor and has installed a complete line of carburetors and parts in a store at 348 Trumbull street.

Plath & Reineke, Fargo, N. D., is a concern organized to handle the Imp cyclecar.

The Charter Oak Auto Company, New Britain, Conn., has opened a branch in that city. Fred W. Lycett is manager. Hupmobiles and Dodge cars are handled.

The Nelson Auto Sales Company, Perry, Ia., has been formed by W. O. Nelson and R. B. Mitchell to sell Dodge and Reo cars.

Harrie Starkie, Hartford, Conn., has begun an automobile business at the sales rooms of the Palace Automobile Service Company in Trumbull street, handling Chevrolet cars.

The Kenton Motor Company, Louisville, Ky., has opened a branch at 437 South Second street. The company is agent for the Allen car.

The Monarch Motor Sales Company, Columbus, O., has opened sales rooms for the Monarch car at 246 North Fourth street.

Frank A. Craft, Aberdeen, S. D., has rented offices in the Gilbourne building in South Lincoln street. The Maxwell car is represented.

Kehoe & Cady, Albany, N. Y., distributor of the Maxwell car, has opened show rooms and a service station at 1022 Central avenue.

W. Taylor, Philadelphia, recently appointed wholesale distributor of the Apperson car in eastern Pennsylvania, southern New Jersey, Delaware and Maryland, has established head quarters in the Abbott building, at Broad and Race streets.

Walter W. Woods, Marietta, O., has leased rooms in the Wells block and will handle the Ford and Dodge cars.

The Aiken Lamp Company, Marlboro, Mass., will handle the automobile lamp, the patent of Herrick Aiken, manufactured by a firm in Boston.

The Ellison Motor Supply Company, Haverhill, Mass., has completed a sales room and service station and will handle Ford cars. The building is two-story, of brick, and fireproof construction, 40 by 80 feet.

The Steninger-MacDowell Rubber Company, Colorado Springs, Col., has dissolved partnership.

Fred G. Lee, Chicago, formerly with the Class Journal Company, has entered the tire accessory business at 4703 Sheridan road.

The Stitt Motor Company, Hastings, Neb., has opened an attractive automobile accessory sales room and a garage.

The Naylor-Clark Automobile Company, Provo, Utah, has engaged in a general automobile business. The company is capitalized at $25,000.

The North Side Auto Company, Indianapolis, has been taken over by Alfred Johnson and Anthony, who will conduct a garage and repair shop at 1821 Washington avenue.

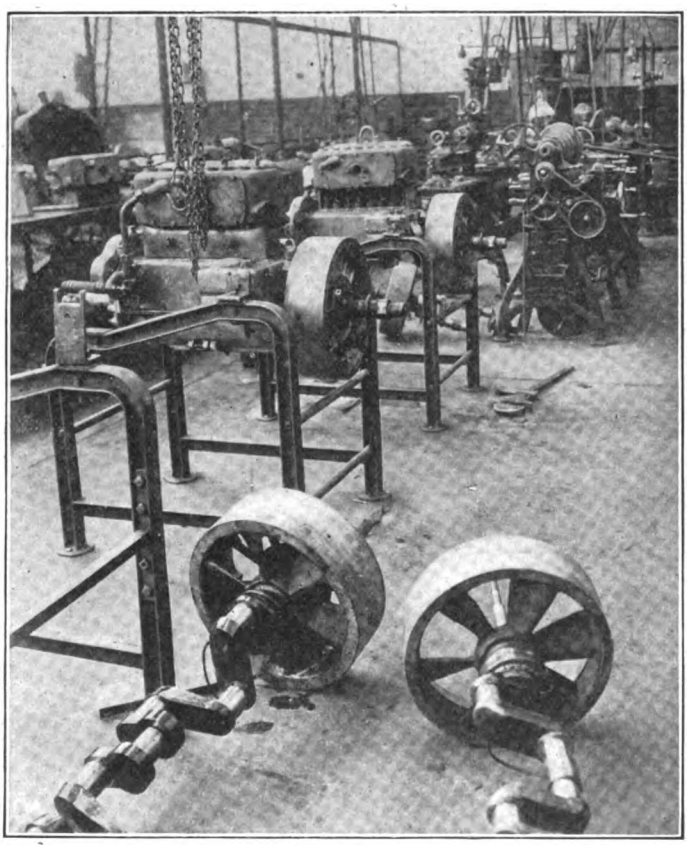
HOW WHITE COMPANY SERVES OWNERS.

It Encourages Garage Men to Maintain Factory Standards in Repairing Its Machines, and Maintains High-Class Service Stations.

THE manufacturer of pleasure and commercial motor vehicles cannot reasonably be expected to maintain or practically insure the continued operation of his cars, beyond his warranty of construction and materials. The vehicle builder will not undertake more than is guaranteed, but many have business policies that insure to the owners consistent supervision and the best of facilities for maintenance and repair at fair prices.

Many large builders have established service stations in commercial centres where overhauling, repairing and replacing of parts can be done expeditiously and at an economical cost, and some are encouraging specialization in upkeep and repairs of the machines they build in garages and repair shops. They demonstrate to garage men the value of having men who are especially trained in work on their vehicles, this insuring patronage and increased business. The stated purpose is to raise the standards of repairs, etc., to equal those obtaining in their factories.



View Showing Equipment of Motor Department, and Parts in Process of Repair.

In their own service stations specialization goes even further. The force of workers is so selected as to include men who are experts in repairing or adjusting the components of the machines, and the work is so systematized that the owner is certain of high-class and satisfactory repairs at the lowest practical cost for labor. In addition the stations are well stocked with parts, that no time need be lost by waiting for a necessary component to arrive from the distant factory.

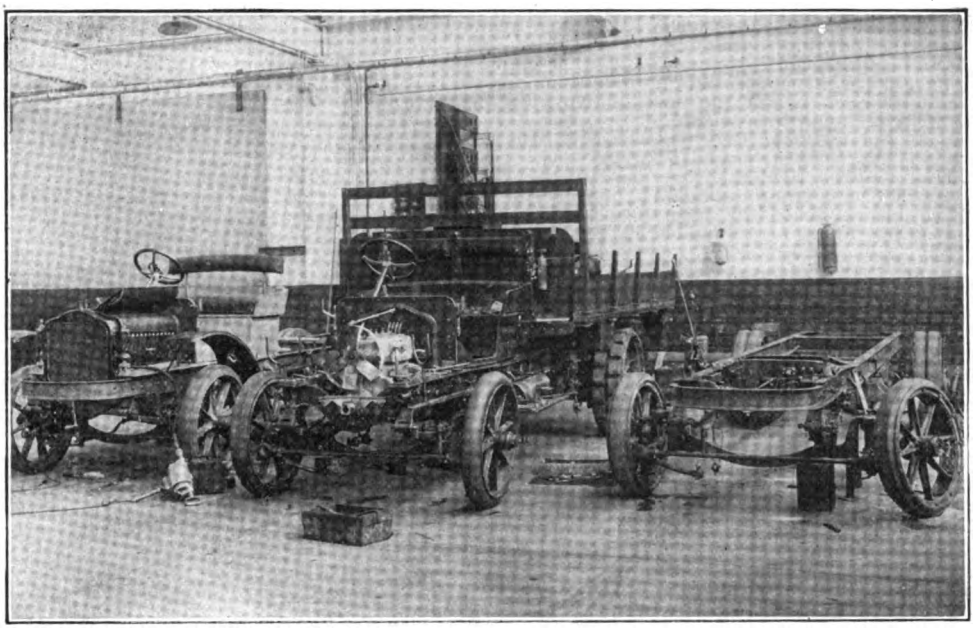
The service of the White Company, builder of pleasure and commercial motor vehicles, is unusually well organized. In addition to a campaign to have White specialties in garages and repair shops, it has splendidly equipped service stations in many parts of the country. But the company believes that the owners and operators of White cars can best be served by local garages and repair shops. The company co-operates with these shops in every practical way. A corps of experts is ready to answer any question applying to a White machine, while workmen will even be supplied when a complicated job requires their services. Parts are sold to the garage and repair men at wholesale prices. The company is prepared to go to what is some times considered an extreme to bring the standard of work up to the high standard it has set and maintains in its factory.

The manufacturer of pleasure cars and motor trucks views service as a matter of supreme importance, considering it a business policy that must be well defined and consistently followed to derive the best results from it. Service to the car owner means adequate facilities for car repair, with complete stock of parts, etc., under the most competent of expert supervision, insuring maintenance at minimum expense. It is along these lines that the White Company conducts its service stations and agencies, which are situated in numerous commercial centres for the convenience of owners. Its policy also extends beyond its own agencies, by encouraging garage and repair men to specialize in adjusting and repair work upon White machines. The following description of a White service station is typical:

What is regarded by the company as the finest establishment of its kind in New England is the White service station at Brookline, Mass., at Commonwealth avenue and Pleasant street. The building, shaped like a T, made as fireproof as modern science permits, is single-story of the saw tooth type, made of brick, cement, stone, steel and metal, and covers about an acre. The sales rooms and offices face Commonwealth avenue, and the service building ranges along Pleasant street for a block. In the latter building are a pleasure car garage, repair department and two sections devoted to the storage of new cars and trucks.

One construction feature that makes for time and labor saving is that there is only one floor, thus elim-

Digitized by Google



Section of Workshop Showing Trucks in Various Stages of Overhauling and Repair; Electric Drill at the Left.

inating the necessity for elevators, etc. Careful provisions for lighting, heating and ventilation were installed for higher efficiency. The building has been in operation since August, 1913.

Two entrances to the service station are provided for vehicles, one leading to the private garage at one end of the station, while at the opposite end is a storage room for cars. Between the garage and the storage room are the station offices, the stock room and the service department workshop, the last named being in the centre.

The stock room is one of the vital features of the service station, and in it is kept an adequate supply of all kinds of parts for all types of machines built by the White Company, as well as supplies of fenders, radiators, tires, wheels and other equipment components. The exact condition of stock can be ascertained at any time by means of the perpetual inventory system in use. The stock room office, which is reached through a passage leading between the office of the station and the superintendent's office, is provided with a counter at which customers can be served.

The floor plan of the station is excellently arranged, and all operations are visible to the station superintendent from his office. The work shop is adequately equipped with machinery and tools for time and labor saving. A heavy wire grating divides the shop into two sections, one of which contains the machine tools, such as arbor presses, lathes, grinders and drills, and work benches aligning both sides of the section. On the other side of the grating is another line of benches, while through the centre of the entire work shop runs an overhead trolley equipped with chain hoists.

The heavy lifting, etc., is done by portable floor cranes, which can easily pick up a motor, rear axle or other heavy units from the chassis, and place them under the trolley hoists, which in turn can convey them to wherever desired in the work shop.

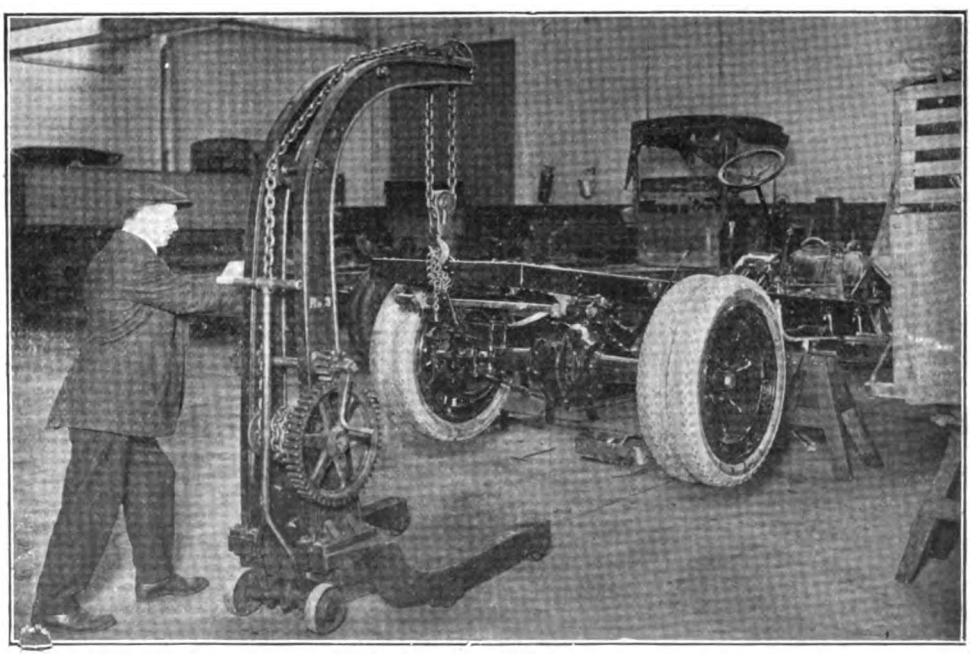
An unusual feature of the machine shop is that the tools are designed to perform work that is not usually done outside of the production factory. They can rebore, ream, lap or polish cylinder blocks or other units, and the standard of work is claimed to be up to the standard established in the factory. Lathes, rigged with jigs made especially for the work, can rebore or ream, while specially designed tools used with the drill press are utilized in lapping. With this equipment the White Company can lessen the cost of repairs, etc., and at the same time maintain its high standard of work.

The human element as a factor in efficiency has not been overlooked in planning the station. For the workmen a recreation and locker room has been provided, it being over the station offices and reached by a flight of stairs outside the building. Here is a bell that is rung two minutes before time to begin a job, to give the men time to stamp their work cards before going to the work shop via another flight of stairs leading to the floor of the shop.

The time card system is another means of giving the customer the lowest and most accurate cost. Every minute of time spent in working upon a particular job is shown by the record clock—stamped upon day or job time cards. This record is kept largely for the benefit of the customer, who thus learns what he is paying for.

The efficiency of the station hinges in large measure upon the abilities of the work men. The White Company's force is composed of specialized experts, each man being thoroughly trained in some one particular of the construction or equipment of White vehicles, either commercial or pleasure, both of which are served at this station. There is the man whose specialty is the adjustment or repair of different types of carburetors, another who is expert in the intricacies of steering gears, and others who are thoroughly trained in restoring electric batteries, engine starters and lighting systems, in rebuilding radiators, etc. Motor troubles are rectified in the motor department by men who are versed in that particular specialty, and consequently in the hands of this force of workers repairs, overhauling and adjustments are not only done expeditiously, but extremely well and economically.

The usual procedure of work is as follows: The machine is received at the garage, where a clerk checks it for equipment, after which the foreman of the repair department of the service station drives it into the shop. Trained workers remove all removable equipment, which is placed in a check room under lock and key. The chief tester appears and, first giving the machine a try out on the floor, takes it out on the road for thorough examination. When the car is returned a repair tag is made out in duplicate, the original to be attached to the ma-



Portable Crane with Which Heavy Units Are Raised Clear of the Chassis and Carried Away by Overhead Trolleys.

GENERAL NEWS OF THE MANUFACTURERS.

Gray & Davis, Inc., Boston, Mass., during 1914 did a business of $4,000,000, which is a high-water mark. The first six months the sales totalled $2,500,000, and the remaining portion of the year about $1,500,000. The earnings of the year were in excess of $300,000, over two-thirds of which was contributed in the six months to June 30.

The Herff-Brooks Corporation, Indianapolis, has announced a new small four, which is known as the Herff-Brooks 25 and will sell at $765. The car will be manufactured at the Richmond plant. It has a four-cylinder motor, developing 25 horsepower, the cylinder being cast en bloc. Left drive and centre control are used. The car has 106-inch wheelbase.

The Lozier Motor Car Company, Detroit, after a shut down for several months, has resumed work. Men are making up 550 cars, the materials for which were purchased by the syndicate that bought the plant at the receivers' sale. Negotiations for the sale of the plant to New York capitalists are being carried on by the operating company.

Dodge Brothers, Detroit, manufacturer of the Dodge automobile, has just installed in its laboratory a new torsion machine, which is in duplicate of one owned by the Japanese government, these two machines being the only ones in existence. This machine is known as a torsion automatic, autographic tester and is designed expressly for measuring the torsion or twisting strength of steel used in the manufacture of moving parts.

The Olds Motor Works, Lansing, Mich., states that present conditions assure an excellent spring business. The first train load order for the model 42 Oldsmobile touring cars, which originated with C. H. Larson, New York City, was for 120 cars. This order will occupy space of 42 freight cars and will make 42 car loads of the new model. J. B. Hall, sales manager of the company, states that it in one year made an increase of more than 700 per cent., in its selling organization, and that this resulted from the popularity of the four-cylinder car. A substantial increase in demand for cars in large cities is a further evidence of prosperity.

The Continental Motor Manufacturing Company, Muskegon, Mich., is in its banner year, according to A. H. Zimmerman, secretary-treasurer of the concern. It has contracts that will keep the plant running to full capacity until September. The company is employing 1700 men, is operating night and day, and is busier now than it was a year ago. Most of the orders, however, are for domestic trade, although a few war orders have been filled.

The Port Huron Construction Company, Port Huron, Mich., has closed a contract with the Regal Motor Car Company of Detroit, for the construction of 1000 motors of the four-cylinder type and which are known in the automobile field as the Jenks motor The concern will also build a number of eight-cylinder motors, which will be installed in Regal cars.

The Booth Felt Company, Inc., Chicago, will open a new factory at 116-118 South Fifth avenue. Edward S. Sheppard will manage the company's affairs.

The Abbott Motor Car Company, Detroit, has recently moved to a new location in the A. C. Knapp Company's plant, at Lafayette and Meldrum streets. The first Buick cars were built in this portion of the Knapp factory.

The Knight Tire and Rubber Company, Canton, O., announces the opening of a new branch at 215 West 51st street, New York City. This will be a distributing office for New York, New Jersey and western Connecticut. L. I. Ris has been placed in charge.

The K. P. Foot Rest Heater Company, New York City, has established its headquarters at 250 West 54th street. The company's offices were formerly at Boston, Mass.

The Somers Carburetor Company, Detroit, has been organized and will manufacture the Somers carburetor. James Somerville is president.

Wheeler & Schebler, Indianapolis, is issuing a leaflet in large size, dealing with the many triumphs won with Schebler carburetor equipment.

The Cutler-Hammer Manufacturing Company, Milwaukee, Wis., is publishing a booklet entitled "Gear Shifting by Electricity", which explains the principles and advantages of the Vulcan electric gear shift.

The Asbestos Protected Metal Company, Beaver Falls, Penn., is issuing a beautiful catalogue covering its line of Asbestostell for roofs and walls.

The Burd High Compression Ring Company, Rockford, Ill., is issuing a directory of piston ring sizes which tells the motor car owner the size to use in his car, irrespective of the make or model.

The Firestone Tire and Rubber Company, Akron, O., is sending out a handsomely lithographed large size folder, portraying the Los Angeles-Phoenix and El Paso-Phoenix road races, which were won on Firestone tires.

A. S. Hecht, New York City, doing business as Hecht's Magneto Exchange, has formed the Magneto Parts Company, Inc., to manufacture and distribute parts for all standard magnetos. E. M. Lowe is secretary-treasurer of the new company.

The Plant of the Olds Motor Works, Lansing.

The Lewis Spring and Axle Company, Jackson, Mich., has just announced an eight-cylinder, five-passenger car to sell at $985, equipped. The car will be known as the Hollier eight and it is manufactured complete in the Lewis factory. The company expects to turn out 3000 within the next year.

The Locomobile Company of America, Bridgeport, Conn., announces that it will this year increase its production of motor trucks from 1200 to 1500, and it is probable that the number will reach 1800. The models comprise three, four, five and six-ton trucks.

The J. M. Shock Absorber Company, Philadelphia, has opened a direct factory branch at 250 West 54th street, New York City. Users of J. M. shock absorbers are invited to run their cars to this branch and have factory experts make adjustments without charge. Edward Knauss is in charge.

The New Lite Manufacturing Company, Boone, Ia., which was recently incorporated for $50,000, is building a new plant there.

The J. I. Case Threshing Machine Company, Racine, Wis., announces that because of unusually heavy orders for trucks and tractors for export it has been obliged to increase its working force to 1400 men and in the near future it will be further increased to 1800 hands. Russia has purchased a large number of Case cars.

The Kissel Motor Car Company, Hartford, Wis., is working extra shifts in order to fill the foreign and domestic orders for pleasure cars and trucks.

Gray & Davis, Inc., Boston, Mass., has opened a new branch consisting of office and salesrooms at 245-49 West 55th street, New York City. W. W. Burke is in charge as eastern sales manager.

R. M. Owen & Co., New York City, manufacturer of the Entz electric transmission, has secured a factory at Fifth avenue and 142nd street. This will give the com-

Digitized by Google

pany 50,000 square feet of floor space.

The Republic Rubber Company, Youngstown, O., will open a European branch in London in the near future. Frank V. Springer will be in charge.

The Splitdorf Electrical Company, Newark, N. J., has secured the contract for supplying all 1916 Overland cars with the new Dixie magneto.

The National Motor Vehicle Company, Indianapolis, has purchased a tract of land adjoining its factory and will build a large addition to its plant. The company has just increased its capital stock to $600,000.

The Westinghouse Electric and Manufacturing Company, East Pittsburg, Penn., through its equipment department, has opened new sales service stations as follows: New York City, 250 West 54th street; 2025 Euclid avenue, Cleveland; 2007 Michigan avenue, 427 North Meridian street, Indianapolis.

The Haynes Automobile Company, Kokomo, Ind., according to its general manager, A. G. Seiberling, says: "There is as much difference between the light, high speed, high efficiency motor and the low speed motor as there is between a greyhound and a shepherd dog. The light, high speed motor, such as is found in the Haynes Light Six, is a distinct type of motor. Its reciprocating parts must be light—not for increased power, but for balance at high speeds and quick acceleration or getaway. The overall efficiency of the car depends much upon the ratio of power to motor weight. The high speed motor may reach speeds well up towards 3000 revolutions a minute, while the low speed motor rarely exceeds 1500 revolutions a minute. The bore is smaller.

The Thomas B. Jeffery Company, Kenosha, Wis., makes statement that much satisfaction obtains with owners of the new Jeffery Chesterfield Six. Experiments conducted at different times have, claim is made, proven the worm drive to be much more efficient than the bevel gear drive. In addition to its increased efficiency it has more strength and is silent in operation.

The Service Gear and Machine Company, Reading, Penn., has purchased the stock of gears, shafts and patterns of the service department of the American Die and Tool Company of that city. The former company will maintain a stock of transmission gears, spline shafts, counter shafts, bevel differential gears and axle shafts for a great many obsolete cars. The American Die and Tool Company will devote its energies to the production of transmissions, light car rear axles, gears and other parts for manufacturers only.

The Packard Motor Car Company, Detroit, is issuing a live wire bulletin entitled "Brobdingnagians of Battle and of Business", in which is portrayed thought for the American business man. The present war has brought many orders to the Packard Company for trucks to be used in active war fare. Department of Commerce reports show that truck shipments have averaged in value from $2,500,000 to $3,500,000 a month since last fall. More trucks were shipped in 30 days than during the whole of the year 1913.

The Ferro Machine and Foundry Company, Cleveland, has recently introduced two eight-cylinder V type motors for automobiles. The upper half of the crank case and the two cylinder blocks are in one casting. The dimensions of the motors are 3 by 3½ and 3¼ by 4, respectively.

The Maxwell Motor Company, Detroit, has purchased the business of the Piedmont Motor Company of Charlotte, and will continue the establishment as a direct factory branch.

The Willys-Overland Company, Toledo, O., manufacturer of the Willys-Utility truck, and its subsidiary company, the Garford Company, manufacturing the Garford truck, has disposed of its motor truck business to the Gramm Motor Truck Company and will hereafter manufacture the pleasure car only. The Gramm Motor Truck Company was a subsidiary of the Willys-Overland Company, but a controlling interest has been sold to the Geiger-Jones interests of Canton, O. The capital stock of the Gramm Company is $750,000 common and $489,000 preferred. The Willys Company owned $518,500 of the common stock.

The Cadillac Motor Car Company, Detroit, has had its eight-cylinder car become the official car of the Panama-California Exposition at San Diego. Three cars have been ordered by E. A. Davidson, chairman of the fair committee. These cars will be used by the members of the executive committee on official business. Two Cadillac cars have also been purchased for the Panama-Pacific Exposition at San Francisco, Cal.

The Dorris Motor Car Company, St. Louis, in adding a six-cylinder car to its line, has adhered to standard features of design, including unit power plant, multiple disk dry clutch, overhead valve mechanism with inclosed valves and speedometer drive from the inside of the gear case. It is a seven-passenger touring car and has a wheelbase of 128 inches.

The Maxwell Motor Company, Detroit, is building seven cars to be entered in the chief speedway events of the 1915 racing season. The different cars will be constructed for different classes so that their itinerary will include almost every race scheduled between the coast. Ray Harroun is the chief engineer of the company and he will superintend the construction of these cars.

The Paige-Detroit Motor Car Company, Detroit, is now working on a 24-hour schedule, with three eight-hour shifts.

The Swinehart Rubber and Tire Company, Akron, O., is having plans made for a three-story reinforced concrete and brick addition, to be made to its plant at a cost of $75,000. It will measure 60 by 130 feet.

The Pennsylvania Rubber Company, Conshohockon, Penn., will increase its force from 800 to 1400 men as soon as its new plant is opened.

The F. and H. Wire Wheel Company, Springfield, O., has moved its plant and offices from Columbus, O., to obtain increased manufacturing facilities. It has a much larger plant with greater facilities for machine work and assembling.

The Rayfield Motor Company, Chrisman, Ill., has arranged to produce the Rayfield 20 in large numbers. The engines, transmission and axles will be supplied by the Pittsburg Model Engine Company; bodies and tops will be manufactured in Indianapolis, hoods, fenders and radiators will be made in Detroit; wheels in Columbus, springs in Chicago and the frames will be built at Milwaukee. The final assembly will be at the company's plant in Chrisman and the Great Western Automobile plant at Peru, Ind.

The Autocar Company, Ardmore, Penn., held its annual meeting recently and the former board of directors was re-elected as follows: President, David S. Ludlum; vice president, John S. Clarke; secretary-treasurer, Edwin A. Fitts, and assistant secretary-treasurer, Frank C. Lewin.

The Hartford Auto Parts Company, Hartford, Conn., has been completely reorganized, the final step being taken by the securing of additional capital and the election of officers. The company operating with its newly acquired financial strength is now able to take care of all requirements. Cyrus C. Chambers is president and the vice president and treasurer of the company is James M. Carney.

Mich., Where the Oldsmobile Models are Made.

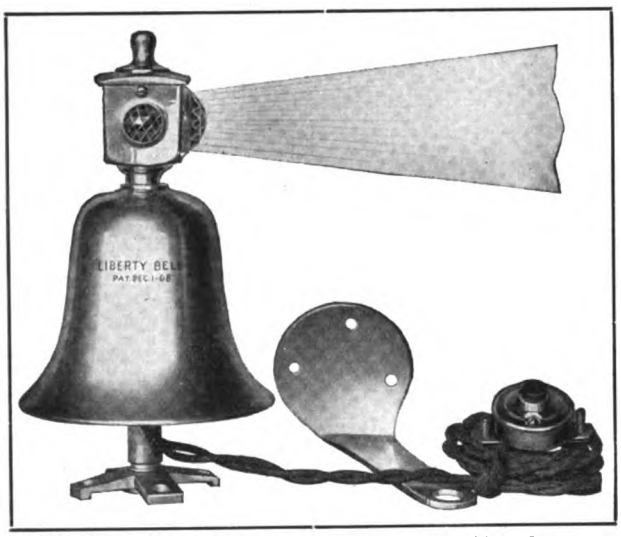
THE LIBERTY BELL COMPANY.

Manufacturers of Novel Electric Signal Has Exclusive Territory for Worth-While Dealers.

The Liberty Bell Company, the Arcade, Cleveland, O., manufacturer of the novel electric signal known as the Liberty Bell, is making a very liberal proposition to



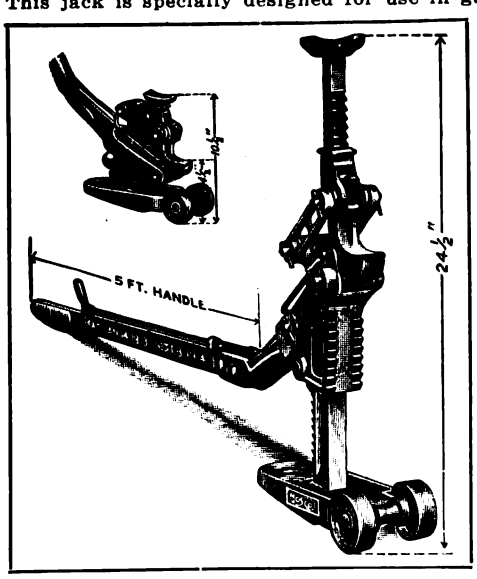
The Liberty Bell, a New Automatic Signal.

dealers who wish to handle an accessory in much demand. One type of this bell not only serves as a signal, but is also a warning lamp. Mounted on the top of the bell and fully protected, is a lamp with a ruby lense, which is flashed when the bell is sounded, as may be noted by the accompanying illustration. The sound of the bell is melodious and penetrating, and appeals to all motorists who desire a high-grade, efficient signal, pleasing to the ear as well as the eye. The company points out that the dealer who wishes to handle this line does not have to make a large investment, as a half or quarter dozen will demonstrate its quality and the existing demand for this novel and interesting accessory. A letter or post card to the company will bring complete details to the inquirer.

MOSCO EXCEL GARAGE JACK.

Motor Specialties Company Is Selling a Powerful Tool for Rapid and Easy Handling of Automobiles.

The Motor Specialties Company, Waltham, Mass., manufacturer of the widely known Mosco products, is selling the Excel garage jack, a heavy and powerful tool, with which large and small cars can be easily handled. This jack is specially designed for use in garages, service stations, repair shops, tire agencies, etc., and weighs 50 pounds. As may be seen from the accompanying illustration, it has a five-foot handle, which gives powerful leverage, and which will raise either end of a car 4½ inches with a single stroke. The range of lift is from five to 26 inches from the floor. The company makes liberal discounts to garages and dealers. Dealers and agents interested should write for the 1915 Mosco catalogue, mentioning The Accessory and Garage Journal.

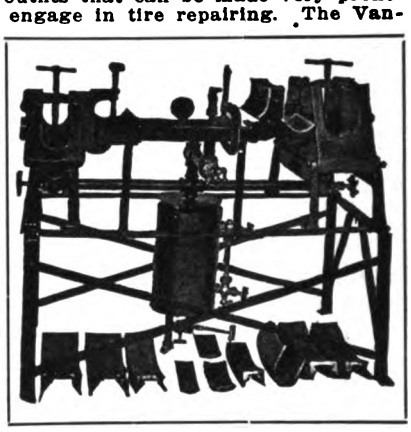


The Excel Jack Sold by the Motor Specialties Company.

VANDERPOOL VULCANIZING OUTFITS.

Springfield, O., Company, makes Practical Equipment for the Service Station or Repair Shop.

The Vanderpool Company, Springfield, O., is manufacturing vulcanizing outfits that can be made very profitable by those who engage in tire repairing. The Vanderpool vulcanizer is a two cavity, machine fit, with which the repairman can do any work necessary on tubes or castings quickly and with minimum labor. This outfit is simple in construction and no expense is required after the initial investment. The price of the outfit is extremely reasonable and every sale is made with an absolute guarantee of material and workmanship. The repairman who is enterprising can make large profits on a small investment. The garage or repair man who is interested in a vulcanizer that will do any work should write the company for full information and a copy of its latest catalogue, mentioning The Accessory & Garage Journal.



The Vanderpool Vulcanizing Outfit.

FEDERAL TIRE SERVICE COMPLETE.

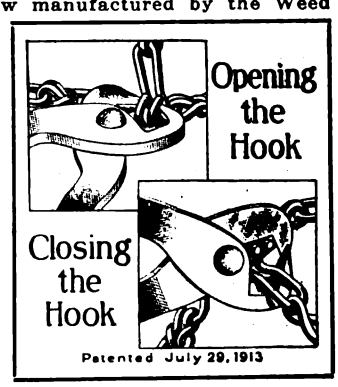
Well Known Milwaukee Concern Co-Operating with Its Agents and Customers to Insure Satisfaction.

The Federal Manufacturing Company, Milwaukee, Wis., manufacturer of the Federal double-cable-base tires, has a service for its dealers and customers that is business promoting from every viewpoint. Federal tires, rugged or plain treads, are made of pure para rubber and best quality "square" woven fabric. Double-cable-base construction eliminates rim cutting, tube pinching, side wall blowouts and the danger of slipping from rims. Claim is made that Federal tire users are free from these annoyances and causes of expense. It is worth any dealer's while to write the company and secure full details of its selling plan, its trade price list, etc.

WEED TIRE CHAIN PLIERS.

New Repair Tool for Circular Hooks Is Produced by the Weed Chain Tire Grip Company.

A pliers specially designed for opening and closing the circular hooks of the new type of cross chains for Weed tire chains is now manufactured by the Weed Chain Tire Grip Company, Bridgeport, Conn., which is known as the Weed pliers. The ends of the latest types of Weed cross chains are fitted with circular hooks, and the pliers are intended to expedite the removal of these hooks when a chain is broken and must be replaced. The accompanying illustrations shows the pliers with which the repair can be made in a very short time. With the flat end of the pliers the hooks can be spread, and the patented square opening in the tool is used for closing the hooks when making replacements. All users of Weed chains will find this tool especially advantageous, so that practically all motorists can be regarded as probable customers for them. Dealers who sell Weed chains can, by mentioning the Accessory and Garage Journal in their inquiry, receive detailed information direct from the company.



Weed Chain Pliers.

NEW LOCATIONS AND REMOVALS.

The Central Automobile Company, Albany, N. Y., has removed to 450 Central avenue.

John F. Hunt, Lynn, Mass., agent for the Reo car, has moved into show rooms at 109 Summer street. The location is more attractive and better adapted to showing cars than the former garage at 108 Empire street. He carries a complete line of accessories and supplies.

The Gahran-Pinchbeck Company, Albany, N. Y., distributor of the Buick car, has removed to larger quarters at 132 Quail street.

The Albany Motorcycle Company, Albany, N. Y., agent for the Harley-Davidson motorcycle, has removed to larger quarters at 222 Central avenue.

The Fairfield Automobile Company, Bridgeport, Conn., has moved into new sales rooms at Broad and John streets. The Imperial car is represented.

The Johnson Motor Car Company, Philadelphia, distributor of the Haynes and Saxon cars, is now located at 134 North Broad street.

The Dayton and Troy Auto Company, Toledo, O., is to remove into new quarters in the Beckel block. The company handles the Ford car.

The Kelly-Springfield Tire Company, San Francisco, Cal., has removed to larger quarters at Van Ness avenue.

Stanley Lusader, Frankfort, Ind., is now located in North Jackson street. The building was recently overhauled and contains a repair shop, which occupies the whole of the second floor. He proposes to keep his establishment open day and night and every day in the year.

The Goodyear Tire and Rubber Company, Omaha, Neb., is now located at 2549 Farnham street. The increasing business necessitated this move.

The Auto Tire Sales Company, St. Louis, Mo., has removed to a new building at 3434 Locust street. The company handles the Marathon tires.

M. J. Wolfe, Brooklyn, N. Y., will open new quarters at 1150 Bedford avenue. He handles the Moon car. A service station is being erected at 172 Quincy station.

The International Motor Truck Department of the International Harvester Company, Harrisburg, Penn., is now located at 619 Walnut street.

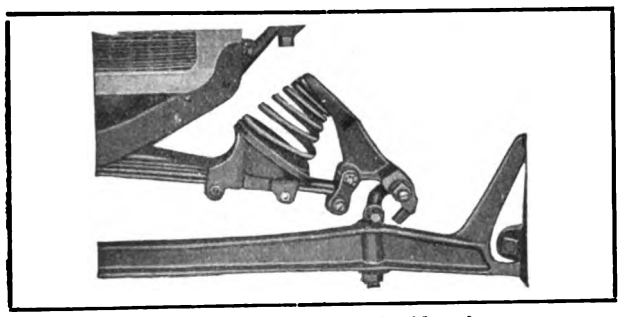
HASSLER SHOCK ABSORBER.

Indianapolis Concern Has Efficient Equipment for Ford Cars That Is Greatly in Demand by the Trade.

Robert H. Hassler, Inc., West 10th and Canal streets, Indianapolis, Ind., is selling a set of four Hassler shock absorbers to Ford owners at a retail price of $20. This



The Hassler Ford Shock Absorber.

equipment as may be seen from the accompanying illustration, is a new type absorber, with which the company maintains tossing and rebound are entirely eliminated. These absorbers make for easy steering and safe driving, and will not strike the lamp brackets or body. The company is selling the Hassler device by comparing its qualities with similar equipment, and the guarantee is broad in every respect. By inquiry made to the manufacturer at the above address the dealer or jobber will receive detailed information of the absorber installation requirements, etc., together with prices and discounts.

BIG DEALERS' OPPORTUNITY.

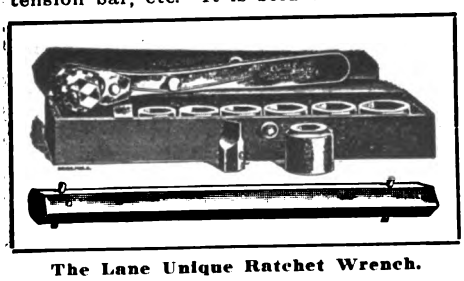
Cotton Company's Complete Line of Bodies for Ford Cars Meet a Very Large Demand.

The dealer who desires to sell automobile bodies, including a type designed for Ford chassis, will be much interested in the product of L. M. Cotton, Inc., 922 Commonwealth avenue, Boston, Mass., which has exceptional qualities and large opportunity for sales. The Cotton Company will exhibit a series of its bodies at the Boston automobile show and will occupy spaces 331, 332, 333 and 334 in the basement. This company is building a Ford limousine body that dealers should find an excellent seller. The margin of profit on Cotton bodies is exceptionally liberal, and details of the company's sales proposition can be obtained by writing the company or visiting the company's booth during the show.

LANE UNIQUE RATCHET WRENCH.

A Special Tool for Close and Difficult Work from Which the Dealer Should Realize Large Profits.

Will B. Lane, 180 North Dearborn street, Chicago, Ill., is manufacturer of the Unique ratchet wrench, a special tool that should be in large demand, and ought to be a source of lucrative profit for progressive dealers. The Lane Unique wrench is designed for use in close and difficult work and for service where the space is limited. One desirable quality is that it can be used to turn nuts very close to a wall. The tool is complete in every detail, including sockets that will not break or split, extension bar, etc. It is sold with a strong guarantee. It will be specially useful for repairmen or garagemen, as with it much work can be done that is frequently performed with a cold chisel, a method that is necessarily destructive.



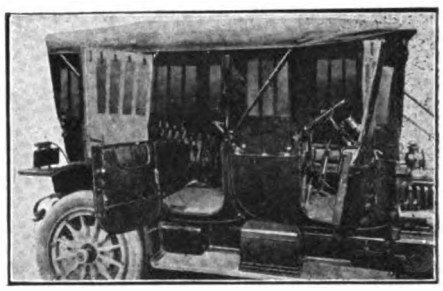
The Lane Unique Ratchet Wrench.

An inquiry to the above address will bring the dealer or jobber full details of the construction and uses to be made of the tool, trade discounts and other information that will be of interest to interested parties.

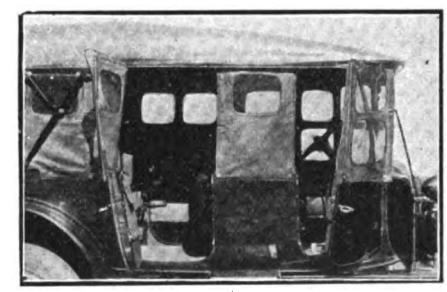
BLACKMORE CURTAIN OPENERS.

Dayton Top Improvement Company Equips Its Latest Design Automobile Curtains with This Device.

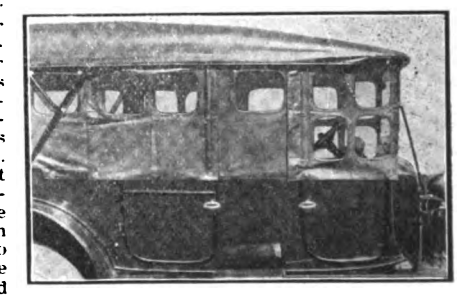
The automobile curtains made by the Dayton Top Improvement Company, Dayton, O., are equipped with the Blackmore curtain opener, which the company maintains will afford the greatest convenience for car users. With this opener the motorist can open the door instantly and close it tight without buttons. A bracket supports the curtain at the door edge and swings open the door section of the curtain, or tightly closes it. This eliminates the use of curtain buttons. The company states that this improvement has been used, because of the many unusual qualities at an increase in cost, on the 1915 models of Packard, White, Cadillac, Chalmers and Hupmobile cars. The curtains are being tried by other manufacturers, and the manufacturer expects that a large number of concerns will add them to their equipment. The Blackmore curtain openers are especially desirable for winter use, although their convenience is equally satisfying whenever curtains are needed. The equipment practically incorporates the curtains with the doors, so that both are opened and closed together, and the passenger can as conveniently enter or leave the car as he would a limousine. Motor car manufacturers using these find that the curtains have increased the utility and comfort of open cars during the winter months, for instant ingress or egress to a car without the necessity of removing the curtains from fasteners, is a quality that is highly approved by ladies.



Dayton Curtains with Doors Open.



Dayton Curtains Used on Packard.



Car Completely Enclosed with Dayton Curtains.

These retail at $1.50 a door curtain and liberal discounts are made to dealers or top makers. Any accessory dealer or garageman interested in this line should communicate with the company and mention The Accessory and Garage Journal. Full information as to discounts, selling plans, etc., will be supplied.

ELECTRIC STARTER FOR FORD CARS.

Puritan Machine Company, Detroit, Mich., Can Make Immediate Delivery of 400 Complete Systems.

The Puritan Machine Company, 41 10th street, Detroit, Mich., has purchased the assets of the Detroit Electrical Appliance Company, maker of Deaco electric lighting and starting systems. This purchase includes the stock and repair parts of the Deaco Company, from which the Puritan Machine Company can make immediate delivery of 400 complete systems. These are offered for $55 each, f. o. b., Detroit. These starters are adaptable to the Ford or other make cars, and are being sold by the Puritan Company for less than cost.

804—Illinois House wants information relative to horns, plugs, speedometers, tire accessories, tires, tools and wearing apparel.

807—Wisconsin Company is anxious to secure arbor presses, bolts, bulbs, carburetors, charging apparatus, commutators, cylinder machines, drills, dynamos, gasoline heaters, pistons, plugs, rheostats, shapers, tire accessories, tires, waste, wrenches, oils and greases.

810—Indiana Company wants wholesale quotations with a view to jobbing to the trade on air compressors, air pumps, anti-rattlers, asbestos, dry cell batteries, belts, bulbs, bumpers, burners, ignition cable, catalogues, cans, caps, carbide, cements, clamps, coils, commutators, connectors, drills, fire extinguishers, gaskets, gauges, goggles, graphite, headlights, horns, hose, ignition, jacks, lamps, packing, patches, pins, platinum, plugs, primers, pumps, radiators, rubber, screws, searchlights, seats, shock absorbers, soaps, sockets, solder, speedometers, starters, tape, tire accessories, tires, tools, tubing, ventilators, voltmeters, vulcanizers, washers, waste, wearing apparel, windshields, wire and wrenches.

811—Virginia Firm would like to hear of a line of batteries, celluloid, chains, dashes, horns, plugs, pumps, starters and tools.

814—Kentucky Company is in the market for air compressors and charging apparatus.

817—Maryland Firm wants information relative to batteries, bolts, bulbs, bumpers, carbide, cements, chains, battery connectors, cutters, gasoline, graphite, horns, hose, jacks, nuts, packing, patches, pumps, soaps, tape, tire accessories, tires, valves, washers, oils and greases.

820—California Company wants dimmers, fire extinguishers, headlights, horns, lamps, plugs, reflectors, searchlights, shock absorbers, storage systems, tire accessories, tires, wheels, whistles, oils and greases. The goods to be used for sale.

822—Indiana Company is in the market for air compressors, air pumps, anti-rattlers, anvils, arbor presses, axles, banding, batteries, bearings, belts, bodies, boilers, bolts, brakes, brushes, bulbs, bumpers, burners, cabinets, cable, camshafts, cans, carbide, cases, castings, cements, chains, charging apparatus, chemical tanks, clamps, clips, cloth, clutches, coils, collars, commutators, cones, connectors, controllers, cranes, cups, cutters, cylinder machines, cylinders, doors, drills, engines, fans, fenders, fire extinguishers, gaskets, gasoline gauges, gears, generators, goggles, graphite, grinders, hammers, headlights, hoists, horns, hose, hubs, hydrometers, injectors, jacks, joints, knuckles, lamps, lathes, lubricators, machinery, magnetos, motors, nuts, odometers, paints, pedals, pinions, pistons, platinum, plugs, polishes, presses, pullers, pulleys, races, radiators, ratchet drills, reamers, reflectors, rims, scrapers, screws, shafting, shims, sockets, solder, speedometers, starters, steel, tape, terminals, tools, transmissions, valves, varnishes, vises, vulcanizers, washers, washstands, waste, wheels, windshields and wrenches. The goods to be used in a general repair and rebuilding shop.

824—New York Company is anxious to secure air compressors, air pumps anti-rattlers, bulbs, cable, carbide, cements, cranes, fire extinguishers, graphite, hammers, hose, jacks, nuts, printed matter, carbon removers, stampings, vulcanizers, waste, wrenches and recording time clocks. Also wants metal name plates with its own name for attachment to new cars.

828—Iowa Concern wants air compressors, air pumps, batteries, belts, bolts, caps, carburetors, chains, dynamos, gasoline, goggles, jacks, locks, maps, rheostats, shock absorbers, solder, speedometers, storage systems, switchboards, tire accessories, tires, tools, tops and parts, tubing, valves, voltmeters, washers, waste, wire, wrenches, oils and greases, which are to be used as garage equipment.

831—North Dakota Company is in the market for air compressors, air pumps, anti-rattlers, anvils, asbestos, axles, banding, batteries, belts, bolts, brakes, brushes, bulbs, bumpers, burners, cable, carbide, carburetors, cements, chains, clamps, clips, clutches, coils, cones, curtains, dimmers, drills, fans, fasteners, fenders, gauges, glass, goggles, graphite, grinders, guards, hammers, headlights, hoists, horns, hose, hubs, ignition, jacks, jigs, lamps, lathes, magnetos, mufflers, nuts, pedals, pinions, pins, pistons, plugs, polishes, primers, printed matter, pullers, pulleys, pumps, punches, racks, radiators, ratchet drills, reamers, rectifiers, reflectors, regulators, rims, rods, rubber, scrapers, searchlights, seats, shock absorbers, soaps, sockets, springs, starters, testers, timers, tire accessories, tires, tools, trunks, valves, vaporizers, vises, voltmeters, vulcanizers, washers, waste, wearing apparel, wheels, whistles, windshields, wire, wrenches and bodies for pleasure cars.

833—Washington Concern wants information relative to air compressors, cable, charging apparatus, gaskets, gauges, headlights, heaters, horns, hose, lamps, magnetos, plugs, polishes, primers, radiators, reflectors, searchlights, seats, shims, shock absorbers, soap, starters, steering wheels, storage systems, switchboards, switches, tanks, terminals, trunks, tubing, vulcanizers and waste.

PYRENE FIRE EXTINGUISHERS.

Exceptional Opportunities Are Offered to Agents for This Fast Selling Safety Equipment.

The Pyrene Company of New England, 88 Broad street, Boston, Mass., is offering very attractive agency contracts to dealers in motor vehicle supplies and equipment. By using the Pyrene extinguishers the motorist can save 15 per cent. of automobile fire insurance. This fire extinguisher has been approved by the National Board of Fire Underwriters, and its efficiency has been demonstrated in hundreds of instances. In addition to protecting the automobile the extinguisher safeguards other property. Brass and nickel plated quart capacity extinguishers are standard equipment, are light in weight and occupy but little space in a car.

Pyrene extinguishers make an excellent display for dealers and garagemen, they sell rapidly and agents are sure of quick returns on capital. The company makes exceptional offers to dealers, and a letter to the Boston address will bring full information as to selling plans, price lists, discounts and all other data of interest. In these days of safety first crusades the dealer handling such a line as Pyrene realizes quick returns on his investment, and with the cooperation the company gives its dealers sales are guaranteed from the start.

The annual election of officers for the Automobile Trade Association of Philadelphia was held recently at the clubrooms, Broad and Callowhill streets, and the following officers were elected: President, William P. Herbert; vice president, J. C. Bartlett; secretary and treasurer, J. E. Gomery.

THE DIXON DEALERS' BOOKLET.

Jersey City Manufacturer of Graphite Automobile Lubricant Has Published Valuable Literature.

In keeping with its policy of co-operating with its dealers to the fullest extent, the Joseph Dixon Crucible Company, Jersey City, N. J., has issued a 16-page booklet describing its graphite automobile lubricants. These are supplied to the Dixon dealer, and the name and address of the latter are printed on the three-color cover. This cover pictures the entrance to a garage or supply house and the name of the dealer can be printed, as if a sign, over the door. The first four pages are devoted to a pointed address to those interested in graphite lubrication, and following this are descriptions of the Dixon lubricants. A distinctive feature of these lubricants is the use of a series of well drawn pen and ink sketches that serve the triple purpose of showing the "which, where and how" of Dixon's graphite automobile lubricants. This booklet is an illustration of the Dixon cooperative thoroughness of the company's selling plan, and will be explained to interested dealers at request.

The National Automobile Chamber of Commerce has designated dates for a commercial vehicle convention. The New York automobile show for 1916 will open New Year's eve and the Chicago show will be opened January 22. The commercial vehicle convention will be held in Detroit, May 5 and 6, following the regular monthly directors' meeting. The commercial vehicle committee of which Windsor T. White is chairman, is arranging to have important papers presented.

Evidence that the recent shows at the Grand Central Palace, New York, and the Coliseum at Chicago, broke all records for attendance was shown.

When he comes to you for a new Spring—sell him a Tuthill Titanic

NO SPRING CAN BE MADE TOO STRONG

Don't be afraid of selling your trade a spring that is too strong—it can't be done.

When your customer comes into your place and asks for a Spring, tell him, "Here's the Tuthill Unbreakable Titanic—the best spring made, guaranteed forever against center breakage—a lubricated, easy riding spring that I personally guarantee will last as long as your car."

Don't hesitate to make this guarantee—we will back you up—because the Tuthill has no Center Bolt—it is strongest where 75 out of 100 other springs break.

Tuthill Titanic Unbreakable Spring

GUARANTEED FOREVER AGAINST CENTER BREAKAGE

IMMEDIATE SHIPMENTS

It won't be long now till a lot of old cars will be awakened up from their long winter's sleep.

And new cars will be as thick as grass-hoppers in your territory this Spring.

Just how are you going to "cash in" on this repair business that is sure to come?

It's easy. Just wire or write your jobber or send direct to us. Most all jobbers carry a complete line of the different sizes of Tuthill Titanic Unbreakable Springs for all kinds of cars. Our quick Service Supply Department never sleeps—we can ship most orders on the day they are received—any special order within 48 hours.

Write today for "Special Proposition"

Tuthill "Titanics" can be easily adapted to any axle construction and quickly mounted without any extra expense.

TUTHILL SPRING CO.,

776 POLK ST., CHICAGO, U. S. A.

Tuthill Titanics are Guaranteed Absolutely Against Center Breakage.

Strongest at the Center Where the Greatest Strain Comes.

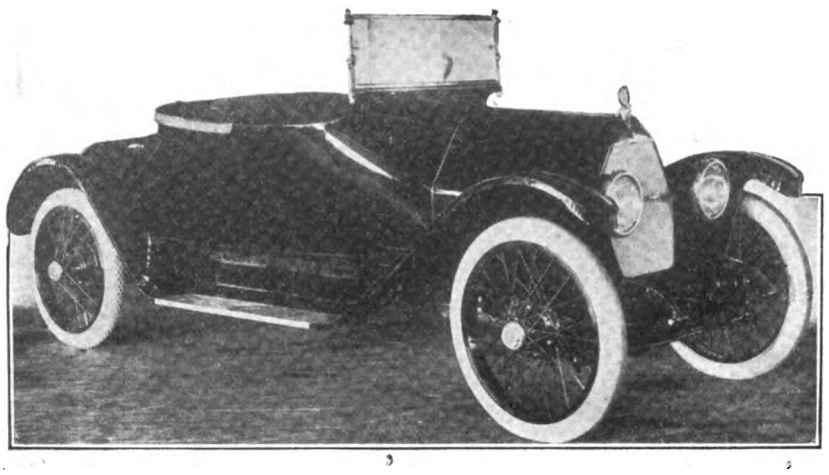
LEWIS VI FOR 1915.

Refined Touring Model Selling for $1600 Equipped.

THE Lewis VI for 1915 is a car distinctive among others for its streamline, full torpedo body, and simplicity throughout. It is a touring type, manufactured by the



The Lewis VI Roadster, with Disappearing Top, Which Has Space for Three Suitcases Behind the Seat.

L. P. C. Motor Company, Racine, Wis., which sells for $1600. It is finished in a deep Brewster green, the fenders, frame and hood being enamelled black.

Cast en bloc, the six-cylinder, L head, water cooled motor, with bore of 3½ inches and stroke of six, has a horsepower rating of 29.40 by S. A. E. formula, but the company's engineers state that repeated trials establish production in excess of 60 horsepower with brake tests. The main cylinder casting, the crank case and the flywheel housing are molded in one piece. The cylinder block head is a single cored casting, with water spaces that coincide with the water jacket passages in the cylinder casting. This is so designed that its removal affords access to all the exhaust and inlet valves, as well as to the pistons.

The crank case is closed by a flat, easily removed aluminum bottom plate, which does not support the crankshaft. The crankshaft is mounted on three main bearings, all 2¼ inches in diameter, 2¾ inches length at the front and centre and three inches length at the flywheel end. The flywheel is bolted to a flange forked integral with the crankshaft. The I section connecting rods are high quality material, and the weight of the reciprocating parts is kept to a minimum. The connecting rod caps are each held in place by two chrome nickel steel bolts, and the big end bearings, which are faced with Parsons' white brass, are 2¼ inches in diameter and two inches length.

The valve and valve-actuating mechanism are of unusual and interesting construction. The valves are operated by a single camshaft. The valves themselves, of 7/16-inch lift, are 1 13/16 inches in diameter. Instead of push rods, small rocker arms are assembled into the cylinder walls from the outside, where they are held in pairs by a yoke construction, by which a single stud and yoke at once aligns and holds in place the whole actuating mechanism for two adjacent valves. In the rocker arms are mounted the hardened cam rollers, while on their ends, under the valve stems, are hinged adjustable valve lifters, each constituted of an eyebolt with hardened cap and check nuts, the former engaging directly with the valve stem.

The Remy electric starting motor is so arranged that it constitutes an inbuilt part of the power plant. It is mounted on a bracket integral with the right side of the motor casting, and this, with the shaft, driving sprocket, and the water circulating pump, are attached by bolts in elongated holes, so that the entire assembly can be moved slightly to the right, affording adjustment to the silent chain, by which it and the camshaft are driven. The ignition current supply is a battery, and a distributor takes the current from the same battery that serves the lighting and starting systems.

CHANDLER LIGHT WEIGHT SIX.

Chandler Reduces Price of Light Six to $1595.

HAVING reduced the price of its light weight six-cylinder car to $1595, the Chandler Motor Car Company, Cleveland, O., is equipping this chassis with a new series of open and closed bodies. An improved stream-line effect predominates in its coupe, sedan, cabriolet and limousine models. The coupe, which is listed by the company at $2200, is illustrated on this page.

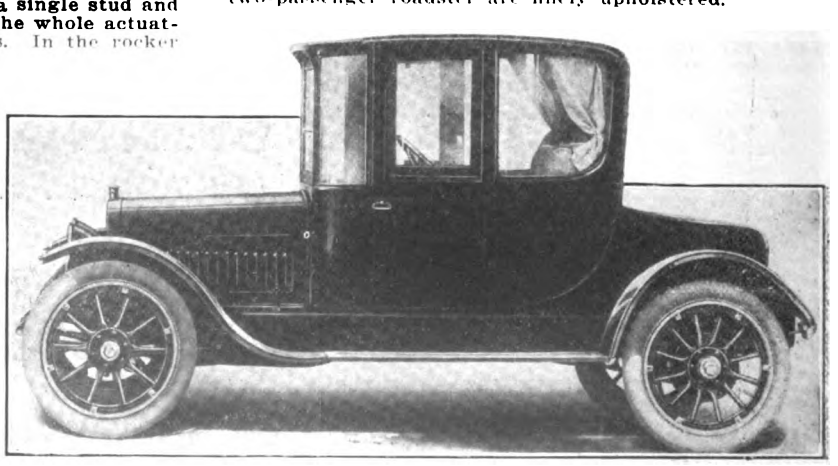
The Chandler engineers have in no way changed the design of the car's power plant, which is practically the same as for the past two seasons. A detailed description of Chandler car was recently published in the Accessory and Garage Journal, but a brief resume follows: The six-cylinder, L head, motor cylinder units are cast in blocks of three, with bore 3⅜ inches and a stroke of five, and has a horsepower rating of 27.40 by the S. A. E. formula. All valves are enclosed and a silent motor has been built by using imported silent chains to operate the cam, pump and magneto shafts. The ignition system consists of a high-tension Bosch magneto and Bosch spark plugs. A Gray & Davis electric generator is used for lighting, and the engine is fitted with a Gray & Davis starting motor. A spiral cut drive shaft pinion and master gear insure an exceptionally quiet rear axle.

Of the new Chandler body styles, in the limousine all front seats are upholstered in leather, having space for driver and one passenger The rear compartment has a 47-inch seat, with generous seating accommodations for three. The two extra seats may be folded, but when in use the passengers may sit facing either direction. The windows in the two rear doors are adjusted by patent regulators to any desired position. The limousine is exceptionally light, weighing 3175 pounds.

The sedan model is an owner-driver type, with all passengers enclosed. The rear seat, like that of the limousine, is 47 inches wide, seating three people. The front seat folds when not in use to give access to the driver's seat. The weight of the sedan fully equipped is 3125 pounds.

The coupe will seat two passengers facing forward, and has a corner seat for the third passenger facing rearward. This model weighs 3050 pounds. The Chandler cabriolet is an admirable car for all-year-round use. Two passengers, exclusive of the driver, facing forward, can be carried. With the leather top and side windows in position the car is ideal for winter driving, having all the advantages of a coupe. With the top and windows lowered the cabriolet has the appearance of a fine looking roadster model. The windows fold into the doors. To enclose the car the doors are opened, the windows raised and the doors closed. On all Chandler models the windshield is adjustable for rain or clear vision, or ventilation. The weight of the cabriolet is 2915 pounds.

Both limousine and coupe are upholstered in Bedford cord and lace of high-grade material, and have the usual equipment of curtains, interior electric lights and other conveniences. The five-passenger touring car and the two-passenger roadster are finely upholstered.



The Chandler Light Six Three-Passenger Coupe.

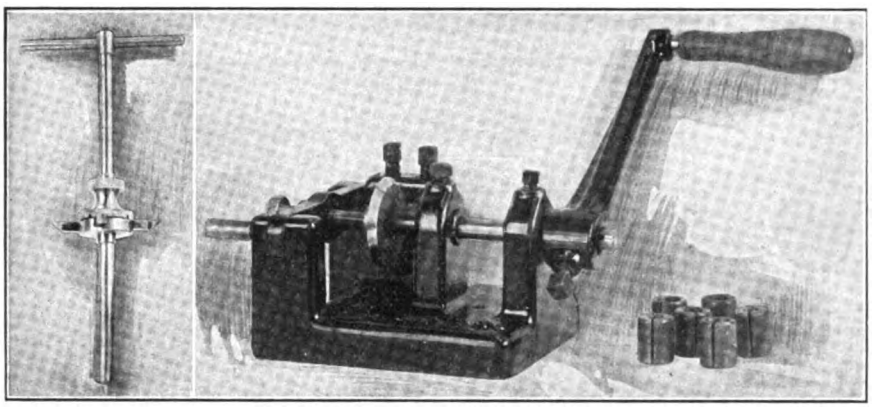
AMERICAN VALVE TOOLS.

Useful Equipment That Will Be Found Extremely Practical in the Work Shop.

The American Valve Tool Company, Stamford, Conn., is manufacturing a complete line of American adjustable valve seating and valve facing tools, which should be especially attractive to dealers and garage men. These tools, shown in the accompanying illustration, are stated to be adjustable to any size valve seat in less than 30 seconds. The tool is supplied with four different size pilot stems to fit the different size valve heads, an arrangement that makes possible trueing of eccentric valve seats. The American valve tool is made in two sizes and will reseat all poppet type valves from those of the motorcycle to those of the largest vehicle engine.



The American Adjustable Valve Seating and Facing Tools.

The refacing tool is especially valuable in the garage or repair shop, as it is quickly and easily adjusted to any size valve stem, as well as to any diameter valve. It can be permanently attached to the work bench, screwed or clamped to the wall, and with it valves may be refaced accurately in quick time.

MILLER RUBBER COMPANY.

Manufacturer of Noted Tires Is Making Exclusive Agencies with Dealers in All Sections.

Following a nation-wide advertising and publicity campaign, the Miller Rubber Company, Akron, O., is making exclusive agencies in all parts of the country. The dealer in Miller tires, the company points out, does not divide his profits with others. He controls his own tire trade and meets with no competition from other Miller tire dealers. The latest addition to the Miller publicity medium is a new six-page folder. The company will supply these to dealers with their names imprinted on them. This folder makes answer to the skid question recently asked by the company in its national advertising campaign. This answer, the company states, should be sent to every car owner in each dealer's territory, and if any dealer has a list too large to fully supply the company will make a reasonable proposition of assistance. By addressing the company and mentioning the Accesory and Garage Journal, the inquirer will be sent complete details relative to the Miller campaign.

GOODYEAR SHOW CASE OFFER.

Akron, O., Company Is Giving Exceptional Co-Operation to Dealers Throughout Country.

The Goodyear Tire & Rubber Company, Akron, O., in keeping with its policy of co-operation, is offering a handsome show case free to its dealers. This is one of the company's stimulations of business, which is certain to be productive of large results. The show case is for the display of Goodyear accessories, and the company points out that a two-minute explanation of the use of a Goodyear "tire saver" will often give a sale. With the case a dealer can demonstrate how quickly a customer can patch a tire with Goodyear quick repair gum; how to use the Goodyear friction tape, and a dozen other Goodyear specialties. The company offers either a small, medium or large case, the size depending on the stock the dealer carries. The medium size case is 20 inches high, made of mahogany finished metal, with glass top and front, and a shelf and stock compartment in the rear. The ordinary cost of such a case would be $15, but the company offers it free to all its dealers. Dealers who are interested in the Goodyear line should address an inquiry to Desk 124, which will bring full details, without any obligation on the dealer's part.

WELDING EQUIPMENTS.

Dyer Apparatus Company Producing Complete Outfits That Meet All Possible Requirements.

A wide variety of welding and decarbonizing equipments is produced by the Dyer Apparatus Company, Cambridge, Mass. One of these, Style A, is shown herewith, and this outfit includes everything necessary for work of any character. The style A combined welding and carbon removing outfit is complete in every particular, and can be made very profitable in the garage and repair shop, as the range of work it will perform is practically unlimited.

The Dyer Apparatus Company states that its regulators, by tests on a mercury column, have proven their high degree of efficiency. The flow of gases is regular and steady, as the correct proportions are always maintained, assuring accurate and satisfactory results.

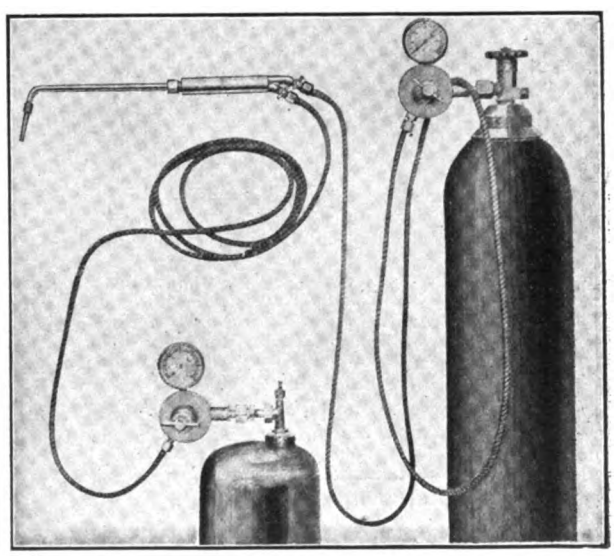
The style A carbon removing outfit is a high-grade, popular-priced apparatus. The regulator is a diaphragm type with a hard rubber seat and phosphor bronze diaphragm, designed for high pressure. A double connection is used at the tank end, fitting either the standard Linde tank or the ¾-inch straight thread sometimes used on oxygen tanks.

The gauge indicates to 150 pounds reading and has a bevel glass. The hose is the best grade, having a woven linen cover, and is tested to high pressures. Couplings are provided at either end, making for easy and rapid assembly and disassembly.

Particular attention is directed to the torch. The drop handle maintains the hose in a natural position, preventing wear and breakage at the joint, and the trigger valve is instantaneous in operation, shutting off the supply of gas, or bringing it into service without using both hands. The tube is of flexible copper, a decided advantage.

The maker states that with this outfit carbon can be completely removed from a gas engine cylinder in from two to five minutes. An extra long nozzle is supplied for removing carbon from mufflers when desired.

The Dyer Apparatus Company is manufacturing an equipment which can be converted to a decarbonizing outfit, at a very moderate cost. Details of this, as well as others produced, and trade prices, will be supplied to those addressing the company. The Dyer Apparatus Company invites the trade to visit its plant, which is one of the largest welding shops in New England.



Style A Combined Welding and Decarbonizing Equipment Manufactured by the Dyer Apparatus Company.

The Iowa Retail Automobile Dealers, Association of Des Moines, Ia., held its annual meeting recently and the following officers were elected: President, J. F. Russell, Creston; vice president, Jacob Friedman, Dyersville; secretary-treasurer, S. L. Seeman, Des Moines. The directors are: D. O. Babcock, Gowrie; W. B. Sloane, Brooklyn; Edward O'Connell, Lake City; Charles England, Van Meter, and T. S. Wood, State Center.

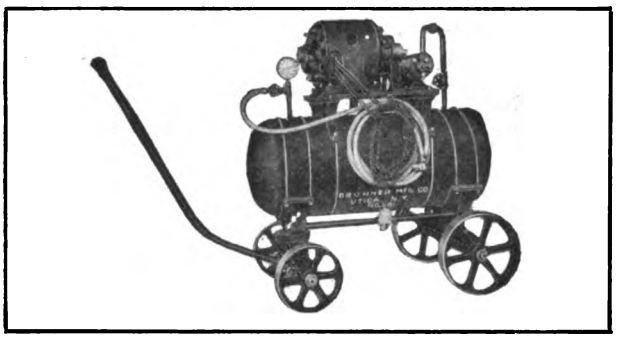
BRUNNER AIR COMPRESSORS.

Equipment for the Garage or Repair Shop, Sold for a Small Initial Cost, That Is Extremely Profitable.

The Brunner Manufacturing Company, Utica, N. Y., manufacturer of the Brunner air compressors, produces equipment that is extremely convenient for many ser-



Brunner No. 52 Portable Air Compressor.

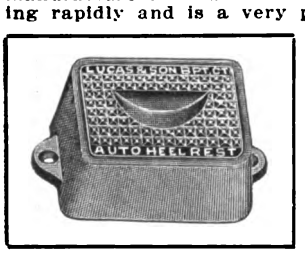
vices in garages and repair shops. The uses made of compressors are so numerous and the advantages so many that a compressor system is a necessity and not a convenience when even a few cars are kept. In every department of a shop a compressed air system is a means of saving time. Once installed the cost of operation is comparatively small.

The Brunner company, which produces air compressors in all sizes, either stationary or portable, and to meet all conditions and requirements, states that its equipment can be maintained at the average cost of two cents a year for repairs and replacements. This fact was established by an audit of the books of the company, and the record covered all Brunner machines in service, motors and accessories, for six years and seven months. Brunner workmanship and material, as well as design, are responsible for this excellent showing. Garages and repair shops contemplating the installation of air compressors, will do well to investigate the line produced by the Brunner Manufacturing Company. Details of the product will be supplied upon request.

LUCAS AUTO HEEL REST.

J. L. Lucas & Son Make an Ingenious Specialty That Adds Much to Motoring Comfort.

J. L. Lucas & Son, 40 Fox street, Bridgeport, Conn., manufacture the Auto heel rest, a specialty that is selling rapidly and is a very profitable equipment for live dealers and agents. The Auto heel rest is designed for use on all cars, and it serves equally well when operating either the brake or clutch pedals or the foot accelerator. It raises the foot to a comfortable right height and easy position, and relieves any strain at the ankle. The Lucas Auto heel rest is made of polished aluminum, and in four sizes, ½-inch, one-inch, 1½ and two inches. As may be seen from the accompanying illustration this is a simple and ornamental accessory, and can be quickly and easily attached. A postal or letter to the above address will bring to the inquirer full details of prices, trade discounts, etc., and descriptive literature.



The Auto Heel Rest.

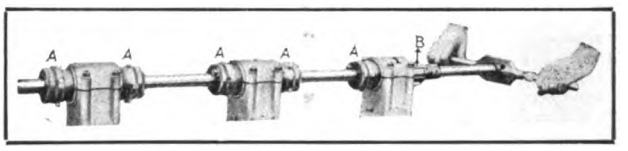
MARTELL ALIGNING REAMER.

Harding Manufacturing Company Is Producing a Thoroughly Practical Tool for Repairmen.

The Harding Manufacturing Company, South Main street, Mansfield, Mass., is making the Martell aligning reamer, a tool with which a shop can successfully compete with any facilities of large factories. Any tool obtaining more accurate results than possible with manual methods, and which economizes in time, is a profitable investment for the repairman and the service station. This applies particularly to the motor bearings. Many large factories have abandoned hand scraping crank bearings because of inaccurate results and the time consumed.

With the Martell aligning reamer the work can be done quickly and accurately, and alignment insured. One of the several advantages of the Martell aligning reamer is that it can be used on any motor. It not only produces perfect surfaces in exact alignment with each other, but makes possible the correct meshing of gears. It is equally adaptable to connecting rod and other bearings.

The supporting bushings, shown in an accompanying illustration of the Martell reamer in service, are provided with a very fine thread on the tapered portions, and screw firmly into the ends of the bearings to be reamed. They are provided with means of adjustment in any direction, the range being about .095-inch. They



Martell Aligning Reamer Fitted to a Three-Bearing Crankshaft.

also have a micrometer reading, showing the amount of "set."

The reamer consists of two heads, each carrying six adjustable blades, the range of adjustment being about .08 inch. The small head takes all sizes from 1⅝ to 1⅞ inches, and the large from two to 2¼ inches. This range is obtained by the use of six blades, which can be quickly changed.

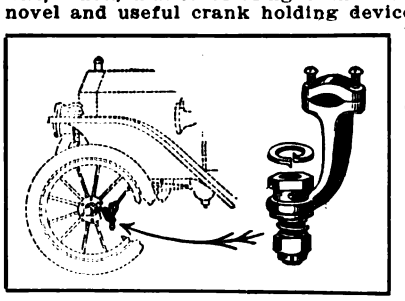
The maker states that the operation of the tool does not require an expert; a workman more or less familiar with bearings and the use of a micrometer can operate it. The Martell tool eliminates uncertainty in estimating jobs for repair work. It is as easy to ream .02 as .002-inch.

Mr. Martell, the inventor of the reamer, is a well known mechanical engineer. For several years he was the head of the experimental and testing department of the Packard Motor Car Company. He is now with the Harding Manufacturing Company as factory manager. The company issues a booklet upon bearings, which will be mailed upon request. The Harding Distributing Company, Boston, Mass., is the sole distributor.

TWO KING SPECIALTIES.

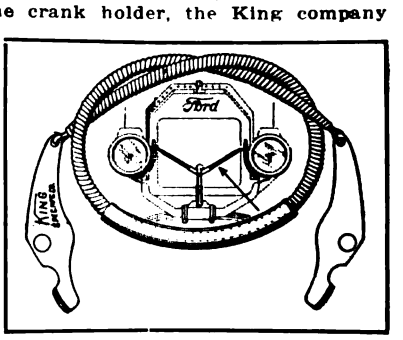
Brookline, Mass., Concern Offers Quick Selling Accessories to the Trade With Liberal Discounts.

The King Specialty Manufacturing Company, Brookline, Mass., maker of King crank holder, is producing a novel and useful crank holding device, which is meeting with ready sale. The King crank holder is stated to be a convenience for every auto owner. It holds the starting crank rigidly in an upright position. This prevents rattle of the crank, and an attachment made to the headlights minimizes vibration and breakage of bulbs. The accompanying illustration shows the manner in which the King crank holder is attached.



The King Spindle-Joint Anti-Rattler.

In addition to the crank holder, the King company is making a spindle-joint anti-rattler. This is designed to prevent rattle at the spindle joints. This anti-rattler, as may be noted from an illustration, is simple in construction and can be quickly attached without special tools. When installed no further attention is required. Statement is made that it obviates the "slap" often felt at the steering wheel. The company's selling plan is broad and liberal terms are made to dealers who desire a very profitable line. A request mentioning the Accessory & Garage Journal, will bring full information.



The King Crank Holder.

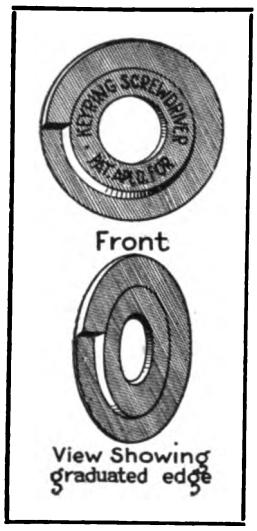
NEW POCKET SCREW DRIVER.

Philadelphia, Penn., Company Manufacturing and Marketing a Handy Pocket Screw Driver.

Hess & Son, Philadelphia, Penn., recently placed in the market a unique screw driving device that, while entirely different from standard forms, affords all the service of any ordinary screw driver, while its convenience should appeal to motorists particularly. It is disc shaped, as is shown in the accompanying illustration, and is no larger than a 25-cent piece. Its rim is of a graduated thickness, so that the tool will fit almost any screw head, thus removing the necessity of carrying around numerous bulky screw drivers to fit screws of varying sizes. Its utility is obvious, and its convenience is emphasized by the fact that it can be carried on a key ring or in the vest pocket.

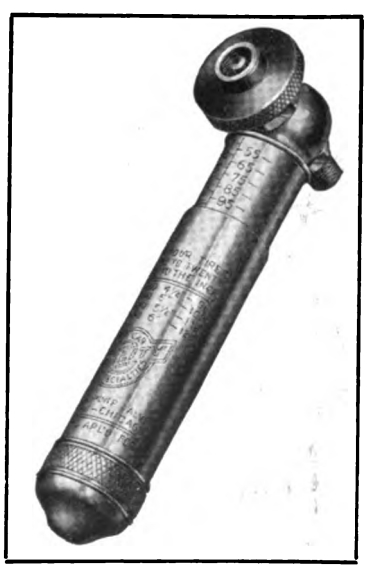


Not only is this unique device a decided convenience to the car owner, but the dealer and garage men will frequently find it of great service in working around a machine. It is not only designed for automobile work, but can be used in the home, the office and the factory in a score of different ways. Being made of tempered steel, it will withstand exceedingly great strains without the edge turning or being nicked, and it will last practically forever. Its low price makes it attractive to everyone. This handy pocket tool may be obtained at the rate of 10 cents each from the manufacturer, Hess & Son, 1031-33 Chestnut street, Philadelphia, Penn., and by mentioning the Accessory and Garage Journal when writing.

UTILITY TIRE PUMPS AND PNEU-METERS.

Hill Valve Pump Company Marketing Rapid Selling Inflaters and Automatic Protectors Against Over-Inflation.

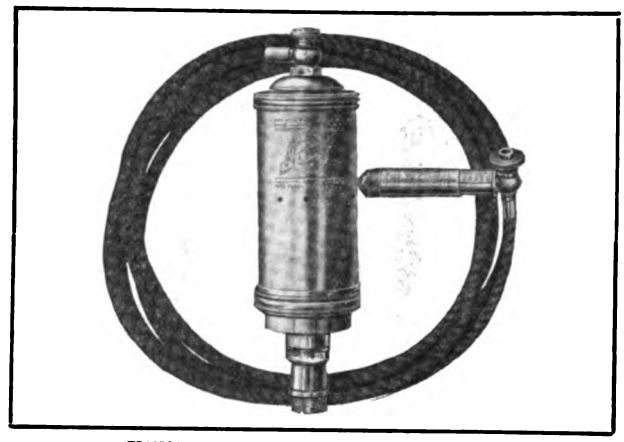
Among the products of the Hill Valve Pump Company, Chicago, Ill., that merit attention from dealers and garage men is the Utility motor-driven tire pump and the automatic Pneu-Meter, which absolutely prevents over-inflation by automatically closing the tire valve when a predetermined pressure point is reached, notifying the motorist by a shrill whistling sound. It is an equipment that immediately appeals to the car owner, and is priced to allow a liberal profit to the distributor.



Tire Inflation Controller.

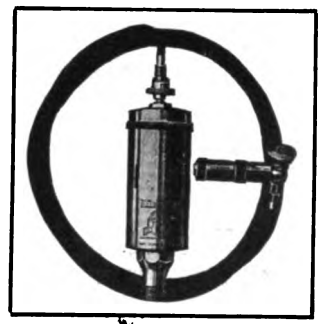
The pump is of the spark plug type, the air being forced through a flexible tube tested to 1500 pounds pressure. A large knurled nut insures easy attachment to the tire valve. The controlling device, known as the Pneu-Meter, is attached to the tube at the valve, and when the required pressure of air is obtained in the tire, it automatically closes the valve and provides an outlet for the air that is thereafter pumped. The air rushing through the outlet causes a shrill hissing or whistling noise, which is sufficiently loud to attract the attention of the motorist. A feature of the device is that though the engine is allowed to run indefinitely, no air beyond what is necessary to inflate it to the pressure set can enter the tire; thus over inflation is prevented. The Pneu-Meter is so constructed that adjustment for any required pressure can be easily and quickly made. It is provided with a table of pressures for the various sizes of tires, and a corresponding table which shows the pressure point at which the device should be set, which is quickly accomplished simply by revolving the outer sleeve of the Pneu-Meter until it clicks. It can be set from 50 to 125 pounds pressure. It can be used with any power or hand pump.

The Utility automatic tire pump unit is a compact accessory, made of polished brass, nickel, and blued steel. The Utility (large size) sells for $10. The Utility Junior (Ford size) sells at $6. The Pneu-Meter is sold in combination with the pump, but when sold separately the price is $2. The manufacturer guarantees that if it does not give satisfaction the purchase price will be refunded.



Utility Tire Pump and Pneu-Meter.

Two other products that are especially useful are the Utility socket, or jaw, wrench set, and the Utility demountable rim wrench. The first mentioned consists of a steel tube, in one end of which is carried a pair of powerful steel jaws, the other end having holes into which a lever for turning it can be inserted. Three stocks make up the set, and they will take all size and shape nuts used in auto work, from 3/16 to half an inch inclusive. They will not mutilate or round corners of nuts or bolts, not even those made of brass, and they cannot slip and bruise the fingers of the workman, the jaws having a rigid bearing on four sides. One feature is that the jaws hold the nut securely when removed, so that it cannot become lost, as frequently happens with ordinary wrenches. And the nut can be placed in the jaws and applied to bolt or screw when these are inaccessible to the hands. The set sells complete for $2.50. The demountable rim wrench combines the best features of a whole tool kit in one piece, and is small, simple and practically indestructible. It is similar to the Utility socket wrench, but is equipped with a brace stock that is foldable so as to make the wrench a compact unit, easy to carry. It sells for $1.50. Further information concerning these accessories can be obtained by addressing the Hill Valve Pump Company, 18-20 East Kinzie street, Chicago, Ill., and mentioning the Accessory and Garage Journal.



Automatic Tire Pump.

L-A STEADY STEERER.

Lockwood-Ash Motor Company Producing a Ford Car Accessory That Is Attractive to Dealers.

The Lockwood-Ash Motor Company, 511 Horton Street, Jackson, Mich., is manufacturing an equipment that "makes a Ford car walk a chalk line." This is known as the L-A steady steerer, and when attached to the car it is stated that all body sidesway is eliminated. The device is a steering rod arm that insures the car being driven in a certain course, when rounding corners, turning out to pass vehicles and when moving over rough roads. The L-A steady steerer is made in two sizes, type R fitting any standard Ford car, and type S for use with Ford cars equipped with shock absorbers, selling for $2 and $2.50 respectively. The company has a strong selling proposition and dealers interested should write immediately for prices and terms.

A petition in bankruptcy, giving assets as about $200,000, liabilities of $37,000, cash at $400, and authorized capital stock of $3,500,000, has been filed in the United States court, Trenton, N. J., by the Century Rubber Company, Plainfield, N. J. F. B. McDermott, Jersey City, was named receiver.

MIDGLEY STEEL AND RUBBER TIRES.

Lancaster, O., Company Making Composite Tread Shoes That Do Not Skid Under Any Conditions.

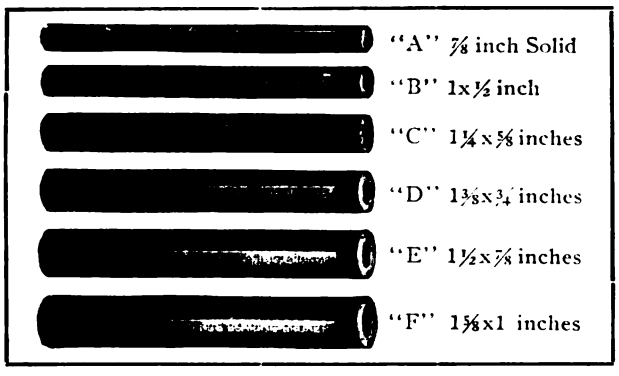
The Midgley Tire and Rubber Company, Lancaster, O., is now marketing its new wire tread tires. The company is producing a tread that will, according to its officials, obviate the use of chains on tires. The Midgley composite tread is of steel and, as may be seen from the accompanying illustration, is a studded type. The company exhibited these tires at the recent Boston show, and from the interest shown by owners and the orders received from dealers, there is belief that the tire will meet the approval of the motoring public. The company invites all dealers and distributors to write for full information. Harry Davis is president of the Midgley Tire and Rubber Company, Thomas Midgley first vice president and general manager, and Henry Plow second vice president and sales manager. A letter addressed to Sales Manager Plow will bring the inquirer complete details of the company's selling plans, territory open, trade discounts, etc. It would be well to mention the Accessory and Garage Journal when writing to Mr. Plow. The company will extend its fullest co-operation to distributors, and has made provision for liberal profits to those who handle the Midgley tires which, the company is certain, will be in big demand by owners.

Midgley Wire Tread Tire.

AMERICAN BRONZE COMPANY.

Berwyn, Penn., Company Offers a New Assortment of Non-Gran Cored Bars for Bushings.

The American Bronze Company, Berwyn Penn., is now producing for the trade of dealers and jobbers a special assortment of its Non-Gran cored bars for bushings. The sizes included will make bushings to fit any shaft diameter up to 1¼ inches. These bushing bars, six in number, are shown in the accompanying illustration, and are known as the the 6-54 assortment. By using these bars the repairman will require less stock than is now necessary with other material. The assortment is not expensive, a special price of $9.69 being made to the trade, which is 47¼ cents a pound. The company has established new low prices on standard and near-standard size Non-Gran cored bars. Through manufacturing economics Non-Gran cored bars are now sold at 52½ cents to the trade. This price is net, as the list price is 75 cents a pound. A 30 per cent discount has been made on all standard and near standard sizes, which brings the price to 52½ cents. By addressing the American Bronze Company, Department M, the dealer, jobber or repair man will receive full details of the company's stock, prices, discounts, etc.



Complete Line of Non-Gran 6-54 Cored Bars for Bushings.

How the Non-Gran 6-54 Assortment Is Shipped.

SILVEX COMPANY HELPS DEALERS.

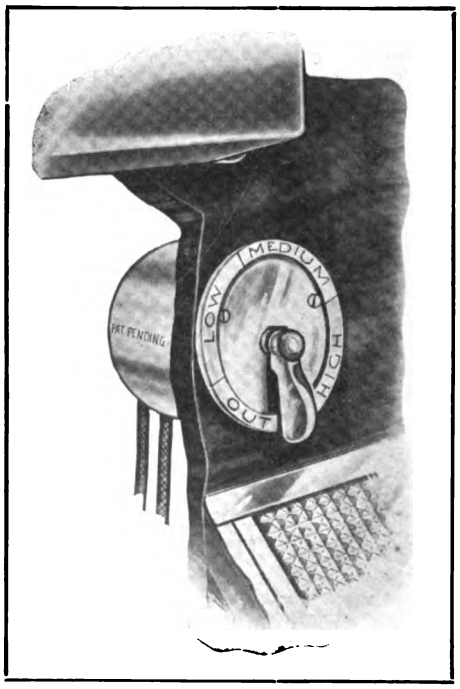
Bethlehem Spark Plug Maker Gives Fullest Co-Operation to Its Distributors.

The Silvex Company, New York City, is co-operating to the fullest measure with dealers and jobbers who handle its product. On the advertising cards that the company displays in the New York City subway, it has arranged to include the name and address of the New York Sporting Goods Company as distributors of the Bethlehem motorcycle plug, and in addition thereto gives the distributor representation on their Indian motorcycle and Smith motor wheel lines. According to Sales Manager Fischer, the Silvex Company has been a pioneer in co-operation of the most intensive character with the jobber. While the sporting goods company's case is an extreme, similar co-operation has been entered into with dealers and jobbers throughout the country. The Silvex Company has prepared a booklet fully describing and illustrating its line of Bethlehem spark plugs, which are guaranteed for the life of the car on which they are installed. By addressing the company at 171 Madison avenue, New York City, and mentioning the Accessory and Garage Journal, dealers and jobbers will receive an interesting proposition that promises large and quick returns. The company has a limited quantity of display cases for distribution, they stocking 48 plugs and six extra cores.

CHANEY HEADLIGHT DIMMER.

With It a Driver Can Regulate Electric Headlights From the Instrument Board by Controlling Lever.

The laws and ordinances requiring headlight dimming in city driving, are increasing very rapidly, and the dealer who sells a practical dimmer that can be adopted to all cars, has something worth while for the motoring world. The L. F. Chaney Company, Springfield, O., is manufacturing an automobile headlight dimmer that is claimed to answer every requirement. It is thoroughly proven, it can be installed by an owner, and it is long enduring equipment. The trade in cities prohibiting the use of glaring lights will do well to investigate the merits of the Chaney headlight dimmer shown in an accompanying illustration.



The Chaney Headlight Dimmer.

One of its desirable qualities is that with it the driver can graduate the intensity of the lights with a minimum of effort, as the control lever is located on the dash and can be operated by a touch. The Chaney dimmer is broadly guaranteed. It is moderately priced and the discount to the trade is liberal. Complete details and prices will be supplied upon request.

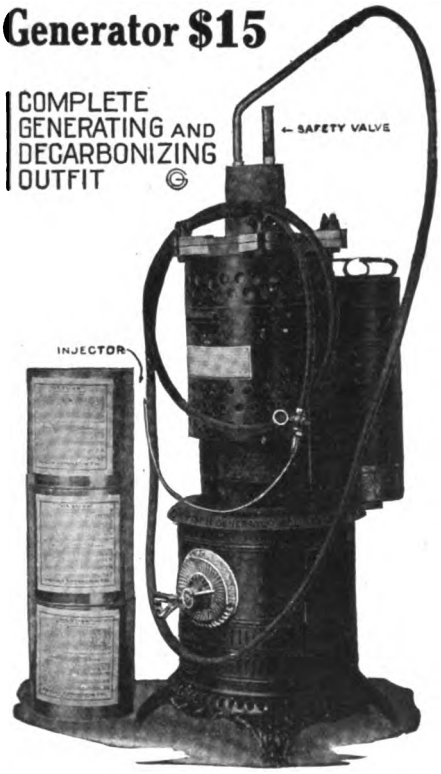
SUPERIOR LAMP MFG. CO., 136 W. 52d St. NEW YORK, U. S. A.

An Oxygen Carbon Remover and Generator $15



A generator not too large for a small garage or shop, but with capacity great enough for the largest.

Sold with complete equipment, extremely economical to operate and guaranteed in every particular.

No tanks to bother with, no delay in securing material. A practical equipment that can be operated by any one.

Carbon can be removed from any cylinder in three minutes.

Oxygen can be generated in three minutes.

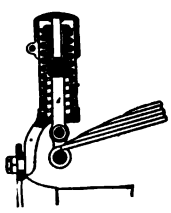
It is a time, money and labor saver.

$9 A SET OF 4 FORD "O-G" SHOCK ABSORBERS $9

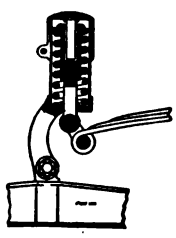
For Ford Delivery, Touring Cars and Runabouts

Adjustable when placed on the car, and automatically adjusted in service. Can be attached in fifteen minutes.

Sold with a guarantee that covers workmanship, material, finish and satisfactory service during the use of car.



The above illustration shows method of attaching to rear of Ford car. Bearings of fine material, lubricated grease cups, there can be no rattle or squeaks.



This illustration makes clear the method of attaching the front "O-G" and shows the large amount of spring action possible. By twisting the cap, the spring in the absorber is tightened or loosened, giving the necessary increase in spring tension.

Immediate refund if the "O-G" Shock Absorbers do not prove to be entirely satisfactory.

Our Jobbers and Dealers discount sheets and special circulars at request. Write today.

The Greatest Automobile Warning Signal Ever Produced ∴ ∴

Beauty, distinction, Maximum warning efficiency without offense, reliability, economy, durability —these are the qualities that make the

LIBERTY BELL

absolutely the best warning signal for automobiles ever produced. Both EYE and EAR announce the coming of the car equipped with this signal.

You couldn't buy a more satisfactory warning device for your car. Made of finest bell metal, highly polished and handsomely finished. It has the beautiful clear attention-compelling bell tone that cannot be equalled in effectiveness by any other type of signal. Must be seen and heard to be appreciated. Everyone obeys its command instinctively, yielding the right of way without being either offended or frightened.

The Liberty Bell is easy to attach and economical to operate. It uses only a small fraction of the current consumed by an electric horn and can be operated on storage battery or dry cells.

Not mere noise, but an efficient alarm that is weather-proof, trouble-proof, always ready and will last a life time. Cheapest and best from the standpoint of service and appearance.

THE LIBERTY BELL COMPANY

BRUNNER Air Compressors

ARE IDEAL TIRE REPAIR SHOP EQUIPMENT

For Practically Every Work Air Under Pressure Is Needed, and There Is the Necessity of Supplying the Customers Conveniences for Tire Inflation.

Where business and patronage depend upon the machines used, and the "BRUNNER" apparatus necessitates a very reasonable investment only, the best is within the reach of every tire repairer.

The first cost is not the real measure of economy—the actual gauge is the expense of maintenance. Judge by what others expend. For a period of six years and seven months the average repair charge of all the thousands of BRUNNER Compressors in use was

LESS THAN 2 CENTS A YEAR

That Sum Is So Small You Doubt It. But It Is the Finding of Auditors of International Repute

BRUNNER Compressors are built in vertical and horizontal types, of different capacities, for differing powers, and either stationary or portable. They may be hand or automatically regulated. The highest grade materials are used, the designs are the best that science can develop and they will endure many years.

BRUNNER Compressors are sold with a guarantee of quality and service.

At request we will give you **the name of the** nearest jobber who handles **BRUNNER Air** Compressors.

BRUNNER MANUFACTURING COMPANY, Utica, N. Y.

Does Your Ford Hold the Road?

"An ounce of prevention is worth a pound of cure."

The L-A Steady Steerer eliminates the side-sway of the body in the spring shackles of a Ford car, thereby preventing the dangers that threaten the Ford owner when travelling at a high rate of speed or driving over rough roads.

L-A Steady Steerer
FOR FORD CARS

It is a simple inconspicuous strut or radius rod which keeps the body and axle in perfect alignment under all driving conditions. Can be installed by any one in 15 minutes and lasts a life time. Makes your Ford steer and hold the road like a Packard.

Type "R" fits any standard Ford Car.....Price **$2.00**
Type "S" for use with Ford cars equipped with shock absorbers.
Price ... **$2.50**

Either of the above types will be sent prepaid with directions for installing if unobtainable at your dealers.

Dealers — Write for prices at once and be prepared to supply an immediate demand. Every Ford owner wants one.

DO NOT ECONOMIZE

By purchasing inferior oil for your car

MONOGRAM OIL

Though higher in price than some other brands, saves expenses for repairs and is more economical than cheaper grades.

MANUFACTURED BY

NEW YORK LUBRICATING OIL CO.,
Consolidated with Columbia Lubricants Co. of N. Y.
116 Broad Street NEW YORK

Stop the Blinding Headlight Glare!

The law says it must be done —blinding glare is a menace to public safety. Screens simply interpose an obstacle between the light and the street —the user pays for the full power of his headlights and gets half power. The logical solution of the problem is the

Chaney Automobile Headlight Dimmer

It enables the driver to graduate the intensity of the light. It can be changed from high to low as you would turn down an oil lamp. Operated by moving the dimmer handle, it gives complete control of the headlights from the seat. In city driving the light is kept low with small current consumption—in the country where full power is needed a touch of the handle brings back the full searchlight efficiency.

This device is practical, dependable and efficient, costs little to buy and is readily installed on any car. The average car owner can place it on his car.

Dealers: At $3.50 the Chaney Dimmer is the best value in the accessory field and a fast seller. Our liberal trade terms make your margin of profit generous. You can clean up in your territory, for the dimmer is a legal necessity, and the Chaney is the best of all dimmers, and the only one sold under a ten year guarantee.

Effective February 1

Reduction No. 3

On Goodyear Tires

Making Total Reductions 45 Per Cent in Two Years
To Give Always the Most for the Money

We are glad again—for the third time in two years—to announce a big reduction on Goodyear tires, effective February 1st.

Goodyear policy on price is to give the utmost in a tire at the lowest possible profit. Our reductions are made to that end, without ever reducing the quality.

That always means, with our matchless output, more for the money than any other maker can give.

As rubber came down our prices came down. As our output multiplied, reducing factory cost, our prices came down with it. In two years our reductions—including the present—have totaled 45 per cent.

Last year we increased our output 26.6 per cent. A few days ago the embargo on rubber was modified so that supplies seem assured. The market price for rubber seems for a time established. Fabric costs less than last year. So, under our minimum profit policy, we announce this new reduction.

Only Fair Basis

We consider profit margin on a tire the only fair price basis. We keep that margin just as low as our line allows.

While we do that, Goodyear tires will always undersell any tires that compare with them. That is because we have the largest output. We have a new factory, modernly equipped. And we have world-wide facilities for buying rubber, of our extra grade, at the lowest market price.

For a long, long time most tires have sold much above Goodyear prices. Some have sold one-third higher. A few have sold lower, as some always will, because of less rubber, less quality. But we can and do, under all conditions, give more for the money than any rival tire can offer.

The Best We Know

Goodyear Fortified Tires offer the best we know. They are built to give you the lowest cost per mile. They minimize tire trouble in five costly ways employed by no other maker. And they are always the same, regardless of price reductions.

Most tires will always sell higher, because of smaller output. Some tires will always sell lower because of lower standards. But we promise you that none will ever give better than Goodyear value.

This policy has made Goodyears the largest-selling tires in the world. It will make them more so as more men find them out.

Ask your Goodyear dealer for our new price on the size you buy.

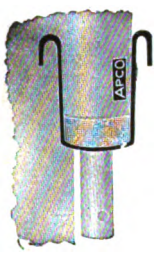
VALVE STEM PACKINGS

VALVE STEM PACKINGS.



When the valve guides on an engine wear it is impossible to get a perfect mixture as air is drawn thru the space between the valve stems and the wall of the guides. This results in a skip that is impossible to find, especial-ly at low engine speeds and full power can not be obtained from the engine, as part of the suction stroke is wasted by drawing air by the valve stems. The [redacted] pack-ing consists of a special steel stamping and felt washer which is held in position by valve spring as shown in cut. When in position the felt both prevents air from entering the cylinders and also lubricates the valve stem preventing further wear. They are necessary on the new cars as well as old, and the installation in either case is a matter of a very few minutes without tools of any kind.

Price per set of Eight 50c.

WALDEN WORCESTER WRENCHES

Are you selling wrenches

BUILT TO USE,

Or others merely made to sell?

ALL ORIGINAL DESIGNS

WALDEN - WORCESTER GUARANTEED QUALITY TOOLS

The first wrench ever offered for use on brake and reverse bands, designed with a knowledge of clearance around the nuts.

The peculiar shape of the handle is to allow for full working space.

50¢ EA

New design, all steel tool. Bar handle swivels on cone bearing. Pins are hardened steel and socket shaped to fit valve head—a real tool.

30¢ EA

Most useful single wrench for Ford Cars. Cylinder Head Bolts, rear axle nuts and housing, water intake pipes and sundry other places. Sockets are shaped to allow full clearance.

38¢ EA

Original Designs

Original Designs

35¢ EA

It will fit any rod in practically any position without removing the engine from the car. The first and only wrench on the market today which will accomplish this purpose.

There are many nuts and bolts on the Ford Car which with ordinary wrenches are very inaccessible, causing much loss of time when making adjustments or repairs. These tools are designed and tested under practical service conditions and greatly simplify the work, saving much time and annoyance. The tools are built to meet hardest service conditions and are fully guaranteed. Every Ford owner and garage needs these tools.

35¢ EA

Sizes are 9/16 and 3/4 in., to fit main bearings and engine base bolts and other parts. Most desirable tool for your Ford equipment.

DESIGNED AND PROVEN FOR EFFICIENCY AND SERVICE.

A NEW BIG VALUE IN SERVICE WRENCHES FOR FORD CAR

In other words, are you using our goods to not only make a profit for yourself and build up a permanent business (with patrons who will stick to you because of the quality of your merchandise) or have you been deceived by the lure of a little more profit, into selling "something just as good." Remember that being lured into doing that kind of business invariably turns out to be a loss, for you drive away your patronage and are left with an inferior stock.

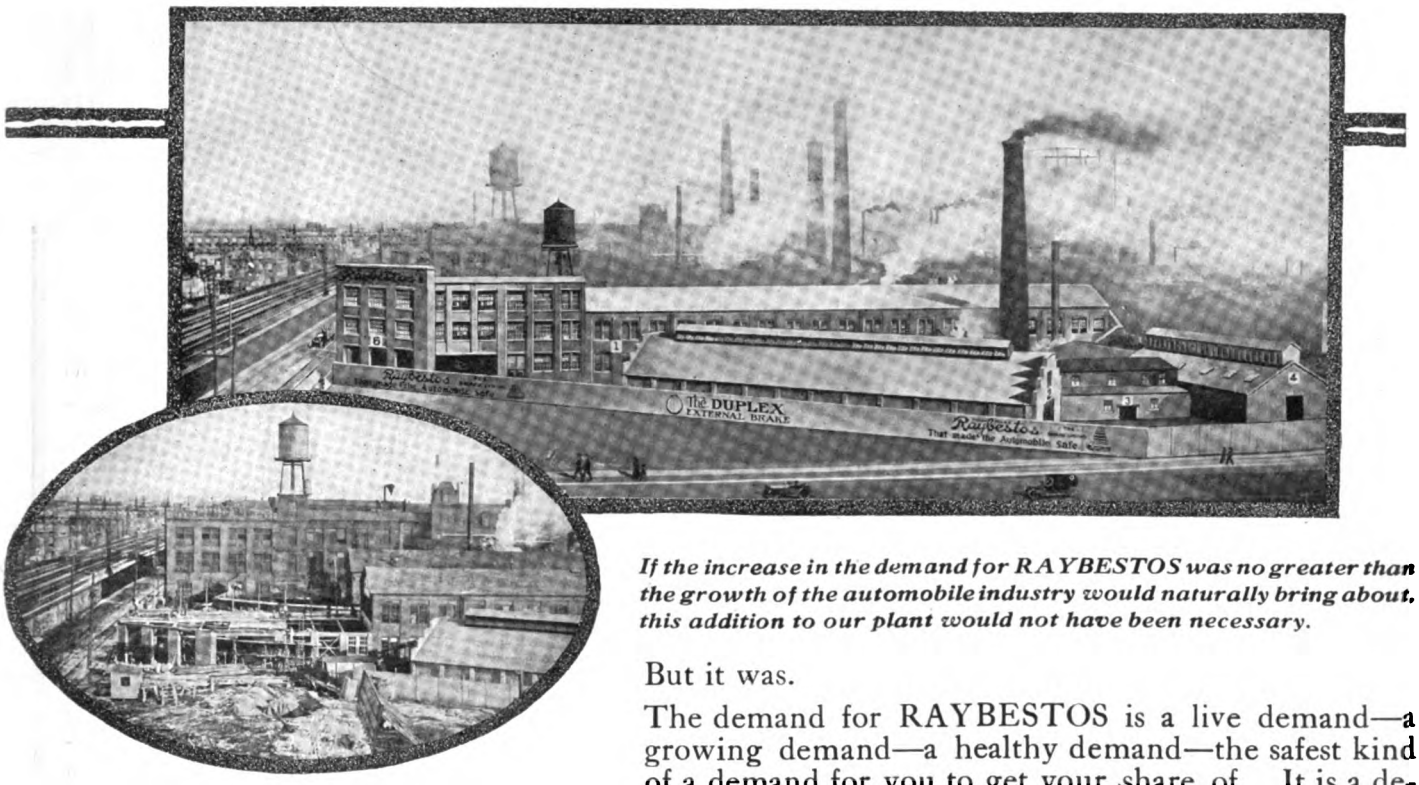
The Quality of Raybestos Will Increase Your Business the Same as it has Ours



If the increase in the demand for RAYBESTOS was no greater than the growth of the automobile industry would naturally bring about, this addition to our plant would not have been necessary.

We have just completea an addition to our main factory building which gives us a total floor space of 65,000 square feet—facilities which if housed under one roof, would mean a 5-story building, 260 feet long and 50 feet wide.

Here RAYBESTOS is woven, treated, trademarked and prepared for shipment —to the majority of automobile manufacturers as original brake equipment and to nearly one hundred of the leading jobbers in various centers for distribution through the trade for replacements.

But it was.

The demand for RAYBESTOS is a live demand—a growing demand—a healthy demand—the safest kind of a demand for you to get your share of. It is a demand brought about by the quality of RAYBESTOS and nourished by the relative superiority of its service.

Merit established RAYBESTOS—merit built up the demand for it—and because its intrinsic merit has increased steadily with the passing years, the demand for it has grown—in face of competition—to such an extent that the name

TRADE MARK **Raybestos** REG. U.S. PAT. OFF.

"THE ORIGINAL AND BEST ASBESTOS BRAKE LINING"

is the term universally applied to good brake lining.

Merit did this—not sharp merchandising practice.

This increase in our manufacturing facilities means more to you than the fact that a new building has been built.

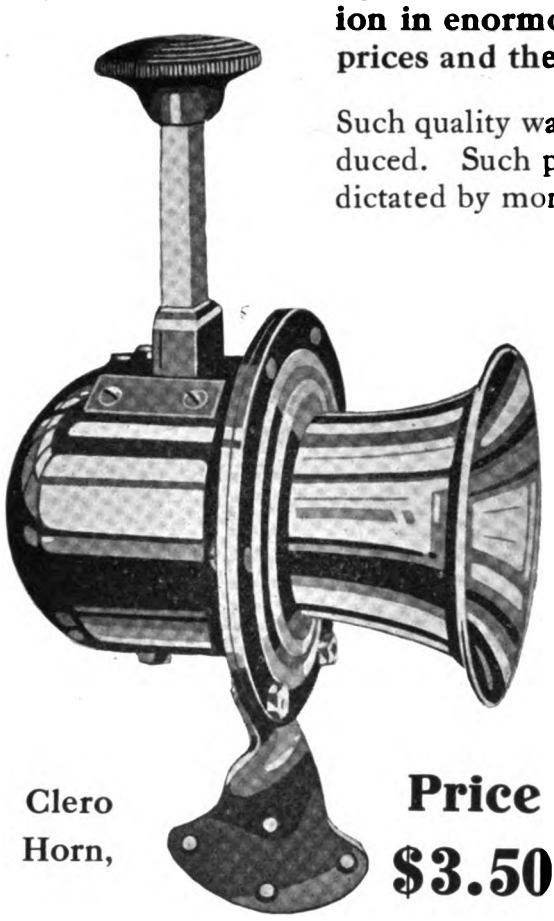
$3.50 CLERO HORNS $4.00

THE BEST HAND-OPERATED MECHANICAL WARNING SIGNALS EVER PRODUCED.

Not cheap because the price is lowest. CLERO HORNS are superior in quality to all other horns, because unequalled manufacturing facilities and production in enormous quantities has made possible minimum prices and the finest of materials, workmanship and finish.

Such quality was unheard of until CLERO HORNS were produced. Such prices were undreamed of. Other horn prices were dictated by monopolistic control of patent rights.



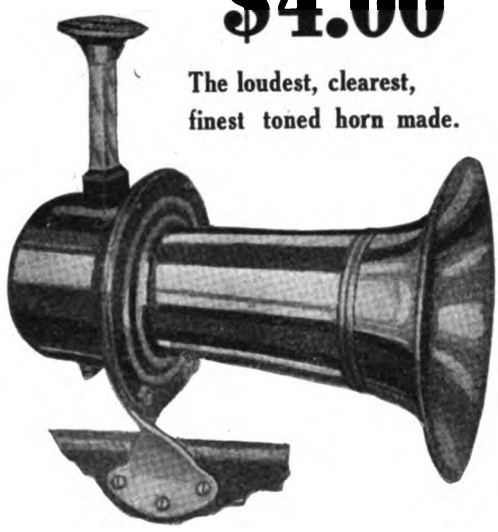
Clero Horn, **Price $3.50**

BIG CLERO PROFITS FOR YOU EVERY DAY

Clero Long Projector Horn

$4.00

The loudest, clearest, finest toned horn made.



Mr. Dealer, Now's the Chance

Your profits depend upon the volume of business you do, not on the number of sales. There's a wide margin on CLERO HORNS, their distribution is being promoted the nation over, and the demand is already extremely large.

CLERO HORN QUALITY is right, CLERO HORN PRICES are right, CLERO HORN PROFITS are right. These three factors are irresistible in business. Mr. Dealer, if you fail to grasp the opportunity, the loss is yours. Your business is what you make it. Are you a business builder? Full information for the asking.

THE TRADE'S BEST SELLERS

Five Widely Known Motoring Utilities, a Necessity in Every Garage and Car, That Will Economize Operating Expense and Increase and Improve Vehicle Service.

$10

Utility Pump, Complete with Whistling Pneu-Meter.

The only automatic, practical and positive power tire pump, operative from a spark plug opening by the motor, adaptable to any car. Any pressure can be obtained. Can be attached instantly, is always ready when needed, and is easily carried in a car. Built of high grade material and will endure for years. It cannot fail and cannot wear. With it tire protection and economy is certain.

As necessary as fuel and sold for prices within the reach of every motorist.

$6

Utility Junior Pump, Complete with Whistling Pneu-Meter.

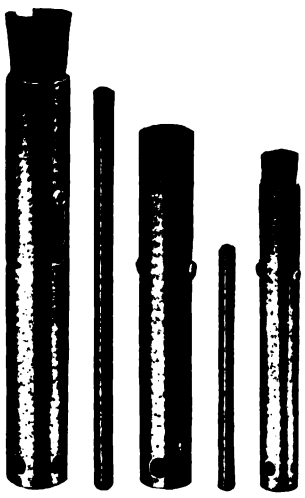
Equally serviceable as the larger pump, but with a range from 40 to 80 pounds it is designed for Fords and similar light cars having tires to 3 1-2 inches diameter. The most practical equipment ever offered to motorists.

$2

Utility Whistling Pneu-Meter.

A pressure gauge that sounds a shrill whistle when the pressure at which it is set is reached when inflating tires. Range from 50 to 120 pounds by five-pound units. The air by-passes when the pressure is reached. It is a safety valve and prevents over-inflation. It can be used with any pump, and is sold separate.

The Utility pumps and the Whistling Pneu-Meter are superior to all other tire pumps or protective devices. They have been proven in the use of thousands of motorists and never fail to satisfy in any instance.



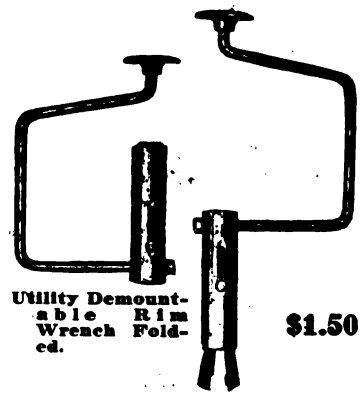
Utility Socket Wrench Set, Complete, $2.50.

Utility Socket Wrench Set

A set of three jawed socket wrenches that are instantly adjustable and will take all nuts that a set of 14 sockets will fit; fits all sizes and shapes used on motor cars; either square, hex, cock or wing, and holds the nut after it has been removed. It can be used to set nuts in places inaccessible to the hands. Will take all sizes from 3-16 to 1-2 inch inclusive. Is packed in a canvas bag.

Utility Demountable Rim Wrench

Designed for removing the nuts of all demountable rims, this instantly adjustable wrench has many uses. The wrench can be used with both hands, for it holds the nut firmly until it is released. It operates as does a bit brace and can exert great pressure. It can be folded and carried in the tool box.



Utility Demountable Rim Wrench Folded.

$1.50

Utility Demountable Rim Wrench.

DEALERS; The Utility pumps, Whistling Pneu-Meter and the wrenches are so manifestly superior that they sell at sight. They are in demand the entire year, and they are bought by all car owners who know their economy and service value. Full information supplied all correspondents.

YOU NEED THIS WATERHOUSE

Because it is a money maker.
With it, broken auto parts are made as good as new at a far less cost than new parts.
You should have it in your business because it is a PROFIT PRODUCER.

YOU SHOULD HAVE THIS WATERHOUSE

Now here is how you can get it.
Just order it
And if after it comes you find that you do not want it send it back and the deal is off.

But you will be tickled to death with it because it gives you more value for your money than any other equipment on the market. The man who does things is the man who gets there. Order a WATERHOUSE and get the welding business of your community.

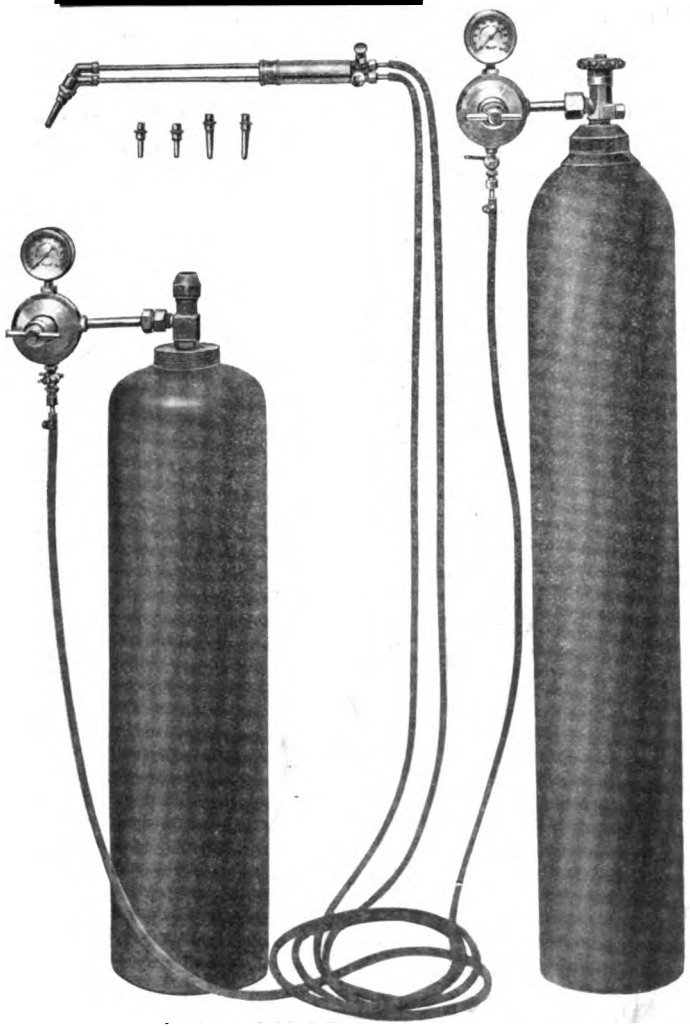
WHAT YOU GET

THE WATERHOUSE OUTFIT	Value
1 B Welding Torch with 5 tips	$17.00
1 Oxygen Reducing Valve with 50-lb. line pressure gauge	10.25
1 Acetylene Reducing Valve with 50-lb. line pressure gauge	11.00
1 Set of Special Welding Hose (20 ft.)	3.00
1 Pair of Welding Glasses	.75
1 Carbon Burning Torch	Free
1 Set Instructions	Free
Net Cost Complete	**$42.00**

If you have a regulator for carbon burning, the oxygen regulator with the outfit is unnecessary, and you can deduct the price ($10.25), from the above total price.

HOW YOU PAY

5 per cent. discount for cash with order or C. O. D. shipment, or $20.00 with order, balance in two payments; first of $12.00 in thirty days, second of $10.00 in 60 days.



WATERHOUSE WELDING CO.

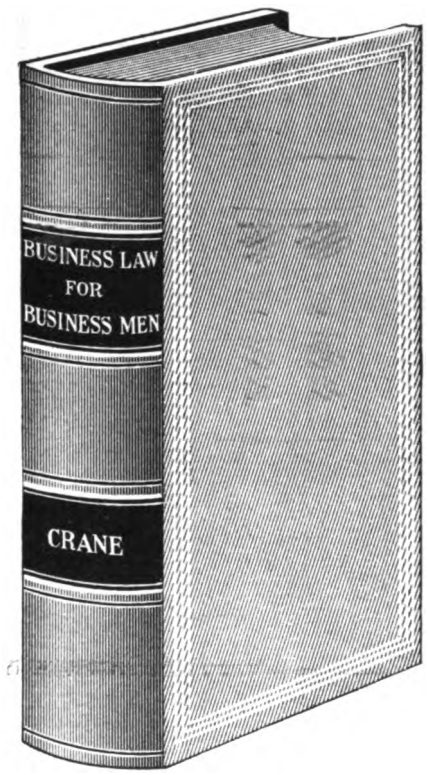
THIS SILENT PARTNER CAN ALWAYS TELL YOU
Stop Taking Chances---Stop Making Mistakes

The one practical, always available and ever useful book for Garagemen, Repairmen, Dealers in Cars, Agents and Accessory Men.

"BUSINESS LAW FOR BUSINESS MEN"



Is a work of this kind. It is prepared especially for the busy business man. It is the only work of like purpose that is free from technical language. It applies to every state in the Union; it is down-to-date in every particular; it serves silently as Counsellor: never makes mistakes; and never asks a fee.

The legal forms should be in the possession of every trade interest.

Its contents comprise the following departments: Contracts, Partnerships, Corporations, Negotiable Instruments, Real Estate and Conveyancing, Bankruptcy, Insurance, Common Carriers, Patents, Banks and Banking, Trade Marks, Copyrights, Sales, Domestic Relations, Business Crimes, Building and Loan Associations, Architects and Builders, Money, Executors and Administrators, Constitutional Law, each with its numerous sub-divisions. It also contains the latest and most improved legal forms, including Contracts, Powers of Attorney, Wills, Deeds, Assignments, Leases, etc., etc.

"BUSINESS LAW FOR BUSINESS MEN" comprises over 600 pages. It is bound in a specially prepared law buckram that is made to stand the government tests for a material that will outwear leather, with leather labels on back stamped in gold. Size 6½x9¼ inches.

LAW ADVICE FOR A LIFETIME—IT COSTS YOU BUT THE POSTAGE. With one year's subscription to the Accessory and Garage Journal this book is given free. The cost to automobile industrial interests only is $2.15. The regular price for "Business Law for Business Men" is $3.50. A year's subscription to the Accessory and Garage Journal is $2. A $5.50 book and magazine value for $2.15.

The Big Way to Advertise in the Month of May When All in the Trade Are Buying.

No Advertising Magic—

JUST FACTS

When business men knew very little about advertising the old time advertising men used to talk to them a lot about "Advertising Magic." Whatever that may have been it went out of style long ago.

You are now, doubtless, sending out many catalogues every month, direct-by-mail folders, and using trade directory space and space in automobile journals which cover some part of the trade. It is difficult for you to estimate how many people you are reaching, but perhaps you can make a rough guess. Then figure how much it costs you every month.

Analyze these definite figures showing how much wider distribution, how much more service, INDEED, HOW ABSOLUTELY COMPLETE A SERVICE we offer you at a fraction of the cost.

The May issue of the Accessory and Garage Journal mailed on or about May 25th will reach 14,594 men who operate garages; 1553 who operate repair shops; 1100 who conduct accessory and supply stores; 400 who do a jobbing business in automobile supplies; 390 hardware dealers who conduct wholesale automobile supply departments; 15,567 who deal in vehicles; and 698 who conduct the leading automobile businesses in Canada.

This includes all Ford dealers and all of those who sell Ford accessories and equipment. There is a distinct section in each issue of the Accessory and Garage Journal given over to advertisers of Ford parts, equipment, accessories, etc.

The Trade Will Read and Keep This Number

In it will be published for the first time in any motoring paper complete detailed mechanical specifications of every pleasure and commercial car produced in America, names and addresses of makers, models, body types, parts used, equipment and prices.

Car Data That You All Must Have

These are facts that every man in the trade wants always within arm's reach—that he needs to refer to every day in the year. It will be a trade directory in itself in addition to being a live trade magazine with a dozen departments that the dealer or his salesmen use constantly. You will want to keep it for your own use.

One page, $60; Half page, $36; Quarter page, $24; Eighth page, $14

Page size 7 1-2 by 10 inches. Two columns to page.

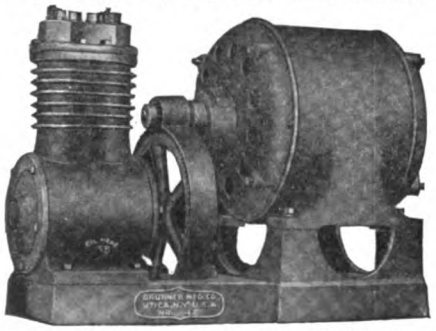
BRUNNER AIR COMPRESSORS

SAVE TIME AND LABOR IN THE PRIVATE GARAGE

Economy is an important factor in the administration of any business enterprise. The highest quality equipment is not extravagance, for it insures efficiency and satisfaction.

BRUNNER Air Compressors are the best machines of the kind that are built. They are designed and constructed to careful engineering principles and from high grade materials. There is no purpose that cannot be served by a BRUNNER machine, either stationary or portable, horizontal or vertical, for any power and of any capacity, and with hand or automatic regulation.



No. 42 Double Cylinder, Vertical.

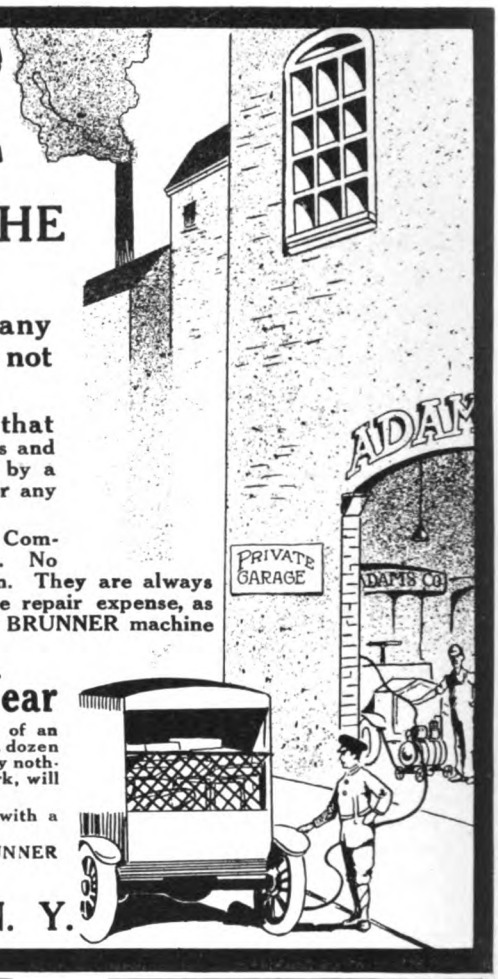
After the first cost, BRUNNER Compressors have no upkeep expense. No attention is needed but lubrication. They are always ready, always dependable, and the repair expense, as shown by an audit covering every BRUNNER machine in service for 79 months averaged

Less Than 2c a Year

A BRUNNER Compressor is the equal of an extra man in a garage storing more than a dozen vehicles. The actual money saving, to say nothing of the convenience and the better work, will pay for the installation in a short time.

BRUNNER COMPRESSORS are sold with a guarantee of positive satisfaction.

There's a jobber who handles the BRUNNER line near you. Write us for his address.



BRUNNER MANUFACTURING CO., Utica, N. Y.

THE FAST SELLING JENSEN LEVER TIRE PUMP

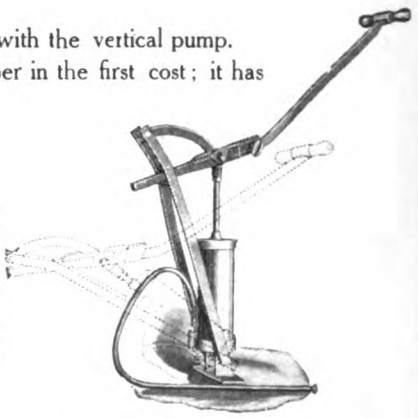
Will do four times more work than any other pump with one-fourth the effort.

It is a fulcrum pump—the leverage multiplies the operator's strength.

It will pump against ninety pounds pressure easier than against sixty-five pounds with the vertical pump.

It is more convenient and dependable than an engine driven pump. It is cheaper in the first cost; it has equal speed.

A boy or woman can easily operate it. Compact and will fit any tool box.



Sigourney, Ia., Oct. 29, 1914.

W. H. HOWELL CO., Geneva, Ill.

Gentlemen—We do not see how any one thought of making the pump, but now since it is made we must say that it is by far the best thing in its line that we have ever seen. The piston is sufficiently large to be substantially made. It is just as simple as can be, yet is made in a way to be the easiest to operate. We have tested these pumps out to a pressure of over 300 pounds per square inch with no leak past the piston, and must say that this was done just as easy as pumping up to ordinary pressure with any other pump.

We do not say the Jensen is the best pump because we sell it, but we are selling it to dealers in Iowa because we know it is the best.

Yours truly,

FRIDAY MACHINERY & SUPPLY CO.

By R. J. Friday, Gen. Mgr.

THE ACCESSORY -AND- GARAGE JOURNAL

Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. IV. PAWTUCKET, R. I., APRIL, 1915. No. 12

ACCESSORY MAKERS WORK NIGHT AND DAY.

Reports from Plants Throughout the Country Indicate that the Prosperity of the Car Builders is Shared by Parts Makers.

THE automobile industry is experiencing the greatest wave of prosperity that it has ever known. Coincident with the reports of great gains in business from such car manufacturers as the Ford Company, the Willys-Overland, the Studebaker corporation and others, are the statements that the parts and accessory manufacturers throughout the country are sharing in the greatly increased volume of business.

Detroit, Mich., is generally considered a barometer of the industry. It is said that many of the accessory manufacturers there, as well as in other industrial centres, are being pressed so hard by the car manufacturers for their products that they have been obliged to curtail their promises for deliveries in June and July. However, they will, in some way best known to themselves, be able to meet all demands, as they have in the past.

One method has already been adopted, and that is to work the plants on day and night shifts, and by adding machinery and buildings to the plants. The Continental Motor Company is stated to have more than 2300 men at work in its Detroit and Muskegon works, and is turning out 325 engines every day by working the forces through day and night. The company's business has increased 25 per cent. since the corresponding period of last year.

World's Largest Axle Maker.

Probably one of the busiest of the parts makers is the Timken roller bearing and axle concern. This company has been taking over allied plants, one of the latest being the Metal Products Company's plant, where axles are being made in extraordinary quantities for several car manufacturers. Other new factory buildings are being added to the plant, one of which is nearing completion and will be used for the manufacture of David Brown worm gear axles. The affiliated companies of Timken-Detroit Axle Company and the Timken-David Brown Company have been running day and night for the past three months. Further building, some of which structures will be erected on property that the company owns in Detroit, and other additions, the whole of which will involve $750,000, will make the Timken interests the largest axle producers in the work, it is said. At present there are more than 2500 men on the payrolls, a great many of them working overtime and several departments running on a 24-hour schedule.

The Zenith Carburetor Company has been extending itself for some time in the effort to keep pace with the demand for its product, which demand is said to have increased 50 per cent. in the last six months. This plant also is working a night shift, and carries 90 men in its working force. The Zenith company foresaw such possibilities and erected a modern structure with plenty of provisions for expansion. Increase of facilities is now in progress and consists of adding new and modern machinery, which is expected to raise the present output of 200 carburetors a day.

Working Day and Night.

Among the steering gear manufacturers, the Gemmer Manufacturing Company is far exceeding its previous production records. The company has booked more than 20 per cent. more orders for its equipments than it had on its books last spring, and is keeping its 350 to 400 employees exceedingly busy. The machinery departments are kept working on night shifts, and thus the company is able to produce between 360 and 400 complete steering gears, including the steering wheel, etc., every day.

Another motor builder, the Massnick-Phipps Company, manufacturer of Perkins motors, is reporting exceptional increase in business. A short time ago the company took over the plant of the Wahl Motor Car Company, which brings the total floor space for the company up to 60,000 square feet. The company is employing at present a third more men than ever before, making the number of the present force about 350 men. The force is not only working in two 10-hour shifts, but is also working Sundays. The company is turning out about 50 engines daily, 75 per cent. of them being eight-cylinder. Business has increased 100 per cent. over last year.

The Long Manufacturing Company is turning out about 175 radiators a day, and is striving to increase this schedule to 250 daily to meet the demand. More than 5000 feet of additional floor space is now being added to the plant for general manufacturing and enamelling ovens. Night and day work has been the rule in the Vanguard company for some time, and the company is producing more than 1000 windshields a day. Indicative of the increased fortunes of the Vanguard company is the fact that the working force has been doubled in the past 12 months.

Detroit newspapers are publishing a large amount of help wanted advertising for the various Detroit motor car and parts companies. They require men who have worked on automobile construction and know the special machines and special operations thoroughly. This shortage of competent men is felt in Detroit nearly every year at about this time, but as business is on a much larger scale this year than is usual the demand is larger than ever. Those who are bidding for men range from small plants employing 100 men to large ones in which many thousands work.

MANUFACTURER TALKS TO DEALERS.

In a "Heart-to-Heart" Talk, the Maker of the Stutz Cars Gives Pertinent Facts About Selling Cars and the Proper Maintenance of Stores.

There are many who are willing to give advice to the novice in automobile selling business, but it is seldom that the motor car manufacturer, who no doubt has an excellent opportunity to analyze conditions, can come in direct contact with dealers and give them the benefit of their suggestions. The following "heart-to-heart" talk comes from the manufacturer of the Stutz automobile, the Stutz Motor Car Company, Indianapolis, Ind. It is couched in pithy and pertinent statements and queries, which the reader can answer to himself, and probably benefit greatly thereby. The statement is as follows:

Realize first that the selling of motor cars is a regular business and not a game, a "gamble."

The successful seller of motor cars must be a merchant using systematic business methods to sell his merchandise.

No "happy-go-lucky" or "hit-or-miss" method can possibly succeed now.

The same methods, the same conservation, the same hard work and the keeping eternally at it, that have made for success in other lines, are equally applicable to the sale of motor cars.

Have you the necessary capital to insure your success? If you have not, it is better that you never enter the business, as under the circumstances your venture is foredoomed to failure.

If you have the necessary capital, the next thing in order is to get the right company to represent. Here it is well for you to remember the fact that the right company will always build the right car.

When you have the right company, stick to it, not for a few months, or a year, but as long as you are in the business. Don't build up a paying business by spending your money and by hard work, only to lose all you have gained by taking up some "fly-by-night" proposition that apparently promises a little discount, or for other reasons that momentarily appeal to you. The longer you are identified with a certain product, whether it is motor cars or something else, the greater will be your return, if you work. The most requisite things to remember in picking the factory you are to represent are that it is financially strong beyond question of doubt, and that the product is beyond question. Why not get a special agency rating on the people with whom you are about to do business?

Concentrate your efforts and keep eternally at it. This is the day of success for the one idea man, the specialist.

Don't blame your failure on the factory you represent. The success of the factory is yours also. Notice the most sought after cars on the market today and you will find they are the ones that give the greatest value for the price.

A manufacturer of this sort does not have to give extra discounts to induce trade, because he cannot do so and keep up his quality. And, while speaking of discounts, did you ever think why the manufacturer of motor cars gives the large discount he does? No? For profit of the dealer and for service to the owners who purchase the manufacturer's cars. This is why the manufacturer, the reliable one, has a right to demand that owners receive proper service.

Have you ever stopped to think that a factory willing to consign cars to agents does so from necessity—because they must do everything and anything to sell their cars? A good substantial company doesn't have to do this kind of business.

Don't grab off all the territory you can get just because in some cases the factory grants same. You cannot work it, and you know you cannot. Why ask it? You tie up territory, because the factory stands by its contract, and you do not work it, which is of no benefit to yourself (excepting a few floating orders that may be forthcoming) and at the same time you prevent the factory from getting business therefrom. Why not be honest and face the matter squarely, asking for only what you can readily care for?

Do you ever say to yourself: Have I conducted this business in a business-like way, making every sale stand by itself, and show its own profit? Some dealers think of and talk about the automobile business as a "game." Why should it be different from any other business? Why not use the same common business sense that has been successful in other lines of merchandizing?

What about the salesman? Why not take a good, honest, young man and teach him your methods; provided he has, in addition to natural ability to sell cars, the one great fundamental of success, that of "staying on the job?" The day of general jollification is past. Application now counts most.

How does your salesroom look? Pretty good? Why not have it clean and neat and inviting? It counts. Sometimes ladies come to look at cars, and a slovenly-looking show room does not appeal to them and frequently spoils a prospective sale. Keep your repair shop away from your show room. No really fine dealer mixes up his dirty shop with his show room. Its bad for business. Think about it.

How do you demonstrate your cars? By pulling off some particular "stunt" that some competitor does, just because he does it? Did you ever think that most "stunts" are the things that the car is not intended to do, and is seldom if ever required to do in actual service? This being the case, why do it? It can do the car no good, and it proves nothing. Why not, therefore, give a dignified, smooth demonstration, such as the car is usually called upon for in service?

Have you ever stopped to think that a car is never "sold," excepting at full price? Order taking by meeting the other fellow's idea is not "selling" your merchandise. "Selling" a car is making a prospect want what you have to sell, no matter what the price is. Isn't that right?

What do you do about trading the used car? Do you make "wild-cat" trades? Just to meet those of your competitor, or what you are told your competitor is doing? Don't you know that if half the trades you hear about were made as they are reported to you, that the man making them would have gone broke long ago? Don't let what the other fellow does influence you. Make your own trades on a business-like basis and let it go at that. You trade for profit; if you cannot make it you are better without the business.

PENN DEALERS FIGHT MOTOR BILL.

Taxation on a Basis of Horsepower Would Greatly Increase Cost of Licenses.

Automobile dealers throughout Pennsylvania are helping in a hard fight against a bill introduced into the legislature by Representative Lipschutz of Philadelphia, which would base automobile taxes on the horsepower and practically double the fees which have been paid in the past. Under this law the proposed rate for pleasure cars under 20 horsepower would be $10, as compared to the present rate of $5; for cars from 20 to 35-horsepower, $20, as against $10; 35 to 50, $30, against $15, and more than 50-horsepower, $40, in place of $20. Rates are also doubled on solid tire vehicles, trailers and dealers' cars.

ANNUAL MEETING OF DIXON COMPANY.

At Annual Meeting of the Joseph Dixon Crucible Company, the Board of Directors Was Re-Elected.

The annual meeting of the stockholders of the Joseph Dixon Crucible Company, Jersey City, N. J., was held at the company's office, April 19, and the vote recorded was the largest ever represented at an annual meeting in its history. Out of a possible 20,000 votes, 19,519 shares were recorded. The stockholders attested their general satisfaction with the present management by re-electing the board of directors, which consists of George T. Smith, R. E. Jennings, George E. Long, E. L. Young, William G. Bumsted, J. H. Schermerhorn and Harry Dailey. The officers for the coming year include the four directors named, Mr. Smith, president; Mr. Long, vice president; Mr. Schermerhorn, treasurer; Harry Dailey, secretary. Albert Norris is the assistant secretary and assistant treasurer.

George W. Dunham, formerly second vice president and consulting engineer of the Chalmers Motor Company, Detroit, Mich., has resigned to devote his energies and experience in the capacity of an independent consulting engineer, along lines similar to those in which he has been prominently engaged during the last 10 or 15 years. C. C. Hinkley, chief engineer of the Chalmers company, will continue in that position and will also assume the responsibilities of the position held by Mr. Dunham. As one of his first clients, Mr. Dunham has secured the Chalmers company, two others have also made arrangements for a portion of his time, while four other companies are considering the retention of his services.

GENERAL NEWS OF THE INDUSTRY.

Will Exceed Production Limit Set by Rebate Plan—600 Cars a Day to be Overland Schedule—Jeffery Cuts Prices.

TO ENABLE small automobile manufacturers to compete with large concerns in price, the Pontiac Chassis Company, Pontiac, Mich., has been organized. Instead of making parts for sale to someone else to assemble, the company makes a complete chassis, to which the customer gives a name and supplies tires, bodies and equipment. In this way it is figured the company will be able to buy parts as cheaply as the large manufacturer, retain a margin of profit for itself and still be able to supply the finished chassis to automobile companies at a lower price than they could assemble them from parts bought in small lots.

The incorporators of this unique concern are R. A. Palmer of Pontiac, formerly general manager of the Cartercar and Oakland companies; Robert Perkins, secretary of Massnick-Phipps Company, Detroit, makers of four and eight-cylinder motors, and H. H. Brooks, former sales manager of the Marathon Motor Works of Nashville, Tenn., and later connected with the Herff-Brooks company. The capitalization is $100,000.

A chassis has been designed and is being produced in the plant of the defunct Flanders Manufacturing Company. It has a 25-horsepower engine of the Perkins-Phipps make, with a bore of 3¼ and stroke of 4½ inches. The chassis throughout is of the conventional design. Wheelbase is 106 inches. Choice is offered as to ignition, either Atwater-Kent or magneto being available, and the chassis may be had with or without starting and lighting equipment. Wheels may be 30 by three, or 28 by three. Several other chassis may be designed and offered if the selling policy proves to be successful.

BELGIANS START U. S. PLANT.

Dover, N. J., Chosen as Site for Factory That Will Employ 200 People.

The International Peace Brotherhood, a Belgian organization, with offices at The Hague, has secured a site for an automobile plant at Dover, N. J. Two hundred men will be employed and by the terms of the agreement the undertaking must continue in operation for 20 years. In addition to automobiles, the new company will make marine motors, aluminum castings and pressed and spun wares.

FORD'S PRODUCTION TO REACH 325,000 CARS.

Indications Now Are That the Ford Company Will Reach More Than 300,000 Cars—Buyers' Rebates to Be Paid

All records for the production of automobiles have been broken frequently by the Ford Motor Company. The high mark for a day's production is 2096 cars, reached on March 17. On many days more than 2000 were produced.

Commercial Manager Hawkins, after a trip around the country to study conditions, declared that a million Fords could be sold this year if they could be turned out, but that production will probably reach about 325,000. This will assure the repayment to buyers of about $15,000,000 in rebates which were promised if the year's business amounted to 300,000 cars, manufactured and sold.

Of the 2096 cars which made up the big day's production, 1300 were produced at the Detroit plant, where 16,000 men are now employed. The remainder were assembled in the various assembly plants about the country. The production of the Canadian plant for March was 3000 cars. Hours in this plant have been cut to eight a day, and a minimum wage of 50 cents an hour established. This is an increase of 15 to 60 per cent. over the wages formerly paid.

At the Top Is a General View of the Ford Plant and Below May Be Seen a Part of the Ford Army of Employees.

OVERLAND TO BUILD 600 CARS DAILY.

Factory Additions, Which Will Be Complete by June 1, Make Big Production Possible.

John N. Willys has announced that additions to the Toledo plant of the Overland company will make it possible to produce 600 cars daily after June 1. Just now the company is building 300 cars a day and selling as many as it can make. This represents a 30 per cent. increase over last year's business. President Willys thinks that the increase for 1916 will be 100 per cent. and he hopes to be able to turn out 600 cars a day throughout the fiscal year.

MADISON MOTORS IS INCORPORATED.

Concern with Plants at Anderson, Ind., Will Produce Six-Cylinder Car with Reutenber Motor.

The Madison Motors Company, which owns plants at Anderson, Ind., has been incorporated for $500,000. The principal stockholder is C. E. Gibson, former treasurer of the Gibson Automobile Company, Indianapolis. Associated with him as directors are W. E. Moore and O. R. Ewing. At present the company will concentrate on a six-cylinder car with a Reutenber motor, but a four-cylinder machine has been designed and will shortly be placed on the market.

PACKARD ADOPTS DYNAMOMETER TEST.

General Manager Alvan Macauley Puts $40,000 Into Equipment for Testing Packard Motors.

The human element in testing motors for passenger cars and trucks will be largely eliminated at the Packard factory in the future by an elaborate system of wattmeters and dynamometers, which have recently been installed. Each new motor, to limber it up, is now run on

Digitized by Google

a belt with a wattmeter attached to show just the amount of power required to operate it when it has been limbered to the point where it will run with the amount of power that is normal, a dynamometer is attached and it is run under its own power. When all adjustments have been satisfactorily made they are sealed and are not touched again until the car or truck is delivered to the purchaser. These instruments show within a fraction of an ounce the amount of power that is developed. They are much more exact and in spite of the cost of the equipment Manager Macauley feels that the more certain results will be well worth the outlay.

General Manager Alvan Macauley, Packard Motor Car Company.

The new equipment greatly reduces the amount of road testing required. No attention need be given the motor in the final test and attention can be concentrated on other parts of the chassis.

AUSTIN-CADILLAC INJUNCTION MODIFIED.

Cadillac Is Given Right to Repair and Resell Cars in Which the Two-Speed Rear Axle Is Used.

The injunction secured by the Austin Automobile Company, Grand Rapids, Mich., preventing the Cadillac company from using a two-speed rear axle, which was judged to have infringed the Austin patents, has been modified by the United States court of appeals in Cincinnati so that the Cadillac company can repair, resell and use axles made on that plan. This makes it possible to continue its business in regard to the cars made and sold last year. The two-speed axle is not part of the Cadillac design at present.

LOZIER TAKES OVER SERVICE STATIONS.

Lozier Company Takes Over Service Stations of Harry Houpt, Inc., in New York and Philadelphia.

The new Lozier organization is to market its product in New York and Philadelphia through the branch system, and for that purpose the officers of the company, Theodore Friedeberg, president; Charles Shongood, vice president, and Harry Frank, treasurer, have taken over the plants of Harry Houpt, Inc., in New York City and Philadelphia, installed a sales and service force and begun business. The San Francisco branch will be managed by G. A. and J. L. McPherson of Detroit.

"ORPHAN CAR" PARTS NOW OBTAINABLE.

Rare Bargains in Repair and Service Parts for Cars Not Now Being Manufactured.

The recent purchase of the assets of the Speedwell Motor Car Company by the Puritan Machine Company, Detroit, Mich., has emphasized the fact that service and repair parts of automobiles and commercial vehicles the manufacturers of which have since gone out of business, can be obtained at a cost said to be at least one-third the cost of manufacture. The Speedwell purchase marked the 61st company whose assets were bought by the Puritan Machine Company, and that company now carries a stock of over 1,300,000 different parts and accessories for motor cars and trucks. In addition to buying up defunct companies, the Puritan company also purchases the surplus stocks of manufacturers and consequently has practically all parts for all cars. Among the "orphan cars" and others for which parts can be supplied, are the Speedwell, Warren, Everett, Marquette, Ranier, De Luxe, Michigan, F. A. L., Reliable, Dayton, Welch, Wayne, Northern, Marion, Carter H., Henderson, Auhut, Elmore, Barnes, Cutting, Grabowsky, Abbott-Detroit, Demot and other makes. The complete list of cars and parts and their prices is given in a bulletin which is free to any one who addresses the company at No. 41 10th street, Detroit, Mich., and mentions the Accessory and Garage Journal.

DEALERS FIGHT FIRE DEPARTMENT.

New York Association Starts Campaign to Have More Satisfactory Regulations Adopted.

The Automobile Dealers' Association of New York City has a struggle on with the New York fire department. It has decided to go before the board of aldermen to make a strong fight on regulation for garages which were recently announced. The trouble with the present arrangement, according to R. H. Johnson, president of the dealers' association, is that it leaves too much to the discretion of the fire commissioner, so that dealers do not know exactly where they stand. The dealers have drawn up a set of regulations and submitted them for consideration. Several dealers protest against the regulations that require them to handle their gasoline as though it were nitroglycerine.

MEETING OF MICHIGAN GARAGE MEN.

Important Convention of Michigan Garage Men to Be Held at Detroit on May 22.

Under the auspices of the Detroit Garage and Station Operators, incorporated last August under the laws of Michigan, the garagemen representing about 70 of the higher class garages of the state, will assemble in convention at the Hotel Statler, Detroit, Mich., May 22. The purpose of the convention, it is said, is to organize a state association, affiliated with the Associated Garages of America, and to raise the standard of the garage business, to secure better legislation, and also to insure the mutual protection of the garage men and the public. Present indications are that the convention will be a record affair. Robert Bland, president, and E. J. McQuirk, secretary of the national association, will be present, as will H. E. Halbert, president of the Chicago association; W. D. Taylor, president of the Illinois association; F. E. Avery, president of the Columbus association, and several other distinguished guests. Two prominent Detroiters who will be present are L. C. Steers and F. A. Bean, first vice president and treasurer respectively of the national association.

PREMIER'S PRODUCTION MANAGER.

New England Man Takes Charges of Factory Production for the Premier Motor Manufacturing Company.

The designing and manufacturing ideas which Stanley Whitworth, factory production manager for the Premier Motor Manufacturing Company, Indianapolis, Ind., has brought to the company were gained in a measure in Rhode Island, where he served his apprenticeship in the city of Providence. It is stated that Mr. Whitworth is largely responsible for the company's turning out one of the best products in its history, and has much to do with the general advancement of the plant.

Mr. Whitworth, who was raised in Providence, has had several valuable and responsible connections with automobile manufacturing and engineering. He has been associated with such men as Fred Moscovitz of the Marmon Motor Car Company; Chester Griswold, consulting engineer for the Franklin Manufacturing Company; Orlando Weber, vice president of the Partin-Palmer Company, and others. He was also connected with the manufacturing end of the Overland, Waverly electric and the underslung American cars, advancing until he now holds a very important position.

Stanley Whitworth, Premier Manager.

JEFFERY CUTS FOUR-CYLINDER PRICE.

Large Business in All Parts of the World Makes It Possible to Sell for $1150, Announcement States.

The Thomas B. Jeffery Company, Kenosha, Wis., has announced that increased production of its four-cylinder car, which was priced originally at $1450, has made it possible to cut the price to $1150. The working force at the factory has been increased by 500 men and the plant is now running 24 hours a day.

AUTOCAR REDUCES CHASSIS PRICE.

Light Truck Formerly Sold for $1850 Can Now Be Bought for $1650—Increased Production the Cause.

Demands for the Autocar have grown to a point where a very large increase in production will be necessary for the next year. This has made cheaper production and distribution possible and, accordingly the Autocar company has announced a reduction of $200 in the price of its chassis. The Autocar is now used by 2400 firms in many diverse lines of business.

CHALMERS TO BUILD $1400 SIX.

New Chalmers Model Priced $250 Lower Than Light Six Which Is Now Being Sold.

Announcement has been made by the Chalmers Company that it will market during the coming season a "Six-40," priced at $1400. The exact details regarding the car have not yet been announced, but it is to follow closely the lines of the "Six-40," which has been marketed this year for $1650.

PAIGE-DETROIT INCREASES DIVIDENDS.

Return to Stockholders Raised from Four to Seven Per Cent. a Month—18 Men Benefit.

The Paige-Detroit Motor Car Company, Detroit, Mich., which has only 18 stockholders and is capitalized at $250,000, has raised its monthly dividend rate from four to seven per cent. The stock has a par value of $100, but the last sale was made at 325. The company's net earnings for the year are about $750,000, leaving half a million for surplus after 100 per cent. annual dividends have been paid.

PAYMENTS TO LOZIER CREDITORS.

Voiturette Company Creditors Also Receive Dividends on the Amounts Due to Them.

The Detroit Trust Company, receivers for the Lozier Motor Company and the American Voiturette Company, have paid dividends of five per cent. to the Lozier creditors and of 10 per cent. to those of the Voiturette company. The total amount of the Lozier dividend was $50,000. One more payment is due the Voiturette creditors.

SEPARATE COMPANY SELLS USED CARS.

C. T. Silver, Overland and Peerless Dealer, Tries New Method of Disposing of Traded-in Stock Cars.

The Rodney K. Haynes Company has been organized in New York for the purpose of disposing of used cars taken in trade by the C. T. Silver Motor Company. The new venture will be directed by Rodney K. Haynes and F. M. Simons, both of whom are widely experienced in the New York City second-hand car field.

"THE GREATEST OF ALL TESTIMONIALS."

Bosch Distributing Poster Bearing Signatures of Racing Drivers Who Indorse Its Magneto.

Collectors of signatures of the famous, as well as users of Bosch magnetos, will appreciate the beautiful poster which the Bosch Magneto Company, 223 West 46th street, New York City, is distributing throughout the trade. It contains facsimile signatures of 32 of the leading racing drivers who use Bosch magnetos on their cars, they having signed a general letter indorsing the product. The poster consists of an enlarged letter head in white set in a background of yellow, which is bordered with red and black. It also presents the winner and time of the races of 1914 and the first quarter of 1915, in which the Bosch magneto figured as part of the winning car. The company states, "We will be glad to forward one to any of your subscribers who may be interested in securing a copy."

MEETING OF DONELLY CREDITORS.

Referee in Bankruptcy Names May 6 as Day of Hearing Claims Against Estate.

The assignor, attorneys for assignee, and attorneys for petitioning creditors in the case of the Donelly Motor Equipment Company, Inc., petitioned the court for a hearing, which has been granted and set for May 6, when allowances for services rendered the estate of the above-named bankrupt will be heard before Seaman Miller, special master referee in bankruptcy, at No. 2 Rector street, New York City.

STUDEBAKER ANTICIPATING BONDS.

Large Earnings of the Corporation During Last Few Months Make It Possible to Take up Bonds.

Bonds issued by the Studebaker Corporation, Detroit, Mich., are being anticipated from the exceptionally large earnings of the company during the past few months. Of the $400,000 worth that fall due in May, 75 per cent. are said to have been taken up, as well as a considerable proportion of those maturing March, 1916. The company is said to have added $20,000,000 gross to its business because of war orders. The Locomobile Company of America, Bridgeport, Conn., is also in the market for its own bonds, having offered 105 for 10-year sinking fund bonds maturing later than June 1 of this year.

DEEDS TAKES MANAGEMENT OF DELCO.

Former Vice President and Assistant General Manager of National Cash Register Takes Charge of Delco.

E. A. Deeds, formerly vice president and assistant general manager of the National Cash Register Company, has taken charge of the Dayton Engineering Laboratories, of which he is president, and will act in the capacity of general manager. This company is the maker of Delco starters and other well known products. C. F. Kettering, vice president and until recently general manager of the company, will in the future devote his attention more especially to the engineering and production departments of the business. The production of the company will be nearly doubled when the construction of a large new concrete factory now under way is completed.

KING'S BIG SHIPMENT OF EIGHTS.

King Motor Car Company Ships Trainload of Eight-Cylinder Cars Valued at $100,000.

Interest in eight-cylinder cars was stimulated by the announcement that the King Motor Car Company, Detroit, Mich., recently made a trainload shipment of its eight-cylinder cars, valued in the aggregate at about $100,000, to the King distributors at Chicago, R. J. Morgan and C. F. Woods. Accompanying this announcement was the statement that the company is taxed to its capacity to fill orders. On the arrival of the King eights at Chicago they were piloted through the Loop district under their own power by men and women operators. The King company is one of the pioneers in the eight-cylinder field.

B. F. GOODRICH ENLARGES.

Company Puts Up New Building Valued at $500,000—Great Plant Is Now Running Night and Day.

On land recently purchased on the old canal in the rear of its present plant, the B. F. Goodrich Company, Akron, O., is beginning the construction of a large new building which will cost $500,000 when it is completed. The company will employ several hundred additional men. The present plant is now running at full capacity.

The Hupp Motor Car Company, Detroit, Mich., has established a warehouse at Boston, Mass., from which it will handle direct its wholesale sales in the New England territory. The Wentworth-Fosdick Company, which formerly had control of the wholesale, will take charge of the retail business of the district. The new branch will make quick service possible, which will appeal to the New England dealers.

William P. Herbert, president of the Philadelphia Automobile Trade Association, was one of the guests of honor at the annual dinner of the association held at the Hotel Adelphia, Philadelphia, Penn., recently. James E. Gomery, treasurer, and E. C. Johnson, Ralph Coole and E. B. Johnson were the other principal guests. The banquet was attended by about 150 members of the association.

Percy F. Todd, Detroit, has been appointed chief draftsman for the King Motor Car Company. He is a graduate of the mechanical engineering department of the Ohio State University of 1906. Mr. Todd succeeds C. E. Jacobs, who has been appointed chief inspector for the King Company.

factory representative for the Scripps-Booth Company. He is now in Naples, Italy, and will tour the continent in one of the latest models of the Scripps-Booth, deliveries of which are now starting.

L. B. Berger, Detroit, has been placed in charge of sales of the Lozier Motor Company. He was with the Willys-Overland Company when the Willys-Knight car was manufactured in the Garford plant in Elyria, after which he joined the sales forces of the Toledo company, from which position he was called to Detroit to take up his present work.

Fred I. Huntington, Cleveland, has been appointed city sales manager for the Seidner-Merritt Company. He was formerly connected with the Cuyahoga Sales Company.

F. S. Komp, Brooklyn, N. Y., has been appointed head of the Lansden Automobile Company, manufacturer of electrically propelled vehicles. He was formerly manager of the Lehigh Valley Structural Steel Company.

L. E. Kennedy, Burlington, Wis., has returned to his former home to engage in business. He was formerly secretary, treasurer and general manager of the Western Brass Company.

Charles H. John, Milwaukee, has been elected first vice president of the Milwaukee Metal Trades and Founders' Association. He was formerly president and general manager of the Wisconsin Motor Manufacturing Company.

Albert R. Hasen, Boston, Mass., has joined the selling force of the Reed-Crockett Company. He was formerly with the Oldsmobile Company in that city.

B. A. Simpson, Omaha, Neb., has been appointed manager of the Apperson Jack Rabbit Automobile Company. He was for six years associated with the Buick agency.

Ray Hockaday, Hutchinson, Kan., will be the manager of the Hockaday Automobile Supply Company.

Flashlight View of a Portion of the Banquet Room Where the Philadelphia Automobile Trade Association Assembled for Its Annual Dinner—About 150 Members Gathered at the Board.

E. H. Wagner, Indianapolis, has become secretary and treasurer of the E. M. Owens Sales Company, distributor for the Detroiter.

J. B. Siegfried, Detroit, has been appointed production manager and superintendent of purchases. He was formerly purchasing agent for the King Motor Car Company.

John L. Prewitt, East Orange, N. J., has resigned his position as sales manager for J. W. Mason to open a wholesale and retail automobile supply store, to be known as the Essex Auto Supply, at 453 Main street.

A. M. Russell, Detroit, Mich., formerly with the Lippard-Stewart Company, recently joined the sales force of the Signal Motor Truck Company as district manager and has been covering the states of Iowa, Illinois and Minnesota since March 1.

William A. Somerville, Detroit, is now associated with the Ralston Printing Company. He was former advertising manager of the Rapid Motor Vehicle Company, Pontiac, and later was with the Stromberg Motor Devices Company, Chicago.

Fred Cousins, Clintonville, Wis., has become eastern sales manager of the Four Wheel Drive Company, having charge of the New York and New England states. He was formerly with the Peerless company.

Roy D. Chapin, Detroit, is at present on a visit to the Pacific coast. The visit will be strictly in the nature of a vacation tour, including a stay at the two "fair" cities, San Francisco and San Diego, Cal. He is president of the Hudson Motor Car Company.

George Desautels, Syracuse, N. Y., has been appointed representative in the western territory for the Hammond Steel and Forging Company. Before taking up this new connection Mr. Desautels was sales representative of the Anderson Drop Forge Company.

Hildaire J. Holder, Detroit, has been made European

Frank S. Sims, Detroit, has been appointed advertising manager of the Timken-Detroit Axle Company, succeeding E. A. Walton, resigned. He was formerly assistant advertising manager of that company.

Eugene L. Caton, Worcester, Mass., has joined the sales forces of the Norcross Automobile Company. He was for some time connected with the Hudson agency in that city. He is also president of the Worcester Automobile Dealers' Association.

Jay A. Mellish, New York City, has become identified with the Harrolds Motor Car Company. He was for several years manager of the exchange car department of the Locomobile Company of America.

J. M. Quinn, Pittsburg, Penn., has been appointed manager of the local branch of the Goodyear Tire and Rubber Company.

G. S. Loomis, Louisville, Ky., has been appointed manager of the Southern Motors Company and W. F. Winklemann has become sales manager. They were formerly connected with the Packard interests in Detroit.

A. Warren Cahill, Milwaukee, has become associated with the Jesse A. Smith Auto Company. He was formerly connected with the Wells-Fargo and Western express companies at Waukesha, Wis.

E. P. Kempff, Harrisburg, Penn., is in charge of the newly established branch of the Fisk Rubber Company in that city. He was formerly with the Front Market Motor Supply Company and is well known to the industry.

L. D. Robertson, Detroit, has been appointed manager of the new factory branch of the Packard Motor Car Company, recently opened at the plant on East Grand boulevard.

H. F. Campbell, Indianapolis, treasurer of the Stutz Motor Car Company, has been elected treasurer of the Columbia Club of that city.

Digitized by Google

INDUSTRIAL HAPPENINGS AND COMMENT.

The Sommer Motor Company, Bucyrus, O., has sent to its preferred stockholders checks for 3½ per cent., which is half of the sum due as dividends on the stock for 1913 and 1914. An announcement sent with the checks states that it is expected that another dividend will be paid July 1, 1915. The company is working a full day and half night shift.

The Velie Motor Vehicle Company, Moline, Ill., manufacturer of the Velie Light "Six," report a most prosperous outlook for the coming season. George H. Lloyd, sales manager of the company, advises that more orders are on the books now than ever before at this season of the year, and that the feeling of depression which has apparently existed in the outlying territories heretofore is being rapidly dispelled by the approach of spring.

The United States Rubber Company, New York City, shows net sales of $83,678,812, the first report since the company changed its fiscal year to correspond with the calendar year. The company has made an increase of about $4,850,000 over last year, in plants and properties, expending about $2,100,000 in 1914 on the company's rubber plantations in Sumatra. Many other improvements were also made.

The Standard Welding Company, Cleveland, O., has added 79 men to the working force in its rim department. Officials of the company report that manufacturers are ordering up to specifications. The added working force will bring more than normal the production of rims by this company.

The Pullman Motor Car Company, York, Penn., is being operated to its fullest capacity. The increased business is due to the orders for the Pullman Junior, the new model placed on the market this season. Shipments are being made daily.

The Hans Motor Equipment Company, La Crosse, Wis., has been reestablished on a sound basis and is operating at the largest capacity yet attained by the plant. During last week about 25 additional workmen were employed and if the present rush of orders is maintained the force will be still further increased. The company manufactures gasoline and oil gauges, pumps and other small equipment which is used by the leading car builders of the country.

The Republic Rubber Company, Alma, Mich., has received an order from the Anglo-American Export Company, London, England, for 300 trucks to be delivered this year.

The Haywood Tire and Equipment Company, Indianapolis, Ind., has acquired the building adjoining its present location on North Capitol avenue and is fitting it up for immediate occupancy. The building will give the company 10,000 square feet of floor space, which was made necessary by the increased demand for Haywood vulcanizers.

The Goodyear Tire and Rubber Company, Akron, O., has been taking active co-operation with its dealers in displaying their Goodyear tires to the best advantage. The company supplies the dealers with seasonable displays for their windows, one of which is reproduced on this page, which is made up of accessories as well as Goodyear tires.

The B. F. Goodrich Company, Akron, O., held its annual meeting of stockholders recently. The officers elected are: President, B. G. Work; secretary, S. B. Raymond; treasurer, W. A. Means. The number of directors was reduced from 16 to 14. The stockholders voted in favor of reducing the capital stock of the company from $90,000,000 to $88,000,000, by reducing the authorized preferred capital stock from $30,000,000 to $28,000,000.

The Vacuum Oil Company, Rochester, N. Y., held its annual meeting recently and the following directors were elected: C. M. Everest, Edward Prizer, G. P. Whaley, C. E. Bedford, C. C. Campbell, W. M. McGee, C. E. Arnott and R. W. Everest.

The Goodyear Tire and Rubber Company, Bowmanville, Ont., is doubling the capacity of its plant. The increased output will materially effect the cost of production and the consumer will reap the benefit by a reduction in price.

The Puritan Machine Company, Detroit, Mich., has bought large quantities of the assets of the Krit Motor Sales Company. The company will continue the manufacture of parts for the Krit and will also build a limited number of complete cars. This makes something like 60 different makes of cars, no longer manufactured, for which the Puritan Machine Company furnishes parts.

The American Pattern Works, Detroit, Mich., has increased its capital stock from $10,000 to $50,000. Joseph F. Buhr has been elected president, William Blank vice president and Edward Stephens secretary. The concern manufactures the Gemmer-Detroit starter for Ford cars.

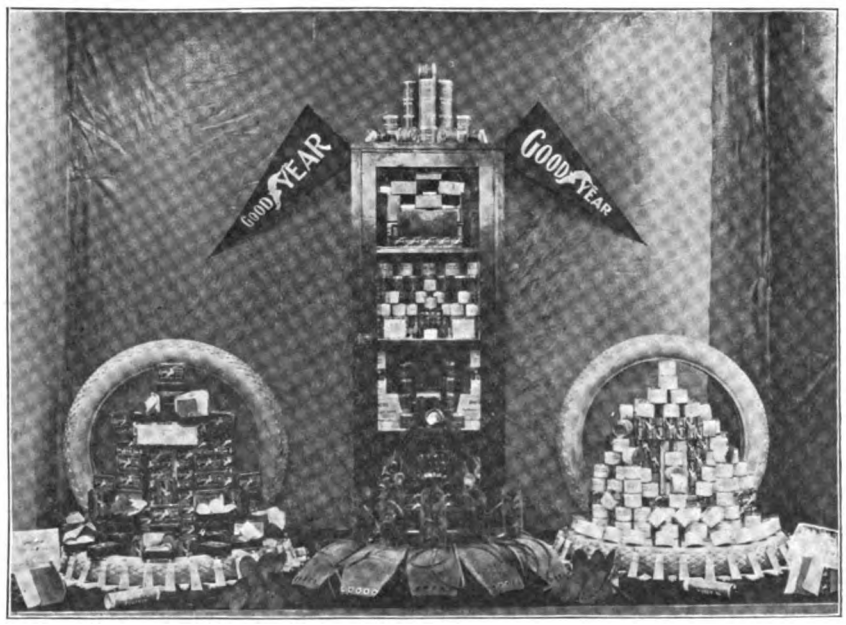
The Kellogg Manufacturing Company, Rochester, N. Y., maker of the famous No. 101 All-Metal, Engine Driven Tire Pump, with attachments for over 30 cars, reports that the company is working day and night shifts to take care of the increasing orders.

The Thomas B. Jeffery Company, Kenosha, Wis., has orders for 1150 trucks for delivery all over the world. Over one-half of these are light delivery vehicles and the others are 1½-ton trucks and the famous Jeffery Quads, which drive, brake and steer on all four wheels.

Robert L. Morton, Harrisburg, Penn., sailed recently for London. He represents the Morton Truck Tractor Company and will endeavor to secure contracts for the allied armies. Mr. Morton is an efficiency expert of the four-wheel drive, which is the type of truck produced by the Morton company.

The Kentucky Revive Battery Company, Louisville, Ky., has taken a large factory at Ninth and Jefferson streets for a daily capacity of rechargeable dry storage batteries valued at $1000.

The Columbiana Rubber Company, East Liverpool, O., has been sold to a syndicate of capitalists from Mansfield, O., at a price which has not been made public. The appraised value of the plant is $85,000. It has a capacity of 400 motor car tires daily. The plant will resume operations in a few weeks.



Window Display Design Supplied to Dealers by the Goodyear Tire and Rubber Company.

The Troy Wagon Works Company, Troy, O., has commenced building a new motor truck trailer works which will cover 16,800 square feet of ground and will enable the firm to turn out more than 60 trailers weekly.

The Studebaker Corporation, Detroit, Mich., is erecting a steel stamping and enamelling plant at West Jefferson and Clark avenues. The structure will be four stories high, 220 by 80 feet, and will have 70,000 square feet of floor space, at an approximate cost of $85,000.

The Remy Electric Company, Anderson, Ind., held its annual meeting recently. Officers were elected as follows: President, Stoughton A. Fletcher; vice president, Hervey Bates, Jr.; secretary and treasurer, H. W. Griffith. The officers and Theodore Stempfel compose the board of directors.

The General Motors Company, Detroit, Mich., has produced and sold 20 per cent. more of its cars than for the same period of last year. The company has $13,500,000 cash in the treasury, which is 40 per cent. more than a year ago.

The Chase Motor Truck Company, Syracuse, N. Y., has decided that the company will not accept any more orders for motor trucks to be shipped to the nations at war.

The Federal Motor Truck Company, Detroit, Mich., is operating full capacity and reports an increase of business of 25 per cent. during the first two months of this year as compared with January and February of 1914. The company employs 200 to 250 men.

The Nyberg Automobile Company, Anderson, Ind., is

Digitized by Google

making arrangements to reopen its plant, which has been closed for several months. It is reported that a light, popular priced car is to be manufactured.

The Elbert Motor Car Company, Sunnyvale, Cal., has arranged to purchase the Goldy plant, where Elbert light cars will be manufactured. The Elbert company is operating a plant in Seattle. The new factory will enable the company to manufacture almost all of the entire car. It occupies 20 acres of ground. Six buildings, with a total ground space of 40,000 square feet, have already been erected.

The Detroit Foundry Company, Detroit, Mich., was destroyed by fire of unknown origin. The blaze started in the stock room on the first floor. The loss to the building, machinery, etc., was about $100,000. The plant was the property of the American Motor Castings Company, makers of gray iron castings.

The Pyrene Manufacturing Company, Indianapolis, Ind., has opened a sales branch at 345 North Capitol avenue. A. C. Jones, formerly manager of the Dayton, O., branch, has become manager for Indiana.

The W. H. Mullins Company, Salem, O., manufacturer of automobile parts and bodies, has purchased a lot north of the present plant, upon which a large addition to the plant will be erected. The present plant has been in operation for four years.

The Ford Motor Company, Detroit, Mich., through the head of the sociological department, John R. Lee, states that the Ford plant is now employing 20,000 men of all nationalities. A year ago 55 per cent. of them had no knowledge of the English language. Today there are established classes where they are taught English. John R. Lee also states that since the profit-sharing plan went into effect accidents have decreased 54 per cent.

The Paige-Detroit Motor Car Company, Detroit, Mich., had an increase of 61 per cent. in the sales during January and February, 1915, as compared with January and February, 1914.

The Atwater Kent Manufacturing Works, Philadelphia, Penn., announces that the month of February was a banner month, the number of ignition systems shipped being more than 100 per cent. greater than the output of February, 1914. The present schedule for 1915 deliveries on Atwater Kent ignition equipment called for 80,000 systems, with the probability of a very heavy increase. An addition to the plant has just been completed to take care of the growing business.

The Steel Products Company, Cleveland, O., has just completed an addition to its main plant. The officers of the company are: President and general manager, C. E. Thompson; vice president and superintendent, W. D. Bartlett; secretary and sales manager, J. A. Krider, and treasurer, G. H. Brown.

The Victor Rubber Company, Springfield, O., contemplates the erection of an addition to its plant.

The Frost Manufacturing Company, Kenosha, Wis., is manufacturing the "Brad-Kent" carburetors for Ford cars. It is absolutely automatic in its operation, insofar as the amount of air to gasoline is concerned. It has no cams, springs or other delicate mechanism to be thrown out of adjustment by vibration. This carburetor saves time and gives more power, speed, economy and flexibility.

The Falls Rubber Company, Cuyahoga Falls, O., has purchased a site on Main and Broad streets. The company will erect an up-to-date factory.

The Regal Automobile Company, Berlin, Ont., is making an addition to its factory, which will be fully equipped. This company is a direct branch of the Detroit concern.

The Red Arrow Automobile Company, Orange, Mass., has awarded the contract for a fireproof factory, which will be used for the manufacture of automobiles. The building will be modernly equipped.

The United States Wheel and Tire Company, Rockton, Wis., will erect a plant, 100 by 110 feet, of brick, steel and concrete construction, to be equipped for the manufacture of elastic wheels for automobiles and commercial trucks. It will be 2½ stories in height. The company is capitalized at $300,000 and E. S. Gleasman is the president.

The West Bend Aluminum Company, West Bend, Wis., contemplates the erection of new buildings to its already large plant. The company has increased the wages of its employees 10 and 20 cents a day, the increase being graduated by the term of service.

The Harrison Manufacturing Company, Lockport, N. Y., manufacturer of automobile radiators, will erect a large addition to its plant at a cost of $15,000.

The J. I. Case Threshing Machine Company, Racine, Wis., is preparing to erect a large warehouse and office building for its factory branch in Madison, Wis. The building will be 100 by 140 feet in size, two stories high, of solid brick construction and will cost approximately $35,000. The Madison branch was one of the first to be established by the Racine concern.

The Haynes Automobile Company, Kokomo, Ind., has received five carloads of new machinery and the factory is running 24 hours a day. The crowned fenders will now be manufactured within the Haynes factory. The new fender making equipment consists of presses and rolls for forming the crown or convex surface. The drop forging department has also been increased in capacity.

The H. Wagner Rubber Company, Cleveland, O., will manufacture all kinds of rubber products at Broadway and Gallup streets. The plant was formerly occupied by Samuel Austen & Sons.

The Billings & Spencer Company, Hartford, Conn., has purchased the plant formerly occupied by the Columbia Motor Car Company. The forge shop has been remodelled, and the whole plant has been completely changed. The company is said to be rushed with large orders for drop hammers.

The Standard Aluminum Company, Two Rivers, Wis., at its annual meeting, decided to increase the capital stock from $250,000 to $500,000 to accommodate the growth of business. The Alexander Warehouse, opposite the plant, has been purchased. The company is running at full capacity and on full time and may make extensions during the present year.

The Electrical Motor and Construction Company, Findlay, O., has increased its capital stock from $15,000 to $30,000, and has established branch houses at Fostoria and Norwalk. The company will build a large addition to the plant.

The New Castle Rubber Company, Sharon, Penn., has purchased the building and property of the New Castle Iron and Steel Company. The building will be remodelled for the manufacture of tires and other rubber goods. The new company is capitalized at $250,000 and soon will be in operation.

The Massnick-Phipps Manufacturing Company, Detroit, Mich., has secured the plant of the former Wahl Motor Company. This company manufactures the Perkins four and eight-cylinder motors. An addition of 30,000 square feet of floor space will be made. The working force will be increased to 500 men and the production increased from 50 to 100 motors a day.

The Midler Auto Supply Company, Trenton, N. J., has been appointed distributors for the well known Braender tires. They will carry a full stock of the standard sizes in both the plain and nonskid tires and tubes, and car owners in their vicinity will have no difficulty in securing this popular tire promptly and to meet their requirements.

The Saxon Motor Company, Detroit, Mich., has announced that 1500 cars will be made in April; an output of 25,000 cars for the year is being figured on. Shipments of the Saxon "Sixes" have been started from the plant and Saxon dealers will receive the new $785 machine as fast as production will permit.

The Fitzgerald Manufacturing Company, Torrington, Conn., has lowered the price of the Clero hand-operated warning signal from $4.50 to $3.50. The extra large model is now listed at $4.

The Autocar Company, Ardmore, Penn., has reported a 40 per cent. increase in its business at this season of the year, without the assistance of any "war orders." The sales of its commercial cars are taken to indicate both a big revival in general business and a growing appreciation of the motor vehicle in commercial work.

Chandler Motor Car Company, Cleveland, O., is now offering to the trade a model with a new body, carrying seven passengers. The body is built in sweeping stream lines, and in order to accommodate it the wheelbase has been lengthened. This is the only mechanical change, and the price remains at $1295. Two jump seats fold into the back of the front seat when not in use, and are then concealed by flaps, so that there is nothing to indicate that the machine carries more than five passengers. By a single direct motion of the hand the seat may be raised into position, when it is self-supporting. There are no supports beneath it, so that the passenger in the back is not cramped for foot room.

The Columbia Tire and Rubber Company, Columbiana, O., recently organized to manufacture automobile tires and tubes as part of the Mansfield Tire and Rubber Company of Mansfield, O., has elected the following officers for the first year: Charles Hoffman, president; W. G. Henne, vice president and general manager; Jessie E. LaDow, secretary, and Walter F. Henne of Piqua, treasurer. These officers and William Isaly of Mansfield, J. C. Henne and J. E. Schauer of Troy will act as the board of directors.

The Connecticut Telephone and Electric Company, Meriden, Conn., is adding two stories on one of its present three-story buildings. This will make a building 50 by 100 feet, five stories in height.

The Airplex Inner Tire Company, Springfield, Mo., has moved from St. Louis and in the new location will increase its equipment.

John Colyer & Co., Newark, N. J., will build a factory on Halsey street. The company manufactures carriages and automobiles bodies.

The Swinehart Tire and Rubber Company, Akron, O., is having plans prepared for a three-story reinforced concrete and brick factory addition, which will be 60 by 130 feet.

C. W. Mower, Spokane, Wash., is planning the erection of a factory at Los Angeles, Cal., for the construction of portable garages and beach houses to cost $40,000.

The Babcock Automobile Spring Company, Milwaukee, Wis., will erect a brick factory for production of spring assemblies for automobiles and trucks and also a number of shock absorbing devices. The factory will be 30 by 100 feet and will be located on Milwaukee street, near Chicago avenue.

A HIGHLY EFFICIENT SERVICE STATION.

The Service Extended by the Packard Motor Car Company of Boston to Owners and Dealers—A Unit of a National System.

THE largest service station in this country, if not in the world, is said to be that of the Packard Motor Car Company of Boston,

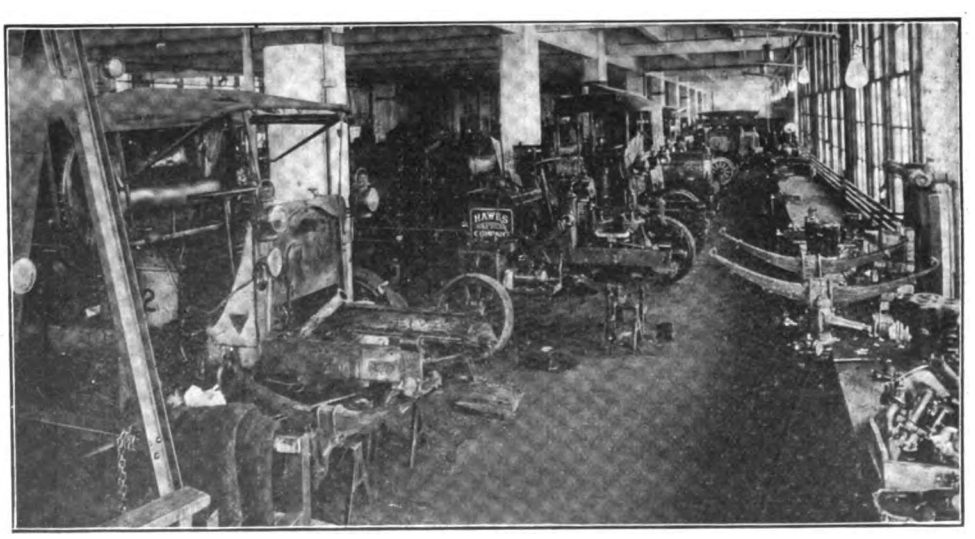
The Alvan T. Fuller Building, the Salesrooms and Service Station of the Packard Motor Car Company of Boston, Fuller Square, Allston, Boston.

which is situated in the Boston suburb of Allston, at Fuller square. It is maintained by the Packard company's Boston branch, which also is headquarters for the other New England branches located in Providence, R. I., Worcester, Mass., and Portland, Me. This station is one of the many that the company conducts throughout the country for the convenience of owners and operators of Packard pleasure cars and motor trucks, and is representative of the vast organization. The following description is typical of all Packard stations.

Erected in 1909, the structure, consisting of four stories and basement, has a floor space of nearly three acres. In addition there is a yard of considerable size which is so sloped that the basement, for perhaps a third of the building's length, is lighted by windows, and can be entered direct from the yard. The building is constructed of stone, concrete and steel, and is as fire proof as modern science will permit. Care was taken in building that all parts of the interior would be lighted by natural light as much as possible.

The station is a combination of salesroom, repair shop, garage and stock room, where the motorist can either buy the latest model Packard pleasure car or truck, or have his machine overhauled, repaired or supplied almost instantly with any article of standard equipment The stock room, whose normal supply has been roughly estimated to have an aggregate value of $250,000, contains besides the actual components of Packard machines, a full line of equipment except tires, of which only a sufficient supply is maintained for use by the service station's own vehicles. In the repair shop, Packard machines are repaired or overhauled by experts who are specialists in their departments, insuring work up to factory standards and at a minimum of cost and time.

The station departments have been so laid out that work can be routed to obtain the most expeditious service. In the basement is located a large garage for the purpose of storing the company's machines, the heating



Part of the First Floor Where the Motor Truck Chassis Are Repaired, the Machines Being Disassembled Here and the Work Done in the Different Departments.

plant, two recreation rooms and a large locker room for employees, and the garage wash stands. The first floor is occupied by the salesroom in front, the offices of the executive, Alvan T. Fuller, and the general manager and the department managers, while the remainder of the

Digitized by Google

floor is intended for the storage of machines that are being repaired or adjusted. This section is entered from the yard and by elevator, one end of which is accessible from the yard and the other from the main floor.

The front of the second floor is occupied by the accounting department. The stock room, in which is maintained a full series of every part required for the maintenance of every type of Packard car or truck, is adjoining. The back of the floor is given up to the storage of bodies and some new cars, many of the bodies belonging to owners who possess two bodies, keeping one at the station and using the other on a single chassis, making change according to the season's requirements. The company also maintains a stock of new bodies of varying types for sale.

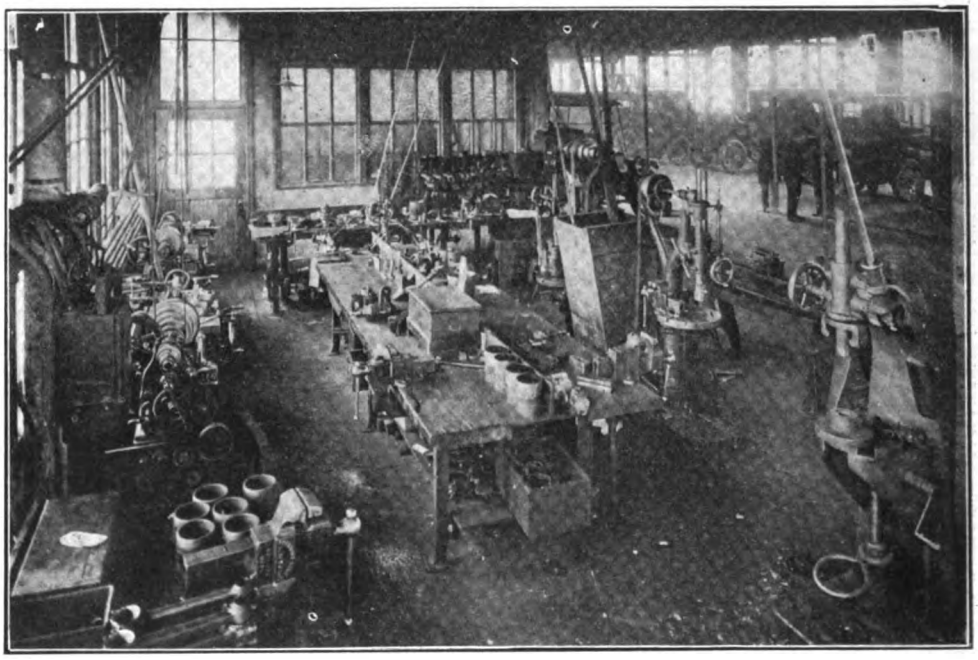
The third floor is taken up by the office of the truck sales department, the woodworking, top making, upholstering and paint shops, and the varnish room. Here also is large space for storage.

One of the most interesting departments, from the owner's viewpoint, is the repair shop on the fourth floor, which occupies about a half acre of space, and is served by elevators and stairways. One of the features is the 600 foot long work bench that almost girdles the floor and is lighted by large windows against which the bench is located. A section is shown in an accompanying illustration. The method of work is to line the vehicles head on to the bench, leaving only sufficient space for the workmen's movements and not enough to make for unnecessary steps. The shop is divided into departments, the motor repairing being done at the rear of the shop, the steering gears overhauled in an adjoining department, machine work performed in another department, etc. The machine shop is equipped with every power tool and labor saving device that experience has shown necessary, such as arbor presses, drill presses, lathes, shapers and grinders. In an accompanying illustration is shown a section of the machine shop and a door leading to the blacksmith shop.

For the protection of itself and its customers, the company has installed a very complete record system of all work done and material supplied. The equipment of a machine is carefully checked when received. A work order, specifying particularly the exact work to be done, is made out on a form blank and is placed in leather and celluloid case that is attached to the machine. As each phase of the job is done it is so written upon the order blank. Requisitions for material, signed by the foremen, time cards, issued by the foremen and signed by the workmen, and credits for supplies or parts requisitioned but not used, are placed in the holder, which is sent to the accounting department when the job is completed. Every item of the charge can thus be traced to its origin, a fact that insures an accurate bill for the owner and prevention of waste for the company.

The Allston station is the main service station of the Packard Company in New England, though there is an equally complete organization in Providence on a smaller scale. The Worcester and Portland stations are equipped to do ordinary repair work, while special jobs and overhauling are intended to be sent to the Allston station.

The Packard company stands behind its product up to a reasonable standard. Its obligations to every purchaser are set forth in its statement of service policy, which is attached to the face of every retail selling contract. Briefly stated, the company contracts to give monthly inspections and minor adjustments, that require no more than three hours, for the first year without charge if the vehicle is delivered to the service station. Otherwise an inspector will be sent monthly after the first month, and will make adjustments that require three hours or less, the charge being as follows: $1.50 per inspection, if within a 10-mile radius; $2.50, if within a 20-mile radius, and $3, if within a 30-mile radius. Special arrangements will be made for greater distances. If any repair work ordered by the customer is done, a charge for labor and material based on the regular rates is made. Provided the truck has not been tampered with, or injured through accident, overloading or overspeeding, and is brought to the service station, all necessary adjustments will be made gratis during the first month after delivery. Defective parts will be installed without charge at the station for a period of 90 days after delivery. If desired, an instructor will be supplied within a radius of 100 miles for a period of three days without charge to the owner.



The Machine Tool Department of the Fourth Floor of the Service Station, Given Over to General Mechanical Repairing—The Room Beyond the Tools Is the Blacksmith Shop.

WILL HAVE BIG SERVICE SYSTEM.

Detroit Organization Plans to Establish Plain of Stations Along Route of the Lincoln Highway.

The National United Service Company, Ford Building, Detroit, Mich., has been organized with the purpose of establishing service stations in many or all of the principal cities and towns through which the Lincoln Highway has or will be built. The stations will be known as of the "Nusco" systems, the initials of the company name being used to coin the word. Statement is made that the company plans to extend the chain of stations so that service can be afforded on every travelable roadway in the United States. The company's activities will first be confined to the Lincoln Highway. The concern states that for the past two years it has been perfecting its organization and plans and that all details were settled before making a public announcement. It has undertaken to market the entire outputs of 46 different concerns who manufacture various lines of automobiles, accessories and motor car parts, and is now ready to sell Nusco equipment ranging from spark plugs to motor trucks.

HAS DOUBLED CAPITAL STOCK.

Demand for Victor Gaskets so Great That Manufacturer Has Largely Increased Production Facilities.

The Victor Manufacturing and Gasket Company, Chicago, Ill., has increased its capital stock from $50,000 to $100,000, to provide adequate manufacturing facilities made necessary by the big demand for its large variety of copper-brass asbestos cylinder head gaskets such as are largely used by manufacturers on detachable head motors. For the aid of owners, dealers and jobbers, the company has published a ready reference and list of Victor gaskets, illustrated, so that practically every size gasket on the market for repair purposes can be obtained at reasonable prices from the Victor company without first writing to the manufacturer for information. These lists can be secured by addressing the Victor Manufacturing and Gasket Company, Troy and 21st streets, Chicago, Ill., and by mentioning the Accessory and Garage Journal.

An initial dividend of 10 per cent. has been ordered for the creditors of A. H. Kling & Co., Detroit, Mich., automobile supply dealers.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, D. C., Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

Automobiles, No. 15,918—An American consul in Denmark reports that a firm in his district wishes to represent American manufacturers of automobiles. Correspondence may be in English.

Automobiles and Accessories and Men's Furnishings, No. 15,935—The commercial agent of the Bureau of Foreign and Domestic Commerce at New York City reports that a South American commission merchant, who is now in New York City, desires to secure agencies from reliable manufacturers for the sale of the following lines in South America: Shirts, collars, cuffs, leather belts, men's socks and underwear, knitted neckwear; men's, women's and children's shoes; and automobiles and accessories. It is stated that all orders will be paid for in New York City.

Automobile Parts and Accessories and Aniline Dyes, No. 16,001—The commercial agent of the Bureau of Foreign and Domestic Commerce in New York City reports that the representative of a foreign automobile company is in this country and desires to make purchases of automobile parts and accessories. He is also anxious to place a large order for aniline dyes. Interested American firms should get into communication with this man at once.

Automobile Trucks, No. 16,011—An American consular officer in Central America reports an opportunity to sell automobile trucks.

Lumber, Small Automobiles and Motor Trucks, No. 16,022—An American consul in southern Europe reports that a firm in his district is desirous of receiving catalogues, price lists, etc., on small automobiles, motor trucks and lumber. Bank reference is given.

Automobiles, No. 16,161—An American consular officer is in receipt of a request from a business man in England stating that he wishes to be put in touch with American manufacturers of a small automobile which may be sold for about $1000, together with electric light and starting equipment. Reference is given.

Typewriters, Automobiles, Etc., No. 16,368—An American consular officer in Italy reports that a business man in his district desires to enter into commercial relations with American manufacturers of typewriters, kerosene engines, from one to 10 horsepower, for industrial use, low and medium priced automobiles and codfish. Catalogues, prices, etc., should be sent at once. Correspondence may be in English.

Automobiles, No. 16,371—A firm in South America informs an American consular officer that it desires to correspond with American manufacturers of light automobiles. Catalogues, specifications, etc., with prices f. o. b steamer New York, should be sent at once.

CONTEMPLATED NEW BUILDING OPERATIONS.

PLANS AND SPECIFICATIONS.

HILLCREST BUILDING COMPANY, NEW YORK CITY, 950 Ogden avenue; one-story garage, 185x94, $9000.

H. L. BELL, BAYSIDE, L. I.; one-story garage, 30x60, $2000.

EDWARD ROCHE, FAR ROCKAWAY, L. I.; one-story garage, 61x204, $14,000.

W. S. WETMORE, PORT CHESTER, N. Y.; one-story garage, 25x50, $3000.

GEORGE TAIT, GLEN FALLS, N. Y., 336 Glen street; two-story garage, 22x52.

A. H. BOYCE, SENECA FALLS, N. Y.; two-story garage, 32x108.

ROBERT ROBSON, SALEM, MASS., 39 New street; one and two-story garage, 50x120.

R. W. FOOTE, NEW HAVEN, CONN., 185 Church street; one and two-story public garage, 46x52 and 84x225.

SOUTHERN NORTHEAST TELEPHONE COMPANY, NEW HAVEN, CONN., 126 Court street; 1½-story garage, 50x105, $10,000.

S. MONICA, ORANGE, N. J., 5 Hurlon street; 1½-story garage, 47x53, $5000.

WALTER L. HENRY, LEBANON, PENN.; one-story garage, 35x45.

GEORGE C. ALBERT, DAYTON, O., 134 West Forest avenue; one-story garage, 16x29.

WELD & LOOMIS, AKRON, O., 94 East Market street; one-story garage, 55x193, $12,000.

GRAY ESTATE, DETROIT, MICH.; two-story garage, 57x202.

V. A. SIEBERT, MILWAUKEE, 557 Twelfth street; one-story garage, 50x60.

H. L. SCHAEFER, ST. PAUL, MINN., 653 Aurora avenue; commercial garage, 50x150, $25,000.

WILLIAM PRINDLE & CO., DULUTH, MINN., Lonsdale building; two-story garage, 50x115, $20,000.

R. S. DUFFUELD, MASON CITY, IA., 107 South Main street; one-story garage, 75x44.

E. SNECKLOTH, CORRECTIONVILLE, IA.; one-story garage, 50x120, $6000.

GORDON FIREPROOF WAREHOUSE AND VAN COMPANY, OMAHA, NEB., 219 North 11th street; one-story garage, 50x132.

WILLIS G. HEIM, SAVANNAH, MO.; one-story garage, 40x120, $5000.

J. J. BRENNAN, FT. DODGE, IA., 560 Wird avenue; three-story garage, 64x140.

PATERSON & FINCH, KEARNEY, NEB.; one-story garage, $12,000.

P. S. TROTTER, CARROLTON, MO.; one-story garage, 50x80, $9000.

EDWIN W. SHIELDS, KANSAS CITY, MO., 119 Board of Trade building; six-story garage and display room 50x115, $100,000. Lessee, Studebaker Motor Company.

HARRY W. KEEP, ST. PAUL, MINN., 428 Selby avenue; one-story commercial garage, 73x92, $10,000.

LEO M. GURDA, MILWAUKEE, 478 Mitchell street; two-story garage, 22x20.

P. E. BLAUET, PAINESVILLE, O.; one-story garage, 24x14.

MAX LOESCHER, MUSKEGON, MICH.; two-story garage, 26x30, $2500.

J. J. ALTHOUSE, READING, PENN., 738 North Front street; two-story garage, 15x16.

JOHN FREED, COLLEGEVILLE, PENN.; one-story garage, 10x15.

E. W. NEWTON, SOMERVILLE, MASS.; one-story garage, 13x21.

SELTZER & LEVINE, HARTFORD, CONN., 64 Winthrop street; one-story garage, 45x105.

CARPENTER & HILL, SPRINGFIELD, MASS., 33 Wainer street; one-story garage, 65x100.

MRS. BEATRICE DE MILLO, ROCKAWAY BEACH, L. I.; 1½-story garage, 20x20, $1400.

WILLIAM S. O'BRIEN, NEW YORK, 310 West 42nd street; one-story garage, 32x120, $12,000.

E. J. BLOOM, CHICAGO, ILL., 5133 Ellis avenue; one-story garage, 106x221.

HENRY RENLING, PEORIA, ILL.; one-story garage; 50x75.

W. E. DORAN, BRISTOL, PENN.; one-story brick garage, 29x82.

J. W. SMITH, ELYRIA, O.; one- story garage. 60x120, $10,000.

HARRY SPRAGUE, UNIONVILLE, O.; one-story garage, 26x32.

REES B. PRICE, CINCINNATI, O., 6842 Lower River road; one-story garage, 50x100, $10,000.

AUGUST RICHTER, CINCINNATI, O., 1249 West 7th street; one-story garage, 20x65.

FANNIE BRISHMAN, BALTIMORE, MD., 1012 West Lexington street; one-story garage, 49x131, $5000.

AUBREY L. CLARKE, WASHINGTON, D. C.; one-story garage, 21x24, $1000.

MERRICK LUMBER COMPANY, HOLYOKE, MASS.; two-story garage, 29x32.

JOHN W. PATTER, WATERBURY, CONN., 115 Woodside avenue; one-story garage, 10x20, $800.

ANTHONY LINK, ROCHESTER, N. Y.; one-story garage, 51x85, $18,000.

E. C. ROPER, AUBURN, N. Y.; two-story garage, 91x33, $15,000.

PRACTICAL SUGGESTIONS FOR REPAIRMEN.

FITTING CLUTCH STOPS.

Many machines are fitted with clutch brakes which are intended to reduce the speed of the clutch so that the gears of the transmission gearset may be changed without clashing, for unless the pinions to be engaged are revolving at approximately the same speed they will clash. Gear clashing is noisy, but this is not the real objection to it, for attempts to mesh two gears moving at different speeds is certain to be destructive.

Good engineering does not approve braking on the chamfered edges of the gears. As the clutch is disengaged it will run free, and until this movement has diminished the gears ought not to be changed. The clutch brake will prevent spinning, but without a brake clutch stops are practical and may be installed at very small expense. The stop shown at Fig. 5 A is adapted for a chassis with a cross frame member that will permit it being mounted. A section of half-inch round steel rod is threaded at one end and fitted with a wooden block carrying a leather pad at the other end. A "T" piece of steel is bolted to the frame member. In this is a half-inch hole that is threaded to take the rod end, lock nuts holding it securely. The rod can be adjusted in this "T" piece so that when the clutch is withdrawn it will so contact with the leather faced block that it will be quickly stopped.

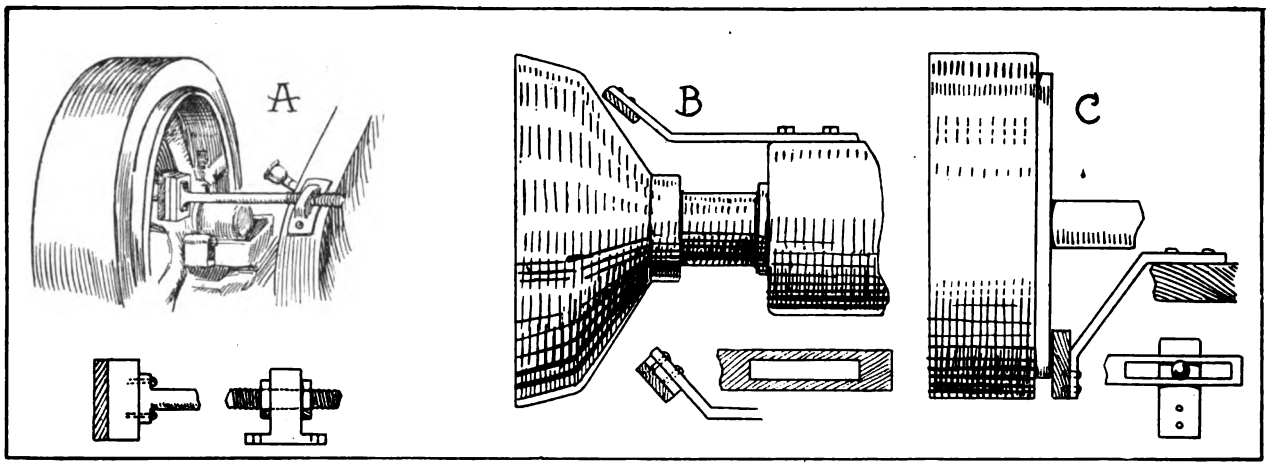

Fig. 5—A, Clutch Stop Fitted to Frame Cross Member; B, Clutch Stop Installed on Gearset Case; C, Clutch Stop Located on Sub-Frame.

Another form of stop is shown at Fig. 5 B, this being a piece of spring steel that is slotted at one end, the other end being bent at an angle, and to this end a solid leather pad is riveted. The piece of steel is secured to the case of the gearset by the studs and the slot will afford any adjustment that is desired. The spring will yield when the clutch is drawn against it and the action is less harsh and is more satisfactory than the other. A third form is seen at Fig. 5 C, which is intended to be installed on the sub-frame, this being adapted for chassis where the others cannot be used. A plate that is drilled to take two bolts is bolted to the frame. The stop is a section of spring steel on which is riveted a leather pad. The stop shank is slotted, as stated of type B, and is adjusted on the plate and firmly bolted. The design is that the pad will contact with the periphery of the clutch female member as it is withdrawn from the flywheel.

Old type machines that are in every way serviceable are seldom fitted with clutch brakes, a condition that is certain to cause noisy operation and wear of the gears that will necessarily add to expense of maintenance. Owners are not often inclined to spend much money for improvements, but are generally willing to economize.

REMOVING A FLYWHEEL.

Flywheels are usually keyed to a shaft end, often with a gib, which is driven in until the wheel is firmly locked. This form of retention is also used for gears. When a gib is used a tool of the type that is shown at Fig. 6-A can be used advantageously. This tool is of steel, with curved or hooked ends, and the point of the end is placed under the lip of the gib and the back set against the hub of the flywheel or gear. The hand leverage alone will not be sufficient to start the gib, but a series of sharp blows with a hammer will usually loosen it. The size tool will depend upon the proportions of the work that it is used upon, but several of different lengths will be found very useful in a shop.

The shut off cock in the fuel supply line is not always located so that it can be conveniently reached. Shutting off the gasoline at night or when leaving the car for a time is an insurance against loss of fuel by leakage, and by the carburetor flooding, and it is very frequently a prevention of theft, because men who might endeavor to steal a machine would of necessity have to search for the reason why it could not be started, and would require time at least to learn the cause of the failure of the motor to start.

The illustration at Fig. 6-B shows how an in-

Digitized by Google

genious driver cut the metal skirt between the running board and chassis frame of his car and fitted into it a door with hinges and a catch, so that almost instantly he could reach the petcock, which was close to the frame. The petcock was practically inaccessible before the change.

FITTING PISTON PINS.

When a piston and the connecting rod has been removed from the cylinder for any reason the condition of the bearing should be learned. There are different ways of retaining the wristpin, one being that where the wristpin is clamped in the split end of the connecting rod, with the ends oscillating in the bearings in the bosses of the pistons, or sometimes with a ring around the bosses to prevent the ends of the pin touching and scoring the walls of the cylinder and another is with the wristpins fixed in the pistons by pins or set screws. The latter method is seen at Fig. 6-C. When the wristpins are driven out blocks of wood should be used, to prevent damage, and care should be taken to avoid breaking the pistons. When worn the bushings, either in the pistons or the connecting rods, should be renewed. When reassembled the bearings should be snug, but not too tight, else the edges of the pistons will knock against the cylinder walls. Care should be taken to well lubricate the bearings before the motor is started.

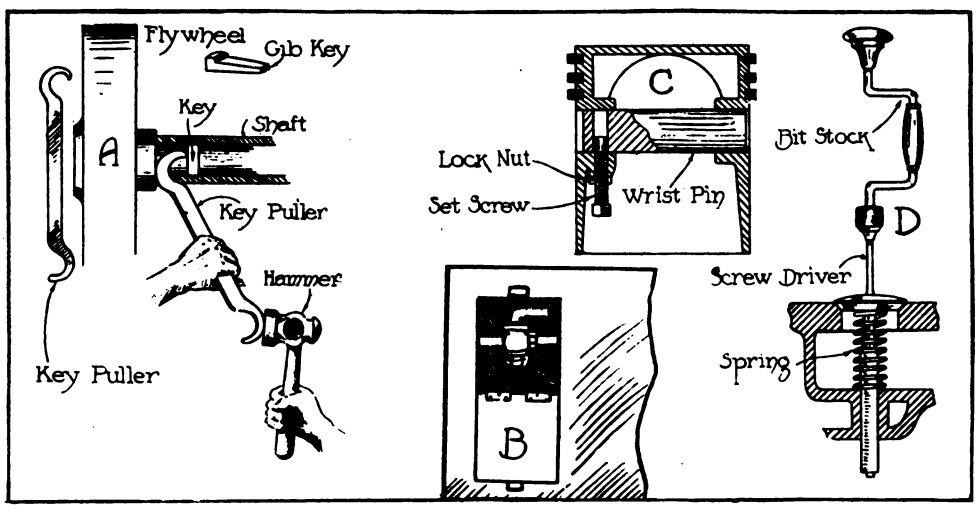

Fig. 6—A, Convenient Tool for Removing Fly wheel; B, Making Fuel Cock Accessible; C, One Means of Retaining Wristpins in Pistons; D, Handy Assembly for Grinding Valves.

Valve grinding is tedious work, even with the best of tools, because when a job is well done the metal should have a glass finish, which can only be obtained by patience. The metal will vary, so that a condition that may require an hour's work on one seat may not be obtained with three times the labor on another. Hand work is slower, but is also the best, and with a common bit stock and a screw driver blade a good workman will be able to perfectly grind a set of valve ports. The most convenient manner of doing the work with a motor with valve pockets is to fit a spring as shown in the sketch at Fig. 6D. which will raise the valve whenever the pressure is relieved. The abrasive, either powdered glass or emery and oil, should be applied frequently and in small quantities, and only on the bevelled edge of the valve. The valve and the seat should be wiped clean from time to time. The valve should be swung about 90 degrees, or a quarter turn, and comparatively slight pressure should be exerted upon the bit stock. When the valve and seat have been ground with the coarse abrasive, the fine or finishing compound should be used. After the grinding the valves and seats should be thoroughly washed with gasoline.

SILENCING NOISY TAPPETS.

Valve tappets that are noisy may not be sufficiently worn to justify replacing with new, and these can be effectually silenced by the use of fiber inserts that can be placed in the heads of the adjusting screws, if the tappet be of an adjustable type. Exact measurement must be made of the clearance between the valve stem ends and the tappets, with the adjusting screws turned into the tappet rods as far as possible. This had best be done with the engine warm, and always with the valves seated. The tappet rods are removed and each marked so that it may be replaced in the original guide.

French fiber is preferable if the mechanic has a choice of materials. A piece about ¾ inch thickness should be selected for each insert, slightly larger than the head of the adjusting screw. The screws are removed from the rods, the temper is drawn, and they are placed in a lathe and bottomed holes ⅜ inch diameter, and of such depth that they will retain the inserts, are drilled in the heads. The holes are centered. The fiber pieces are then turned in a lathe until one end of each is a diameter slightly in excess of the ⅜ inch holes, and this boss is the depth of the hole in length. The fiber is then driven into the hole in the adjusting screw, and when firmly seated all around the remainder of the insert is turned in a lathe to the diameter of the head of the adjusting screw. This process is repeated with all the tappet rods. The screw heads, if battered, by the valve stem ends, can be smoothed with a file. The form of the inset is shown at Fig. 7-A.

At Fig. 7-B is shown a method for fitting non-adjusting tappets with screws so that they may be adjusted. If the tappet guides are high they can be cut off so there will be sufficient space for fitting the screws and nuts, but if there is not the

Digitized by Google

desired clearance, which must be determined by measuring the screws and the space between the tappet guides and the valve stem ends, then the

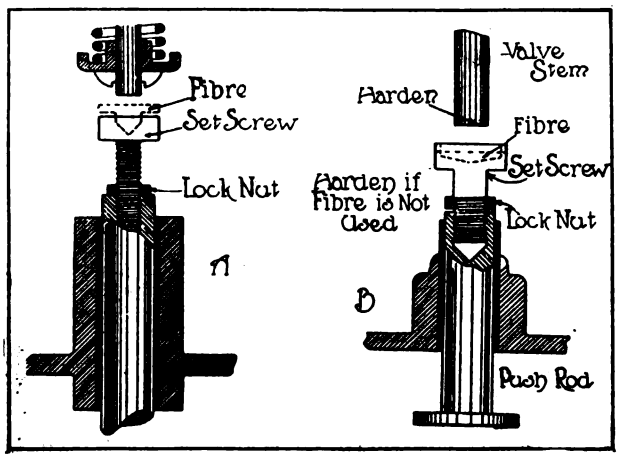

Fig. 7—A, Means of Quieting Noisy Adjustable Tappet Rod by Fiber Insert in Adjusting Screw; B, Non-Adjustable Tappet Converted to Adjusting Type and Silenced by Inset of Fiber.

valve stems and the springs must be shortened. If the clearance will permit, the tappet guides and tappets can be cut off. In such an event the valves need not be removed.

For cutting the tappets the temper must be reduced by heating. After the annealing and cutting the tappets are drilled with holes 5-16, 3/8 or even half inch diameter, which are sufficient depth so that, when tapped, the adjusting screws may be turned in the full length. The heads of the screws are then turned out, as indicated by the dotted lines, and fiber pieces turned that can be seated firmly when driven into the holes. If no fiber is used the screw heads should be hardened, and if the valve stems are cut these should also be hardened. When the adjustments of the tappets are made the clearance between the screws and valve stems should be approximately the thickness of a business card, but the only safe timing is by the indicating marks placed on the face of the flywheel.

INGENIOUS WATER JACKET REPAIR.

Resourcefulness in repairing not only means economy of time and labor, but at the same time restoration of serviceability to what might otherwise be rejected as useless. A repair that illustrates this is shown at Fig. 8-A, it being on an applied copper water jacket. The water intake manifold was retained by bolts that passed through the manifold and screwed into spiders, as seen at Fig. 8-B. The arms of one spider had corroded so that they broke when the manifold was removed. The owner was about to purchase a new cylinder, for the manifold could not be made tight with cement with the other three bolts drawn up snug. A piece of metal nearly as wide as the diameter of the hole in the cylinder jacket and about a half inch longer than its width, was drilled and tapped to take a bolt threaded its entire length. The plate was inserted in the water jacket through the hole and held until the bolt was screwed through it. The outer end of the bolt was then passed through the manifold, and with an outside nut the manifold was drawn up and seated tightly against the jacket, as is seen at Fig. 8-A. The repair was in every way efficient.

A HOME MADE CHAIN CLAMP.

Those who own or drive motor vehicles that are propelled by chains understand the annoyances incident to removing a link if the chain be worn, or replacing a link in the event of breakage. If the work be necessary in the garage or shop, with tools convenient, it may be quickly done, but without a chain clamp much trouble may be experienced. A very handy chain clamp can be made of two pieces of half-inch steel rod, bent into the form shown at Fig. 8-C, and threaded the greater part of the straight sections, the one left and the other right thread, and a piece of hexagonal steel one inch or 1¼ inches section, drilled through and tapped to take the threaded ends of the rods, as assembled as is seen at Fig. 8-D. With this tool and a wrench that will fit the centre section, a chain can be repaired or adjusted very quickly. It can be quickly separated or made ready for use.

A TIRE CHAIN HINT.

In the spring of the year, when the frost is coming out of the ground, one is liable to encounter mudholes, especially in the country. Even with the usual tire chains the rear wheels may sink deep in a soft surface and the car cannot be moved, although the wheels will spin. In such an emergency the following suggestion may be found useful: If the wheels sink and continue to spin, stop the car and remove the chains. Wrap the chains around the tires so that there are two turns between two spokes and tie the ends firmly. This will fix each chain in one place around the diameter of each tire. Upon applying power with the low speed gear in mesh the machine will pull out of the hole.

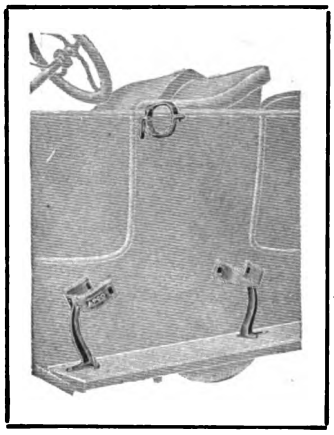
NEW APCO TIRE HOLDER.

Designed to Carry Shoes on the Running Board Where They Are Protected From Heat and Mud.

The Auto Parts Company, Providence, R. I., manufacturer of Apco specialties for Ford cars, is producing several new Apco devices which will recommend themselves to owners and the trade because of their practical qualities and reasonable price. Four of these are shown in the accompanying illustration. The tire holders are designed to be placed on the running board, a location that has advantages for carrying extra tires over the rear of the body, where the shoes may be splashed with mud and subjected to heat of exhaust gases, which destroys the life of rubber. A desirable quality of the Apco tire holders is their light weight, the maker stating that they weigh seven pounds less than the lightest rear holder in the market. The Apco design is very strong and compact. No straps are necessary. The holders were designed to accurately fit the Ford size of tires. They retail for $2 the set.



Apco Side Tire Holders.

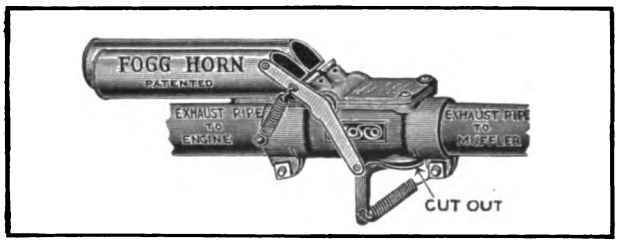
MOSCO FORD SPECIALTIES.

The Motor Specialties Company, Waltham, Mass., Produces a Full Line of Desirable Fittings.

In its 1915 catalogue, which also includes a revised price list that will interest dealers and garage men, the Motor Specialties Company, Waltham, Mass., illustrate and describe a large number of its Ford fittings. The line ranges from the Fogg Horn, shown in an accompanying illustration, to wheel pullers, top bow holders, Bemus Ford timers, Mosco shock absorbers, Mosco power tire pumps, Master vibrators, anti-rattlers for doors, steering and radius rods, Excel jacks, etc. This catalogue is free to dealers and garage men upon request, and by mentioning the Accessory and Garage Journal.

The 1915 model Fogg horn is provided with a cut-out, which is a new feature. The horn is located on the exhaust pipe between the engine and muffler and is controlled by two foot pedals and serves the purposes of two appliances, a muffler and a signal horn. At low engine speeds it delivers a full, mellow signal. One of the pedals is of the locking type to hold open the cut-out when so desired. The horn can also be used on a Metz car.

The horn is sold either with or without the cut-out, selling at $4.50 in the former case, and $5 in the latter combination. It is packed in a carton for shipment and



Fogg Horn With Cut-out.

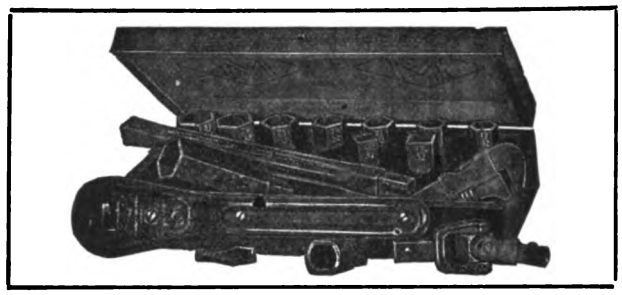
then measures over all 12½ by 4 by 4¾ inches, weighing less than 3¼ pounds. Each appliance is guaranteed for the life of the car.

MOSSBERG MASTER TOOLS.

Ford Car Owners and Dealers Can Obtain a Complete Line of Wrenches for Almost All Purposes.

The Frank Mossberg Company, Attleboro, Mass., makers of the widely known Mossberg wrenches and specialties, is producing a complete line of tools for use upon the Ford car, especially the model T. This car requires many special tools, and the Mossberg specialties are designed to minimize the time and labor in adjustment or repair work on the chassis, etc.

The accompanying illustration shows set No. 15 A, which consists of a special socket wrench set for Ford cars, and sells for $5.50. This set includes a reversible ratchet handle, No. 350, a tubular extension bar, a universal joint, a screw driver bit, a spark plug socket 31-32 of an inch in size, designed to fit Ford plug, and



Mossberg Master Tools.

10 guaranteed sockets. Seven of the sockets are hexagonal and of sizes 17-32, 19-32, 21-32, 23-32, 25-32, 29-32 and 31-32 of an inch. Two are square, made to fit 1915 main bearing bolts, sizes 10-32 and 15-32 of an inch, while one oval socket is provided to fit main bearing bolts designed previous to 1915.

ALBEX FOLDING GOGGLES.

Willson & Co., Making a Self-Adjusting, Perfect Fitting Eye Protection for Motorists.

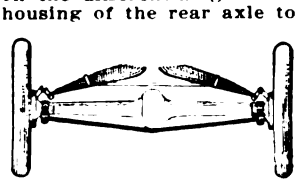
T. A. Willson & Co., Inc., Reading, Penn., is marketing the Albex folding goggles, formerly known as the Zyblex, which is designed to fit any face snugly, and still give perfect ventilation. The self-adjusting bridge, made of strong, silk braid, automatically conforms to any shape of features and clings so closely as to exclude dangerous dust laden air. The folding leather sides are soft and pliable and well ventilated. The temple cables are full and flexible and cannot pull or bind. The goggles are made with flat, ground and polished, optically perfect lenses, and are supplied in either clear white, amber, fleuzal, smoke or amethyst colors, the manufacturer recommending amber or fleuzal. The goggles can be folded and carried in a handsome genuine seal grain leather case, that is included in the price of $2. It is stated that more than 100,000 motorists are now using these goggles. The complete line carried by the Willson company consists of the goggles mentioned, style G 1, the Albex night and day goggles, style G 1½, and the Albex folding goggles for ladies and children, style G 11. Style G 1½ sells for $2.50, and style G 11 for $2. Further particulars can be obtained by addressing the T. A. Willson & Co., Inc., Reading, Penn., and mentioning the Accessory and Garage Journal.

Self-Adjusting Eye Protectors.

FORD REAR AXLE TRUSSES.

Two Types That Are Designed to Increase the Safety and Improve the Operation of Cars.

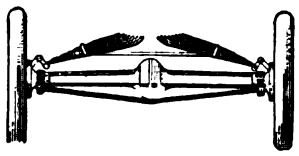
Many times the continual driving and traction strains on the differential gear and road shocks will force the housing of the rear axle to sag, which necessarily must throw the shafts and gears out of line. This condition will cause abnormal wear on the bearings, cause the rivets and screw holes to wear and open the joints so that the grease may work out. The Sunvold & Larson Manufacturing Company, Minneapolis, Minn., is building trusses that are designed to stiffen and support the differential housing rear axles of model "T" Ford chassis. Two



The S. & L. Single Rear Axle Truss.

Digitized by Google

styles are manufactured, one having the single rod that is installed underneath the housing, and the other having twin rods, one underneath and the other at the back, both types of which are shown in accompanying illustrations. These rods are made of steel and are attached to malleable iron collars that clamp around the flange sleeve outside the rivets. Statement is made that the double truss holds the axles in perfect alignment under all conditions, because the upper rod prevents the housing from being forced back and out, while the bottom one prevents sagging. The single truss that runs underneath the housing holds the axle in place by taking the strain that would ordinarily be imposed on the differential housing. The double truss is sold for $2 and the single one for $1.50. The rods can be attached in a few minutes and the tension can be adjusted by the nuts at the end of the rods.

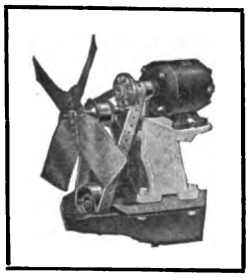


The S. & L. Double Rear Axle Truss.

THE NEW CARLETON GENERATOR.

A Lighting Equipment That Has a Porcupine Drive, Which Prevents Slippage of the Belt.

The Carleton Company, 172 Summer street, Boston, Mass., is building a generator known as No. 68, to supply current for motor car lighting, and which may be utilized with or without a storage battery. A feature of this generator is the porcupine drive, which is claimed will prevent belt slippage and reduces bearing stresses to a minimum. The Carleton generator, adaptable to all machines, lists at $15, and the discounts to the trade are very liberal. No machining or alterations are necessary, and the generator can be installed with a screw driver and a wrench. The construction of this machine is simple and sturdy throughout. Full information as to terms, sales plans and other details will be supplied upon request. For the owner or for the dealer this is a live, efficient system, capable of answering all purposes.

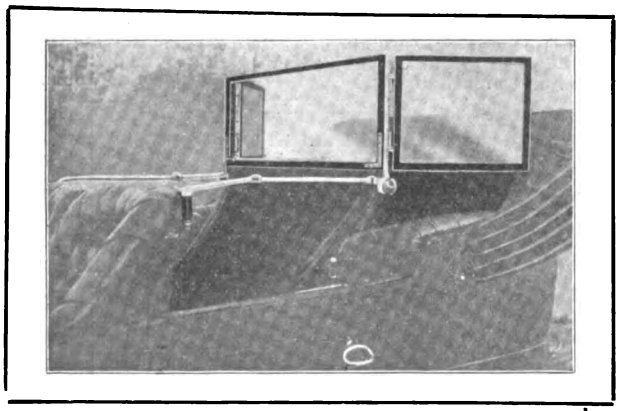


Carleton Generator.

AUSTER TONNEAU SHIELD.

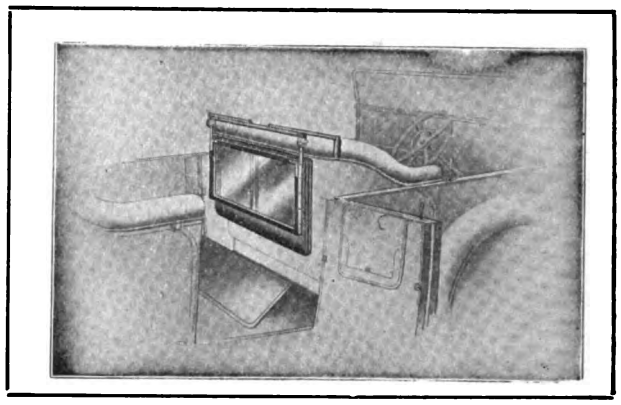
The Fryer-Auster Company, Providence, R. I., Is Marketing an Ideal Summer and Winter Touring Equipment.

A shield that positively protects the tonneau seats from all wind, dust and back draught, is the original and patented English tonneau shield, protected by U. S. patent, that is marketed by the Fryer-Auster Company, Providence, R. I. As is shown in the accompanying illustrations, the shield is adjustable and can be extended from the back of the front seat so as to thoroughly protect the occupants of the tonneau without obstructing their sight. When desired, the shield can be folded flat against the back of the front seat where it is safe from breakage.



Shield Extended to Protect Rear Seats.

It will make any touring car as comfortable and nearly as warm and weather-proof as a machine with an enclosed body. It is a practical, ornamental attachment, finely made and of the best material, and is thoroughly guaranteed as to workmanship and finish and to give protection to passengers in the back seats. It is said that more than 50,000 Auster shields are in use in Europe on all makes and models of cars. It is easily and quickly attached and can be used on any pleasure car. Further particulars can be obtained from the Fryer-Auster Company, 11 Pine street, Providence, R. I.

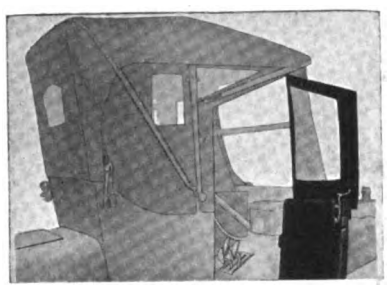


Shield Folded Up—When Not Wanted.

JITNEY CURTAINS FOR ALL CARS.

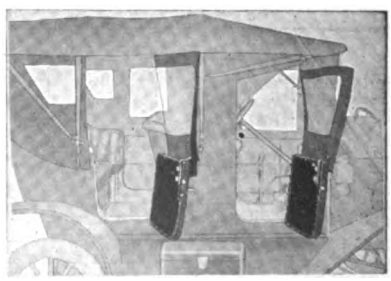
An Equipment That Will Eliminate Buttons and Afford Instant Egress or Ingress by a Door.

The Jitney Curtain Company, 30 N. Ludlow street, Dayton, O., is making curtains that are equipped with the Blackmore curtain opener, that are sold under the trade name of "Jitney Curtains." The company claims that these curtains will afford the greatest convenience to the user, because there are no buttons to be unfastened when one wishes to enter or leave the car. All that is necessary is to open the door and the curtain will swing with it. A bracket supports the curtain at the door edge, so that it can be opened or closed with the door. This makes the open car with top and side curtains as convenient for the passenger as is the limousine. The company states that this curtain opener has been used, because of the many unusual qualities, at an increase in cost, on the 1915 models of Packard, White, Cadillac, Chalmers and Hupmobile cars. The company is confident that many more prominent firms will include them in the equipment of their cars.



Runabout Equipped with Jitney Curtains.

These curtains are especially desirable during the winter months, as they will convert any touring car into a vehicle as comfortable as a limousine, but they also are equally convenient whenever curtains are required. The equipment practically incorporates the curtains into the doors and they are conveniently attachable and detachable. The curtain openers can be adopted to any machine and tops now in use may be converted at a trifling expense by any top maker. They are not unsightly and their utility is such that they are very generally demanded. The equipment is sold at retail for $1.50 a door curtain, and liberal discounts are made to dealers and top makers. Garage men and accessory dealers who are interested in a fast selling equipment should communicate with the company, mention the Accessory and Garage Journal, and obtain literature and information as to prices, etc.



Jitney Curtains as Used on a Touring Car.

GENERAL MATERIAL MARKET QUOTATIONS.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and the ending of that period for the purpose of comparison. Antimony shows a slight rise this month, while last month it rose three cents. Southern iron remained stationary, while northern iron dropped $1 a ton, and then advanced $1.50. Steel held firm until the close of the month, when it advanced sharply. Tin showed great activity, finally gaining $3 a ton over its high mark last month. Electrolytic copper rose nearly $2 during the month, while lake copper advanced $1.75. Oils were fairly steady, the greatest change being in cottonseed, which declined 30 cents a barrel.

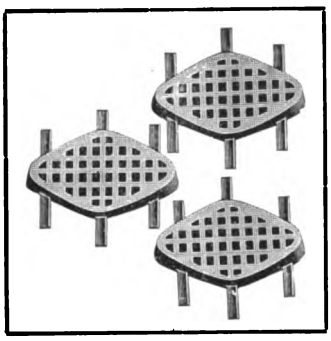
APCO RUBBER PEDAL PADS.

Equipment Specially Designed to Increase the Safety and the Comfort of the Operators of Ford Cars.

Of the many accessories that are supplied for Ford cars by the Auto Parts Company, Providence, R. I., one that will be of practical value to all drivers is the rubber pedal pads, which are adapted to be clamped to the foot pedals. As a Ford car is practically controlled by these foot pedals, it is essential that they be operated with certainty. When the pedals are new they have knurled surfaces, but with use they rapidly wear smooth. If the soles of the shoes are slippery from mud, oil or water, the result can be plainly foreseen. The foot will slip from the pedal and if this should happen when control is urgent, as in congested traffic or on a hill, an accident might be caused. As a precaution and protection the pedal pads are necessary equipment for every car. They are made of pure soft rubber and are extremely durable. When the foot is placed on one of these pads it cannot slip, and soles of the shoes will not wear out as quickly as when placed on the metal pedals. The pads are fitted with six steel strips that are clamped around the pedal. The price is 50 cents a set. They are sold by dealers or direct by the company.



Apco Pedal Pads.

SAMSON TIGER HAND HORN.

An Extremely Efficient Signal That Can Be Adapted to Many Conditions for Convenient Operation.

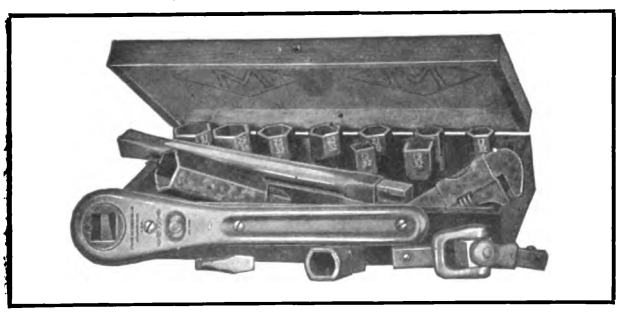
The Puritan Machine Company, 411-417 Lafayette boulevard, Detroit, Mich., sales agent for many well known automobile accessories, has placed in the market a hand operated warning signal which is retailing for $5, and is the Samson Tiger Hand Horn. The horn is operated by a handle which projects from the side, which with a slight turn will produce a loud tone. There are five different positions in which this horn can be mounted, so that the handle can be placed in any desired position. The horn can be operated by the elbow when the handle is located on the inside. The company claims that the wheel operated horn is absolutely reliable, for it cannot be damaged nor can it become jammed or broken.

The horn is fitted with an adjusting screw on the diaphragm plate for regulating the tone. This horn is well adapted for motor boats and if a long blast is desirous the company will supply a special handle, which is six inches longer than the standard for 25c. This horn is made and guaranteed by the American Electric Company, Chicago, Ill., which company will repair it free of cost should it ever become impaired through defect of workmanship or material and has not been tampered with. The horn can be secured in a black and nickel, black and brass or all black finish without extra charge.

MOSSBERG SOCKET WRENCHES.

These Sets Are Made in Different Types and Sizes and Are Especially Saving of Time and Labor.

Every mechanic and owner knows the value of wrenches. They are invaluable when working upon the engine or body and to have the right kind of wrenches at hand is a great convenience. There are many nuts and bolts in a car that should be gone over and tightened at regular intervals. Many of these nuts and bolts are in inaccessible places, and if the right kind of wrenches are not at hand they are frequently neglected or not well adjusted. Loose nuts and bolts create rattles which are very annoying to the occupant and damaging to the car. The Frank Mossberg Company, Attleboro, Mass., is manufacturing socket wrench sets with which an operator can reach nuts and bolts wherever located, no matter how inaccessible to the hands.



Mossberg Socket Wrench Set No. 15.

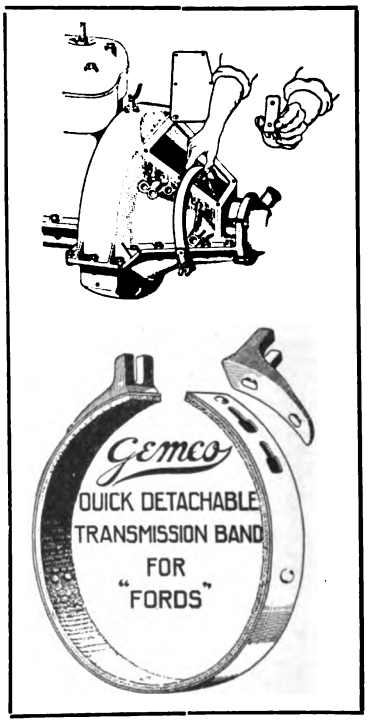
The company produces sets of different types and sizes for automobile work, these including sockets that are adopted for special purposes on different makes of cars. The larger sets are especially adapted for repair shop work where many tools are required. The socket wrenches are kept together in a box with their shank, etc. The dimension is plainly marked on each socket, so no time is lost looking for the right one. Various sets are made to fit Ford models, these ranging from a utility set for ordinary adjusting to one that is suited for overhauling the car. All the wrenches are thoroughly finished and hardened. The Frank Mossberg Company will supply complete details and prices of its products to any inquirer and will advise what will best serve any specific purpose.

The set illustrated on this page is known as No. 15, and sells for $5.50. It contains a reversible ratchet handle, tubular extension bar, universal joint, screw driver bit, spark plug socket to fit Ford plugs, and 10 guaranteed hexagon, square and oval sockets. The hexagon sockets range in size from 17/32 to 31/32 of an inch; square socket sizes are 10/32 and 15/32 to fit 1915 main bearing bolts; oval socket fit previous to 1915 main bearing bolts.

QUICK DETACHABLE TRANSMISSION BAND.

Quick Detachable Transmission Bands for Ford Cars, with Several Exceptional Features.

The transmission of a Ford car is operated by the appliance of bands which pass around the outside of the transmission drums. These bands are subject to wear and in time they will become so worn that it will be found necessary to replace them. The bands commonly used on the Ford are very difficult to detach, it frequently being necessary to dissemble and reassemble the transmission case. This is necessary because the ear of the band catches on the sides of the transmission case. The Garage Equipment Manufacturing Company, Milwaukee, Wis., maker of the well known Gemco specialties for automobiles, is now producing a quick detachable transmission band for Ford cars. A feature of the band is that one of the ears is detachable, which allows of the band being taken out without having to dissemble the case, except to remove the small cover at the top. It is claimed that by this method any one of the bands may be removed and replaced in 10 minutes. The Gemco quick detachable bands are made of heavy spring steel and lined with the best brake lining procurable. There are two drop forged ears, one of which, as already stated, can be detached in less than a minute, while the other car is firmly riveted to the band. The accompanying illustration shows the manner in which the bands can be inserted. It is only necessary to remove the detachable ear and pass that end of the band around the transmission drum and then replace the ear and attach to the car in the usual manner. These bands are generally sold in sets of four, thus giving an extra band for an emergency roadside change. Worm bands can be easily relined. The Gemco quick detachable band with lining attached is retailed at $1.50 each, and for $1 additional the company will supply enough lining and rivets for three bands.



Gemco Quick Detachable Transmission Band.

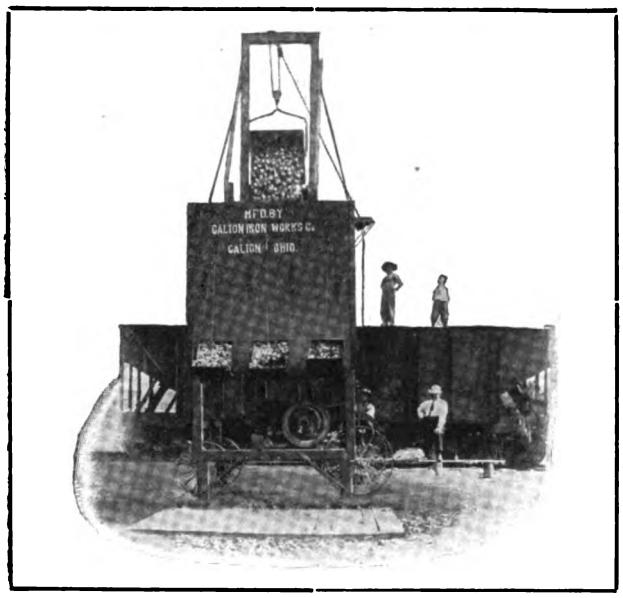
ECLIPSE PORTABLE UNLOADER.

Will Unload a 50-Ton Hopper Car in an Hour.

AS AN adjunct to motor trucks, the Eclipse Portable Unloader, which the Galion Iron Works and Manufacturing Company, Galion, O., is marketing, is stated



Front View of Unloader in Operation.

to be a highly efficient equipment. It greatly economizes the unloading and loading of coal, sand, slag, crushed stone, etc., either at piers or in railroad yards. It is fitted for a wide range of service, and is a great factor in minimizing unloading costs.

The company supplies the unloader in 15 and 50-ton capacities, both sizes being alike in constructional details. Though having all the qualities of a permanent structure when set up for operation, the unloader can be sufficiently dismantled in a few hours for transportation by animal or tractor power, it being mounted on two trucks or axles on which are four wheels with steel spokes and wide rims. It is designed to be worked in conjunction with the hopper bottomed type of railroad car known as the gondola, or with older types which are fitted with bottom slides so that the load can be discharged by gravity. Only one man is required to operate the machinery with which it is equipped, although it may be necessary to have one or two men to trim the railroad car loads.

In operation the unloader is set up at 13 feet from the railroad track. At a distance of about six feet from its base is dug a pit whose dimensions are seven feet depth, six feet width, five feet six inches length, with the farther side 18 inches from the track rail. A box, conforming to the pit sizes, is placed therein. A steel chute is placed in an inclined channel that extends under the near rail to directly under where the car hopper will open. A steel bucket, seen dumping in the illustration, is raised and lowered on an inclined wooden railway that extends from the top of the bin to the bottom of the pit. The bucket is operated by a wire cable that passes through a pulley at the top of the bin tower, thence to another pulley at the front end of the bin, from which it passes through a pipe sheathing in the bin itself and down to the hoisting drum in the rear of the unloader. The hoisting drum is operated by a six-horsepower water cooled gasoline engine, which is controlled by a clutch and lever.

The operation of the unloader is simple. With the bucket at the bottom of the track in the pit the car hopper is opened and the load drops by gravity into the chute and then the bucket. A gate on the chute controls the flow. The operator then starts the hoisting drum in motion by a forward thrust of a long, horizontal wooden lever, which is attached to the upright lever that engages and releases the clutch. When the bucket reaches the top of the bin a trigger trips it and the content is deposited into the bin, from which it descends by gravity into the trucks, the loading chutes being provided with gates operated by cables and counterweights to regulate the flow. These chutes are operated by the drivers of the trucks.

The elevator will handle from 250 to 500 tons of material a day, according to conditions, with one man operating it, the truck loads being trimmed automatically. The company claims that the transfer from railroad car to vehicle will cost less than two cents a cubic yard.

VEHICLE SPEED CONTROLLERS.

Pierce Company Makes Devices That Prevent Overspeed.

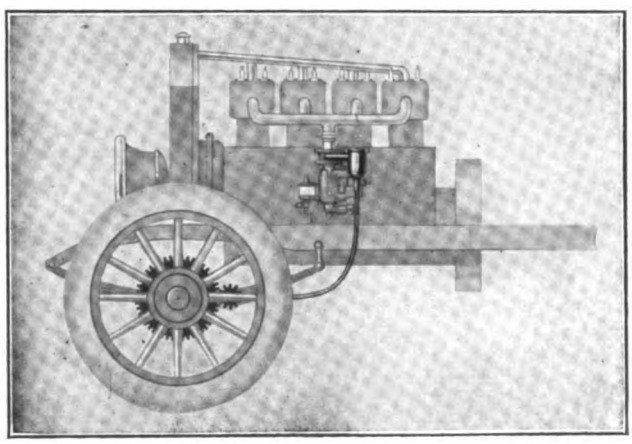
THE Pierce Speed Controller Company, Anderson, Ind., is manufacturing speed controllers that are easily attached to motors and prevent drivers from racing their engines beyond a determined speed. These instruments appeal to all owners who see or understand them, and are widely used throughout the country. They have proven eminently satisfactory in hundreds of service tests made with them, and have shown remarkable savings in fuel and lubricants, and minimized mechanical wear from stresses caused by operation. They are found especially valuable on fire apparatus, ambulances and trucks, but can be used upon any type of motor driven vehicle.

The company produces two different types. One is known as the Pierce governor, which controls the speeds by regulating the fuel supply. The other is the Pierce speed controller, which positively regulates the number of revolutions of an engine, and limits the movement of the vehicle. The principle of operation in both types is an adaptation of the ball governor of the steam engine, in which centrifugal force controls a valve in the intake manifold, varying the volume of fuel supplied the engine.

The controller known as model G is bolted between the carburetor and the intake, where it is firmly secured and cannot be removed surreptitiously. It is driven by a gear that meshes with a pinion on the main shaft of the power transmission system. The actual operation of the controller is as follows: As the movement of the vehicle reaches the speed for which the controller is adjusted, two weights on the controller shaft swing outward as the velocity of the shaft is increased, forcing forward a sleeve that acts upon a slidable shaft which in turn operates the butterfly valve. The valve which normally does not restrict the flow of gas, is so swung as to reduce the volume of fuel that the engine draws. As the speed is reduced, a spring pushes against the sleeve and weights and serves to swing the butterfly valve back into normal position so as to admit a greater fuel supply. The action is positive, simple and practical, and the controller can be finely adjusted and is not subject to great wear. The controller can be adjusted to any speed desired, and is sealed so that it cannot be altered without such tampering being evident at a glance.

The Pierce motor governor, which weighs but nine ounces and is strongly constructed and long enduring, is similar in principle to the speed controller, except that it is independent of the speed of the wheels, acting upon the engine when the predetermined number of revolutions a minute is reached. It is driven usually from the camshaft, which is designed to be driven at half motor speed. It not only limits the speed of the vehicle, but prevents racing the engine.

Another of the company's devices that is designed particularly for vehicles already in service is known as model T, shown on this page. A feature of this device, which drives from the front wheel, as shown, is that it will not operate until the vehicle is moving at speed within a mile an hour of the rate for which it has been set. It can be installed in about three hours. Another feature is that the device can be locked so that a vehi-



Pierce Speed Controller, Driven from the Front Wheel, Which Regulates the Speed in Miles an Hour.

cle cannot be started without the use of the key, and the whole unit so sealed and locked that unauthorized persons are prevented from tampering with it.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, the Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

GASOLINE PLEASURE CAR AGENCIES.

3138—California House is in the market to represent a line of pleasure cars selling from $750 to $2000.

3141—Montana Company is interested in gasoline pleasure cars selling from $1295 up.

3142—Virginia House wants information regarding a second-hand car, one that could be stripped and made into a "Scooter."

3145—New Jersey Firm is interested in gasoline pleasure cars selling from $7500 up.

3147—Michigan House wants information regarding gasoline cars selling from $800 to $2000.

3149—North Carolina Firm is in the market to represent a line of pleasure cars selling from $600 to $900.

3151—Pennsylvania House wants information regarding gasoline pleasure cars selling from $600 to $1500.

3153—Wisconsin Firm is in the market to represent a line of pleasure cars selling from $750 to $1050.

3155—New York Firm is interested in gasoline and pleasure cars selling from $700 up.

COMMERCIAL CAR AGENCIES.

6194—Montana Firm would consider the agency of motor trucks selling from $1500 up.

6196—Pennsylvania House is in the market to secure the agency for a line of commercial vehicles selling from $700 to $1800.

6199—Michigan Firm would like to secure the agency for a line of commercial vehicles selling from $800 to $1500.

6201—North Carolina Firm would consider the agency for a line of commercial vehicles selling from $800 to $2000.

6204—Pennsylvania House is in the market for gasoline commercial vehicles selling from $1000 to $2500.

6206—New York House is in the market for the agency for commercial vehicles selling from $500 to $4000.

6208—Virginia Firm is interested in commercial vehicles selling from $500 to $1500.

6210—Wyoming House in the market for commercial vehicles selling from $600 to $2000.

6212—New York firm is interested in gasoline commercial vehicles selling from $440 to $600.

ELECTRIC PLEASURE CAR AGENCIES.

541—California Concern is interested in electric pleasure vehicles selling from $1500 to $3500.

MOTORCYCLE AGENCIES.

153—Pennsylvania Firm is anxious to secure the agency for a line of motorcycles selling from $230 to $325.

155—Wyoming House is interested in motorcycles selling from $150 to $350.

ACCESSORIES, EQUIPMENT AND SUPPLIES.

834—Rotterdam (Holland) Company will be pleased to hear from American makers of aluminum and brass running board strips fluted, also of aluminum matting, pyramid type, for motor cars.

836—Pennsylvania House wants batteries, bearings, bulbs, carburetors, castings, engines, gaskets, hose, ignition supplies, magnetos, mechanical starters, carbon removers, shock absorbers, speedometers, starters, tire accessories, tires, tools, tops and parts, waste and wrenches.

839—California Concern wants information relative to air compressors, batteries, bodies, charging apparatus, cloth, drills, horns, lathes, machinery, mechanical starters, rectifiers and wrenches.

841—New York Company is anxious to secure air pumps, batteries, bolts, bulbs, bumpers, cements, chains, oil, greases, fire extinguishers, gaskets, gasoline, gears, goggles, graphite, guns, headlights, heaters, horns, hose, ignition supplies, indicators, jacks, lamps, locks, lubricators, magnetos, maps, meters, measuring instruments, nuts, patches, pins, plugs, polishes, pullers, pumps, reflectors, carbon removers, scrapers, screws, seats, shims, shock absorbers, soaps, speedometers, springs, storage systems, tanks, terminals, testers, tire accessories, tires, tools, tubing, vises, voltmeters, whistles, windshields, wire and wrenches. The above products are to be used for garage and sales.

844—Ohio Firm is in the market for air compressors, air pumps, cements, oils, air gauges, jacks, motors, plugs, rubber, patches, tire accessories, tires, tools, valves, vulcanizers and wrenches. The above products are to be used for retail trade and repair shops.

848—Iowa House wants arbor pressers, cabinets, charging apparatus, dynamos, elevators, fire extinguishers, furnaces, paints, radiators, storage systems, switchboards, switches and voltmeters. The above products to be used for garage use.

850—Texas Company wants information relative to a differential assembly for E M F 30, 1910 model; also anti-rattlers, batteries, bulbs, burners, carbide, water hose, mechanical starters, primers, reflectors, tape, testers, transmissions, waste and a second-hand Ford touring body.

852—Iowa Concern is in the market for an automobile turn table; one that could be permanently placed in a cement or wood floor.

854—Wisconsin House wants information pertaining to anti-rattlers, batteries, bodies, carbide, cements, chains, coils, commutators, curtains, doors, drills, fenders, fire extinguishers, gaskets, grinders, hose, hydrometers, magnetos, mechanical starters, paints, platinum, carbon removers, rims, shock absorbers, solder, steering wheels, tanks, tires, tools, varnishes, vulcanizers, waste, wearing apparel and wheels.

857—Pennsylvania Dealer is interested in anti-rattlers, axles, batteries, belts, bodies, bumpers, camshafts, carbide, carburetors, charging apparatus, clutches, coils, commutators, cones, oils, greases, cylinders, dashes, dimmers, engines, fans, fenders, fire extinguishers, gasoline, gears, goggles, graphite, guards, headlights, horns, jacks, lamps, leather, mechanical starters, radiators, carbon removers, shock absorbers, speedometers, starters, tire accessories, tires, tools, tops and parts, vulcanizers, windshields and special bodies for pleasure and commercial cars. The goods are to be used in the stock and trade.

859—Georgia House wants oils, greases, soaps, tire accessories and tires.

860—Indiana House wants information relative to axles, batteries, bearings, bumpers, carburetors, dimmers, gears, ignition, magnetos, mechanical starters, primers, starters, storage systems. They are to be used on all makes of cars.

862—Iowa Firm is interested in air compressors, air pumps, anti-rattlers, anvils, asbestos, autogenous welding equipment, axles, banding, batteries, bearings, belts, bodies, bolts, brakes, bulbs, bumpers, cable, carburetors, chains, charging apparatus, clutches, coils, oils, greases, dashes, doors, emblems, fenders, gaskets, gauges, generators, goggles, graphite, grinders, hammers, horns, hose, hubs, hydrometers, ignition supplies, jack lamps, recording time clocks, locks, lubricators, magnetos, mechanical starters, mufflers, nuts, packing, patches, pedals, pinions, pistons, platinum, plugs, polishes, presses, primers, radiators, ratchet drills, reamers, rectifiers, reflectors, carbon removers, rheostats, shock absorbers, solder, speedometers, springs, starters, steering wheels, storage systems, switchboards, switches, tanks, tape, testers, timers, tire accessories, tires, tools, tops and parts, vises, voltmeters, vulcanizers, waste, wheels, windshields, wrenches and special bodies for commercial cars. The products are to be used in jobbing.

864—Michigan Firm wants air compressors, air pumps, batteries, bearings, bumpers, cabinets, cans, caps, carburetors, chains, chemical tanks, oils, greases, engines, gasoline, generators, goggles, graphite, headlights, horns, jacks, joints, lamps, recording time clock locks, lubricators, magnetos, mechanical starters, motors, mufflers, paints, pans, patches, plugs, polishes, printed matter, pumps, punches, searchlights, shock absorbers, soaps, speedometers, starters, steering wheels, tanks, testers, timers, tire accessories, tires, tools, transmissions, varnishes, vulcanizers, waste, wearing apparel, wheels, whistles, windshields, wrenches.

866—Ontario Concern is desirous of securing air compressors, air pumps, anti-rattlers, anvils, arbor presses, asbestos, autogenous welding equipment, axles, banding, batteries, bearings, belts, bodies, boilers, bolts, brakes, brushes, bulbs, bumpers, cabinets, cable, cans, carburetors, castings, chains, charging apparatus, chemical tanks, clamps, clips, cloth, clutches, coils, cranes, cushions, oils, greases, drills, drums, dynamometers, dynamos, fans, fenders, fire extinguishers, frames, gaskets, gears, hammers, headlights, holders, horns, injectors, jacks, lamps, lathes, leather, recording time clocks, machinery, metal parts, motor controllers, motors, mufflers, nuts, odometers, packing, paints, pins, pistons, plugs, primers, printed matter, pulleys, radiators, reamers, shock absorbers, sockets, solder, speedometers, starters, steel, steering wheels, steps, switches, tanks, tape, terminals, timers, tire accessories, tires, tools, transmissions, trimmings, upholstry, valves, vises, wheels, windshields, wire, wrenches and bodies for pleasure and commercial cars.

869—Pennsylvania Firm is in the market for lathes, leather, plugs, tires, tools, turntables.

870—Michigan House is anxious to secure mechanical starters, plugs, starters.

872—Ohio Dealer wants information relative to batteries, bodies, celluloid, cranes, fire extinguishers, headlights, lamps, locks, vulcanizers.

875—Nebraska Firm is anxious to secure air compressors, air pumps, tires. The goods are for garage and selling; also special bodies for Fords.

877—Missouri Company is interested in air compressors, air pumps, anti-rattlers, axles, bearings, burners, carburetors, dashes, fenders, gaskets, joints, magnetos, motors, pistons, plugs, pumps, radiators, rectifiers, reflectors, rims, shock absorbers, speedometers, tape, wheels, windshields. The goods are to be used for building catalogue.

879—Wyoming Concern is anxious to secure anti-rattlers, asbestos, axles, batteries, bearings, bodies, bolts, brakes, bulbs, camshafts, cans, carburetors, cases, celluloid, cements, chains, clamps, clips, cloth, commutators, cups, curtains, cushions, dashes, dimmers, doors, fasteners, fenders, gaskets, gauges, gears, goggles, glass, headlights, horns, hose, jacks, lamps, leather, locks, magnetos, maps, mechanical starters, motor controllers, mufflers, nuts, packing, pinions, pins, pistons, platinum, printed matter, pulleys, pumps, punches, radiators, reamers, rims, rods, rubber, screws, searchlights, seats, shock absorbers, speedometers, spokes, stampings, starters, steel steering wheels, steps, storage systems, switches, tanks, timers, tire accessories, tires, tools, tops and parts, transmissions, trunks, tubing, turntables, upholstery, valves, varnishes, vulcanizers, washers, washstands, waste, wheels, whistles, windshields, wire, wrenches, recording time clocks and special bodies for pleasure and commercial cars.

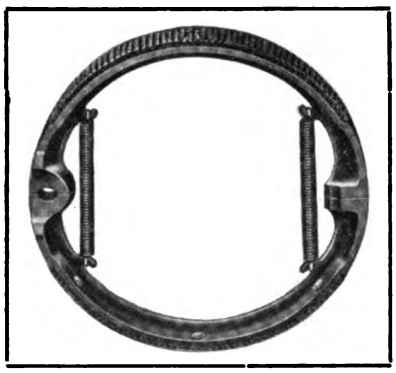
JENSEN TIRE PUMP.

Illinois Concern Manufactures a Folding Tire Pump More Effective Than Power Driven Pumps.

The W. H. Howell Company, Geneva, Ill., is manufacturing and securing distribution in all parts of the country for the Jensen Tire Pump, a hand pump which is said to be much more easily operated than the ordinary vertical type and so effective that many points of superiority over the engine driven or spark plug types are claimed.

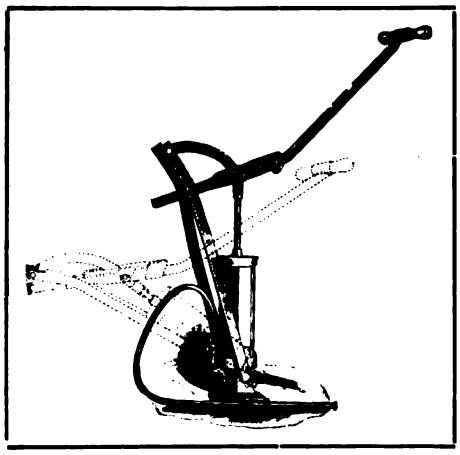


Howell Emergency Brake Shoe.

It is a folding device built on the fulcrum principle, so that the whole movement of the body may be used in pumping. While the motion is similar to that by which an ordinary type of hand water pump is used, the design gives decided advantages over usual lever pump. The air is handled only once, on the down stroke. This makes the pump operate very much more easily than the ordinary pump and usually arouses great enthusiasm on the first trial of the device. Instead of having the lever pivoted in two places on bolts or pins, the lower end of the Jensen lever slides in a bridle. At the beginning of the stroke the fulcrum is about 6½ inches, and as the plunger proceeds downward the end of the lever slides through the bridle until at the finish of the stroke the fulcrum is only about three inches, thereby doubling the leverage. In this manner twice the power is produced that can be secured with the ordinary lever pump.

The cylinder is made of seamless brass tubing, and the side parts are of steel, producing both lightness and strength. The plunger rod is cold rolled steel, and the cup leather is of the best leather obtainable and will last indefinitely, at least three times as long as the cup leathers of the compound pump. It is manufactured throughout for durability.

With the Jensen pump it is said to be as easy to pump against 90 pounds pressure as it is to pump against 65 with the ordinary hand pump. The air capacity is larger, so that a tire may be inflated in about one-fourth of the time. A boy or woman can operate it. When folded the pump will fit any tool box. It is very simple and very seldom gets out of order, being superior in that respect to the mechanical pumps, its makers declare. Garage men all over the country have recognized the great possibilities of this specialty and have taken up its distribution. The price is $5.



Jensen Tire Pump.

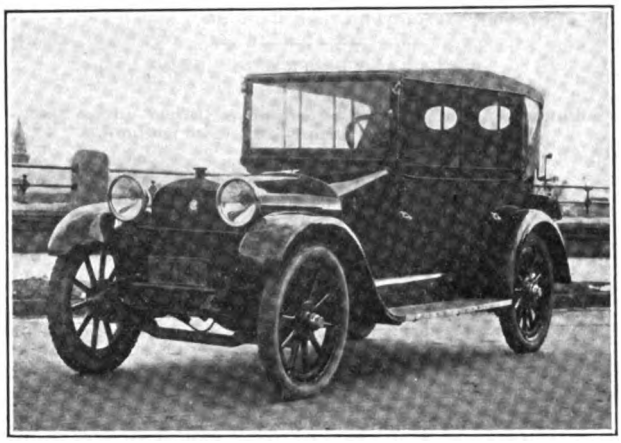
Another fast selling product of the Howell company is an emergency brake shoe for Ford cars, which is fitted with a regular brake lining. This is a great improvement over the unlined shoes that have usually been used on Ford cars. It is much more durable and produces a more efficient and reliable brake. The price is $1.75 the pair.

H-W ALL-WEATHER TOP.

Equipment with Which an Open Car Can Be Quickly Converted to Afford Limousine Comfort.

The Hammond-Williams Convertible Top Company, Inc., 529 Marbridge building, Broadway and 34th street, New York City, is manufacturing a type of automobile top which will afford the fullest pleasure for the motorist in sunshine or rainy or cold weather. This is known as the H-W All-Weather Convertible Top. It attaches to the body in the same manner as any ordinary one-man top and can be folded when an open car is desired.

The car is easily converted to have the protection of a limousine by inserting handsome French plate glass windows into the brass channels of the top. The windows are held firmly at the bottom by aluminum brackets. When all the windows are placed in position the car is absolutely weather proof. These windows can be installed in about three minutes without the use of tools and without aid. This equipment for converting a car



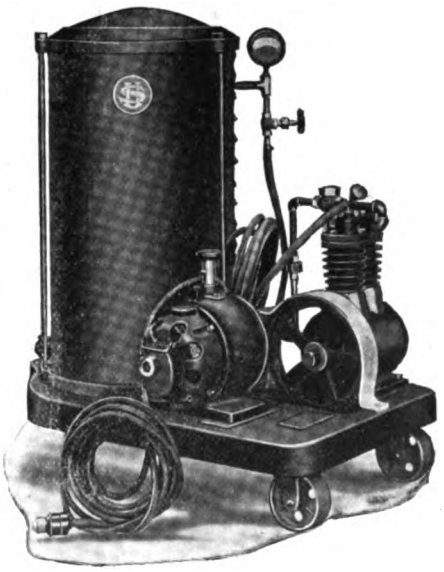
Touring Car Equipped with an H-W All-Weather Top.

makes motoring a pleasure, especially in the evening, when a limousine is very desirable. No awkward movements are necessary on entering or leaving, as the windows swing with the door. When the windows are not in use they are carried in a neat, narrow box, placed behind the front seat. The price of this top ranges from $150 to $300, depending on the size and make of the car.

U. S. PORTABLE AIR COMPRESSOR.

Practical Outfit, Operated by Electric Power, Adapted for Service in Garages and Repair Shops.

The United States Electrical Tool Company, Cincinnati, O., is manufacturing an electrically driven air pump which should be equally as useful in private garages as in public service stations. The pump is mounted on a platform which is fitted with three wheels and is movable to any part of the garage where it may be needed. Many garages are equipped with stationary air pumps, with which the car must be brought to the air connection. This may necessitate partial inflating of a tire by a hand pump or running the car on the flat tire, which is bad practise, as the pressure of the rim of the wheel may cut holes in the tire tube.



The U. S. Portable Electric Air Compressor.

The United States Electrical Tool Company has placed an electric motor driven one-cylinder air pump on a platform, which compresses the air into a tank, located at its side. The air is then forced into the tire by pressure from the tank. The pump cylinder is cooled by air and receives lubricant for the piston from a grease cup fitted on the top. The tank is six inches diameter and 12 inches length. It is fitted with a petcock at the bottom, so that the condensation may be blown out. All danger of oil being carried into the tire is eliminated when the air is first pumped into the tank.

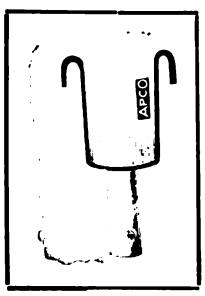
Digitized by Google

The motor is rated at a half horsepower and is made for use with direct current of 110 or 220 volts, or alternating current, 110 or 220 volts, 60-cycle, single-phase. With this motor outfit one can inflate a 35 by four-inch tire from flat to 70 pounds pressure in 1½ minutes. The cable to the motor is fitted with a connection that can be attached to a lamp socket. The air tank is fitted with a gauge so that the number of pounds pressure carried in the tank may be learned at a glance. Eight feet of half-inch rubber hose is attached to the tank and is used to connect it with the tire. A gauge is attached to this hose, which shows the pressure of air in the tire. A long handle is attached to the front castor, by which the outfit may be moved when desired.

APCO VALVE STEM PACKING.

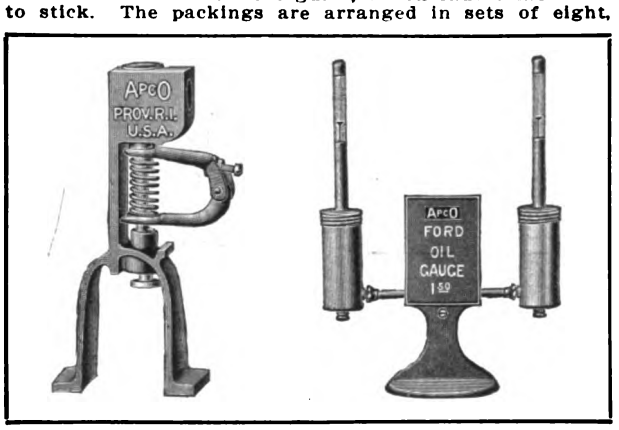
Providence Apco Specialties Company Offers Valve Packing and Display Stands for Its Products.

The Auto Parts Company, Providence, R. I., manufacturer of the well known line of Apco specialties for Ford cars, is producing a device that prevents the entrance of air between the valve stem and guide when these members become worn. It is an established fact that an extra supply of air will weaken the fuel mixture and decrease the power of the motor. This is very noticeable at low throttle, when a rich mixture is necessary for the smooth running of the engine. When the mixture becomes weak the motor will miss, and at low throttle the motor may stop entirely.



Valve Stem Packing.

The Apco valve stem packing consists of a special steel stamping which carries a felt washer. The device is held against the bottom of the valve guide and around the valve stem by the valve spring, as shown in the accompanying illustration. The maker states that the felt washer is well oiled and will therefore keep the valve stem and guide well lubricated. Another advantage which the maker points out is that the device will prevent the entrance of dust and other abrasive elements into the guide, which causes the valve to stick. The packings are arranged in sets of eight,



Apco Display Stands Showing Valve Remover and Oil Gauge.

and are sold for 50 cents per set. Four of these packings should be used for the exhaust guides to overcome the hissing noise of hot gases. These packings are just as necessary on new cars as they are on old cars; they prevent wear on the valve stem and guide and therefore insure a good mixture to the cylinders at all times. The installation of these packings requires but a few minutes and without the use of tools.

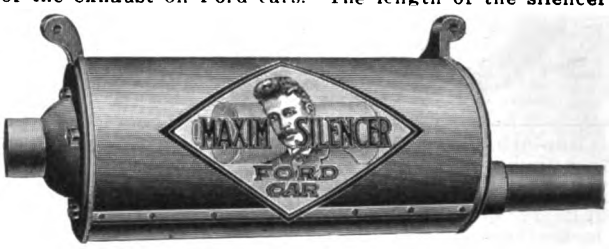
Apco Anti-Rattler Stand.

The Auto Parts Company is also supplying the dealer, through the jobber, with demonstrating stands for displaying the Apco valve spring remover, dash oil gauge and anti-rattlers. The first named displays the valve remover in operation. A valve, spring, valve guide, tappet and tappet guide are fitted to the stand and the valve remover is shown compressing the spring. The oil gauge stand displays two oil gauges mounted in an upright position. These gauges are attached to the end of two arms, which extend from the centre of the stand. In the centre is a neat sign, which designates the purpose for which the article is used and also the price. The Ford anti-rattler stand displays four different types of anti-rattlers and is especially attractive. They are mounted at various angles on the sides of the stand. The name of the product, as well as that of the maker is displayed in the centre of the stand. A set of these stands should be of much service to the dealer in arranging his window display, as well as in disposing of his stock, as they are dumb salesmen, always demonstrating to the customer how he may better equip his car. A letter to the Auto Parts Company will bring the required information as to where and how these stands may be obtained.

MAXIM SILENCER FOR FORDS.

New Type of Muffler That Minimizes Back Pressure and Largely Economizes Fuel and Oil.

The Maxim Silencer Company, manufacturer of many kinds of silencers, are making a device for the muffling of the exhaust on Ford cars. The length of the silencer



The Maxim Silencer for Ford Cars.

is the same as the regular muffler and the diameter a trifle larger, it being 5¾ inches. When the exhaust gases enter the muffler they immediately expand into the expansion chamber in such a manner that they are given a cushion effect. When they reach this chamber they have a spiral motion, a characteristic of all Maxim silencers. The spirals are so arranged that the charge is evenly divided throughout the chamber, thus reducing the back pressure on the engine.

The company claims that much of the skipping at low throttle on Ford cars is caused by the excess of back pressure in the cylinders, which causes the fresh gas to become adulterated. By the installation of the Maxim muffler, the company claims the fresh gas will have greater inflammability, which will afford a greater power from a smaller charge of gas. The tail pipe is made a part of the silencer and it is so arranged that it clears the rear cross spring. The device is warranted not to burst from back fire explosions and is sold for $6 complete with all attachments. The silencer may be procured from most of the best dealers in automobile supplies.

YANKEE FOLDING TIRE PUMP.

A Convenient and Strong Pneumatic Tire Pump Which Can Be Folded Into Compact Unit.

The Eugene Atkins Company, Inc., Elkhart, Ind., manufactures a hand pump, named the Yankee folding pump, which is claimed to make the inflation of pneumatic tires a simple and easy operation. The principal feature of this pump is that it can be clamped on the running board of a car, and as the piston works horizontally, it can be operated while in that position, as is shown in the accompanying illustration, it not being necessary for the operator to stoop. This is claimed to be a great advantage over most hand pumps, which usually require the use of both hands and feet and also much energy. The outfit comes complete with eight feet of air hose, with necessary connections, for $6 f. o. b. the factory. An additional charge of $1 is made if a pressure gauge is desired. Inquirers who write and mention the Accessory and Garage Journal will be furnished with complete data, etc.

The Yankee Folding Pump.

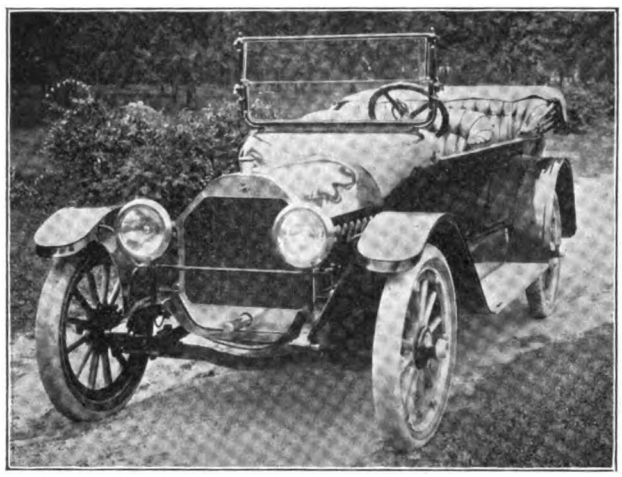
NEW OLDSMOBILE FOUR.

Known as Model "42", Sells at Less Than $1300.

AS A CONTINUATION of its light four-cylinder motor type, the Olds Motor Works, Lansing, Mich., has added its model "42." It has been perfected mechanically,



View of the New Oldsmobile Model 42.

and its body equipment is practically that which has been one of the features of the Oldsmobile six-cylinder car. The chassis is not only greatly improved, but the body is handsome in design, is well built and capitally finished, and it has every convenience that will contribute to the comfort and pleasure of the passengers.

The chassis has wheelbase of 112 inches and tread of 56. It has a unit power plant that includes a four-cylinder, four-cycle, water cooled, I head motor, a clutch and gearset, that is mounted on a sub-frame. The cylinders are cast en bloc, with the head separate, the two castings having the water jackets integral. The cylinder casting includes the upper half of the crankcase, which carries the main and the crankshaft bearings, the lower half of the case being aluminum, with the oil reservoir integral. The cylinder head block contains the intake manifold, which is water jacketed, this being on the right side of the motor, and the valves, which are located on top of the head, are actuated by long push rods that extend through passages cast in the head and protected against high temperatures by the water jackets. The head is secured to the cylinder casting by a series of bolts and is seated against a water, oil and gas tight gasket.

The motor is stated to have unusual efficiency from a given volume of fuel. The cooling is by water circulated by a centrifugal pump through a honeycomb radiator, and by a large fan driven by a flat belt that is adjustable for tension. The lubrication is by oil forced by a pump from a reservoir on the motor case through a sight feed gauge on the dash, and fed by gravity to the crankshaft and the camshaft bearings and to the individual splash troughs under the connecting rod big ends, where it is distributed by splash to the cams, valve tappets, wristpins, pistons and cylinders. The distribution of oil is so thorough that this splash will fully lubricate the valve push rods and rocker arms. The Delco system for ignition, lighting and starting is used, this including a motor generator with a distributor in unit. The generator supplies electric current for a storage battery, from which energy for ignition, lighting and starting is drawn, pressing a pedal engaging the pinion and gear by which the engine is started by the motor. The generator will begin charging when the speed of the car is approximately 15 miles an hour.

The clutch is a cone 12½ inches diameter and 2½ inches face, and the selective sliding gearset has three forward speed ratios and reverse. The gears and shafts are large and hardened, and the shafts are mounted in liberal annular ball bearings. The driving shaft is enclosed in a large torsion tube, with a universal joint at the forward end, and the rear end carries the pinion that meshes with the master gear of the differential assembly in the three-quarters floating rear axle.

HERFF-BROOKS MODEL "25".

Refined Touring Car Selling for $765 Completely Equipped.

THE sum of $765 is the price that the Herff-Brooks Corporation, Indianapolis, Ind., has set for its four-cylinder, five-passenger light model "25." This price includes the full equipment necessary for a touring model, and is believed to be an exceptionally low sum for the values received.

A feature of the new model is that, unlike a majority of other low-priced cars, the gasoline tank is carried in the rear, fuel supply being by a patent vacuum feed. Another quality is that the weight of the car is about 1500 pounds, giving with the high-speed, 25-horsepower motor, a horsepower to weight ratio of 60 pounds. It is intended that the new car will have high operating efficiency and a large gasoline mileage, and be extremely economical of tires. The company states that in cross-country tests an average mileage of 29 miles to a gallon of fuel has been attained.

The unit power plant, which is a Perkins design, includes the motor, clutch and transmission gearset. It is an L head, four-cylinder, water cooled type, the cylinders having bore of 3¼ inches and stroke of 4½ inches cast en bloc. By the S. A. E. formula the motor has a rating of 16.9 horsepower, but the manufacturer claims that this is very largely exceeded. The cylinders are cast with the water jackets integral, and with large passages to afford a free circulation of the water. The water jacket head is a large plate with the water manifold outlet integral, this construction permitting thorough cleaning of the cores and insuring a free movement of the water. The plate is secured to the cylinder block by a series of cap screws.

The valves are at the left side of the block and they are enclosed, studs and winged nuts retaining the cover plates. The fuel intake and the exhaust manifold are cast in one unit, this insuring the heating of the gas as it is drawn from the carburetor and affording thorough carburetion. The crankcase is a barrel type with an oil reservoir at the base, and the forward extension houses the timing gear and the rear bell housing encloses the flywheel and the clutch.

The motor is cooled by a thermo-syphon circulation of water through a tubular radiator. The lubrication of the motor is by a splash system. The carburetor is an automatic float feed type, and while on the valve side of the engine it is extremely accessible. The ignition is by the Disco system, which also includes the engine starter and the lighting of the car.

The clutch is a leather faced cone, which has engaging springs underneath the leather facing, and the selective sliding gearset has three speeds forward and reverse.

The rear springs are installed to a cantilever principle, they being shackled to the frame at the forward end, and pivoted at the centre and at the rear axle. The front springs are semi-elliptic. The wheels are artillery type and are furnished in the natural wood, and are equipped with demountable rims and 30 by 3½-inch Goodyear tires.

The steering column, which is equipped with a 17-inch wheel, is at the left side, the control for motor starting, clutch and service brake, being by the usual foot pedals. The throttle lever is mounted on top of the wheel, while the gear shifting and emergency brake levers are in the centre of the footboard. Both the service and emergency brakes operate upon the rear wheel drums, the former being external contracting bands and the latter internal expanding shoes.

Herff Brooks Model "25" Four-Cylinder, Five-Passenger Car, the Company's Latest Production.

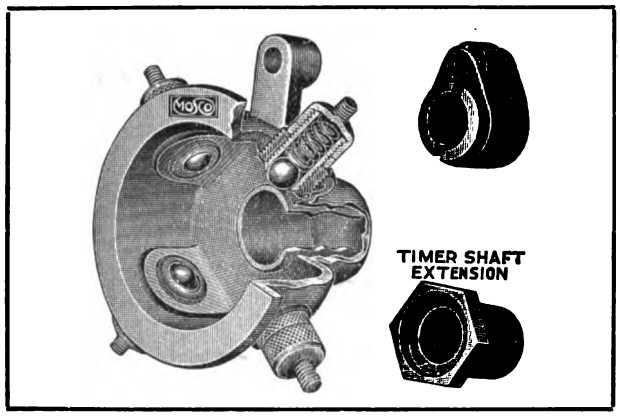
BEMUS TIMERS FOR FORD CARS.

A Practical Equipment That Will Increase the Efficiency of the Ignition System and Will Long Endure.

The Motor Specialties Company, Waltham, Mass., distributor of accessories and equipment for automobiles,



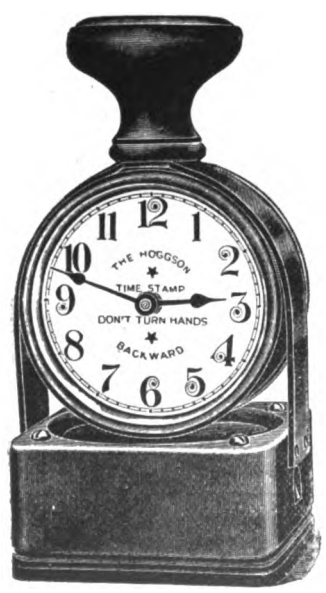
Bemus Timer for Ford Cars.

is selling a timer for Ford cars which will, the company claims, minimize, if it does not eliminate, practically all igniton trouble, if installed. This is the Bemus timer, which is favorably known to motorists. The timer is simple in design, but rugged in construction. The inner wall of the timer is a fibre ring and the contacts, which are a ball type, are inset in the fibre ring. The balls are retained by contact plates, against which they are seated by helical springs. Each contact is always securely seated and the connection with the terminal is certain. One feature that should not be overlooked in this timer is that the parts are practically free from wear. On many distributors the contacts are set permanently in the ring of fibre, and as the cam or arm continually strikes them, the contacts and the ring will wear. In the Bemus timer the spherical surfaces of the balls resist wear and the springs will keep them in at exact height. To further insure long service, the distributing arm is fitted with a roll at the point where the contact is made. A good contact is assured at each revolution of the arm, by the meeting of the roll and the roller. When good contacts are made the motor will generally start easily. The price of the Bemus timer is $2.25.

HOGGSON POCKET TIME STAMPS.

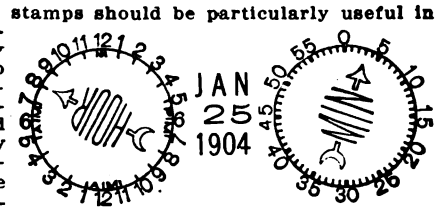
Recorders That Can Be Used in Garages and Service Stations with Large Economies.

Since the days of the Hinchman patents, which were known favorably in 1873, many time stamps have been produced which have not been entirely satisfactory, because of complicated construction, or because of faulty design or workmanship. S. H. Hoggson Company, Thames building, Thames and Greenwich streets, New York City, is the manufacturer of time stamps which are claimed will meet all requirements and endure in all services. S. H. Hoggson invented these stamps. He worked in his father's factory and in 1889 began the manufacture of electric time stamps in St. Louis. At the world's fair in Chicago he was awarded a diploma and medal, the judges making a special classification for him. After experimenting for many years, in 1897 he built a time stamp that could be carried in the pocket and yet have a capacity of several thousand impressions in a day. Since then these little stamps have been used in many classes of business with much success. It will be noted that Mr. Hoggson has had an extensive experience in the making of stamps.



Model D Hoggson Time Stamp.

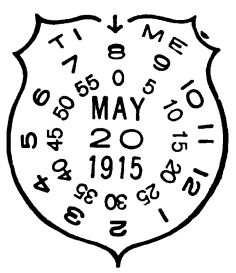
The Hoggson stamps should be particularly useful in garages and repair shops. They can be used to record the arrival or departure of cars and persons. They are equally useful to record the time of workmen; the time telephone calls are made, and invoices may be stamped, so that the exact hour of their receipt is always known. There are many other uses for which the time stamp can be made useful. The Hoggson stamps are made in three types, that are known as Model D, Model S and Model Shield. Model D, which is shown in an accompanying illustration, is 3½ inches in height and shows the face of the clock. By pressing on the knob at the top, an impression of two dials is made, which indicates the time and the date between them. The left dial is divided into 24 hours and the right dial into 60 minutes. An illustration shows an impression made by this clock, which reads 8.03 P. M., Jan. 25, 1904.



Impression of Model D Hoggson Time Stamp.

Model Shield Hoggson Time Stamp.

Model S is the same design as the Model D, but it prints the date and time within an inch circle, surrounded by a shield. This stamp is spaced for 12 hours and should be sufficient for the average working day. The shield stamp and its impression are also shown. The model shield prints the same as the Model S, but is much smaller and does not show the clock dial, as the time can be readily read from the shield at the bottom. In instances where it is desirable, decimal minute dials will be furnished for the stamps, so that the fractions of an hour may be computed mentally and instantly. The price of the Model D is $15 complete, with set of dates and ink pad, with any desired inscription on the die plate. The shield stamp complete, with set of dates and ink pad, either plain or inscribed, is sold for $5. If special inscriptions are required there is an extra charge of $1.

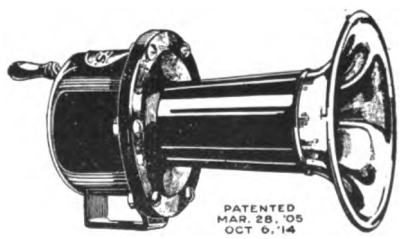


Impression of Model Shield Hoggson Time Stamp.

SEISS MECHANICAL HORN.

A Hand Operating Warning Signal That Is Guaranteed by the Manufacturer for 10 Years' Service.

The Seiss Manufacturing Company, Toledo, O., is manufacturing the Seiss Model A Horn, which is shown in an accompanying illustration, which does not require batteries and needs no adjustments. The maker lays emphasis on the fact that a subdued or loud tone can be produced as desired.



The Seiss Model A Mechanical Horn.

The horn is manually operated by turning a handle that is located at the back. It is double-acting and the continuous tone may be produced by turning the handle either to the right or left. No springs are used in the construction of the horn. The sounding diaphragm is made of vanadium steel, the small gears are machine cut and the contact point and toothed wheel are tempered.

Statement is made that Seiss Horns will endure indefinitely, as the material and workmanship are the best that can be procured. The Seiss Manufacturing Company warrants this horn to give satisfactory service for 10 years and will replace any defective parts free of charge if these are returned to the factory.

The horn is finished in black enamel that is baked to 300 degrees Fahrenheit with a highly polished nickel bell or brass bell, or it can be procured entirely in black. The price of this device is $4.

DO YOU KNOW THAT

JOHNSON'S PREPARED WAX

Is the Best Automobile Body Polish on the Market

—and that it is being very extensively advertised? Our ads are appearing in every issue of the leading motor trade papers—among them being:-

Automobile Dealer & Repairer
American Motorist
The Automobile
Horseless Age
Motor Print
Motor Age
Motor
etc.

We are also running a lot of advertisements on Johnson's Prepared Wax in all the best known magazines and weeklies—a few of them are:-

Saturday Evening Post
Collier's Weekly
Literary Digest
Cosmopolitan
Mc Clures
Munsey
Life
etc.

It Does Not Gather Dust

Johnson's Prepared Wax imparts a perfectly hard, dry, glasslike polish which will not collect dust—It preserves the varnish and protects it from the weather—greatly prolonging its life.

It prevents cracking and checking. It will make old cars look as well as a new coat of paint and varnish. It covers up small scratches—is clean and easy to use—and

"Sheds Water Like a Duck's Back"

Let us send you a dozen lithographed 4 oz. cans of Johnson's Prepared Wax packed in a beautifully colored display carton. Each can sells for 25c—your price is $2.00 per dozen, direct from Racine or through your jobber. Johnson's Prepared Wax will sell itself—order today by coupon.

And have you noticed that "NORMA" Bearings are used exclusively in most of the better grades of electrical accessories? That means that they're the best bearings for you to use.

Ball, Roller, Thrust, and Combination Bearings.

THE NORMA COMPANY OF AMERICA

1790 BROADWAY NEW YORK

Stop the Blinding Headlight Glare!

The law says it must be done—blinding glare is a menace to public safety. Screens simply interpose an obstacle between the light and the street—the user pays for the full power of his headlights and gets half power. The logical solution of the problem is the

Chaney Automobile Headlight Dimmer

It enables the driver to graduate the intensity of the light. It can be changed from high to low as you would turn down an oil lamp. Operated by moving the dimmer handle, it gives complete control of the headlights from the seat. In city driving the light is kept low with small current consumption—in the country where full power is needed a touch of the handle brings back the full searchlight efficiency.

This device is practical, dependable and efficient, costs little to buy and is readily installed on any car. The average car owner can place it on his car.

Dealers: At $3.50 the Chaney Dimmer is the best value in the accessory field and a fast seller. Our liberal trade terms make your margin of profit generous. You can clean up in your territory, for the dimmer is a legal necessity, and the Chaney is the best of all dimmers, and the only one sold under a ten year guarantee.

Does Your Ford Hold the Road?

"An ounce of prevention is worth a pound of cure."

The L-A Steady Steerer eliminates the side-sway of the body in the spring shackles of a Ford car, thereby preventing the dangers that threaten the Ford owner when travelling at a high rate of speed or driving over rough roads.

LA Steady Steerer FOR FORD CARS

It is a simple inconspicuous strut or radius rod which keeps the body and axle in perfect alignment under all driving conditions. Can be installed by any one in 15 minutes and lasts a life time. Makes your Ford steer and hold the road like a Packard.

Type "R" fits any standard Ford Car.....Price **$2.00**
Type "S" for use with Ford cars equipped with shock absorbers.
Price ... **$2.50**

Either of the above types will be sent prepaid with directions for installing if unobtainable at your dealers.

Dealers — Write for prices at once and be prepared to supply an immediate demand. Every Ford owner wants one.

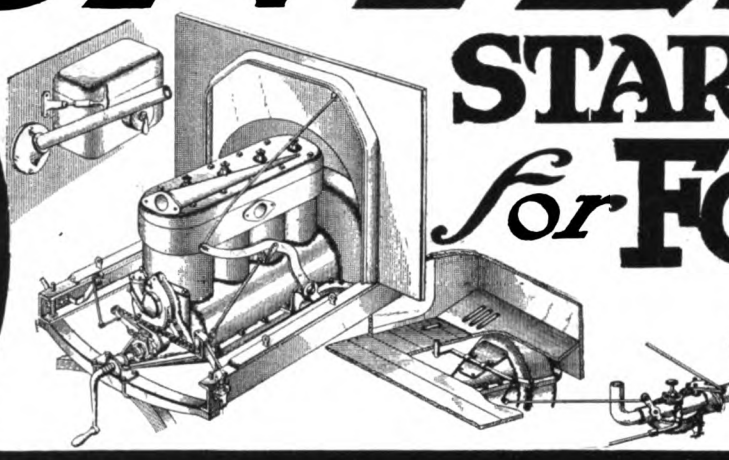
HUNTER



$10 STARTER for FORD CARS

F.O.B. CHICAGO

Makes Every Ford An Ideal Car For Every Purpose

A Positive Mechanical Starter That Can Be Operated From the Seat By a Woman or Child.

An equipment that will make a Ford the equal of any car for convenience and motoring satisfaction, and sold at a price within the reach of every Ford owner.

Simple in construction, every part of great strength and always fully accessible, it requires no adjusting or attention after installation and connection. Starting the motor is by simply drawing a handle from the dash toward the seat, then releasing it to be withdrawn by spring pressure. Compound leverage insures a start with a slight effort.

With an attachment to close the air intake of the carburetor by foot pedal when ready, the engine can be started in lowest temperature. This efficiency is guaranteed.

OWNER CAN INSTALL IT

The Hunter starter can be installed by an owner in an hour's time. Replacing four bolts with other bolts supplied with the starter and placing the nickel plated bracket and handle on the dash. One hole to be bored in the dash and the bracket attached by screws. The starting crank is retained and the entire system is under the hood.

Dealers: **At $10. a guaranteed Starter should go on a big percentage of cars in your territory. Write us.**

Are You a Salesman?

THE opportunity of any salesman is selling what the people want. Thousands of business men are buying delivery wagon bodies for Ford chassis each day. They are just realizing the possibilities for light delivery---how much they can develop their business with adequate equipment.

Any LONDON COMMERCIAL BODY Agent can go to business men with a business proposition. He can show a standard type for every practical purpose. He can build to specifications better than a local body builder. He can sell bodies that are the best that can be produced—in design, construction and material—and sell with a guarantee of satisfaction.

LONDON bodies of standard type can be shipped the day the order is received. They are received ready for installation. Any owner can install a body with ordinary hand tools. All LONDON bodies are interchangeable and can be used on several Ford Model T chassis if desired.

DEALERS: The LONDON selling plan is such you can do any volume of business without investment of capital. You have all the resources of our factory and organization at your command.

Write today for detail of selling proposition aud catalogues.

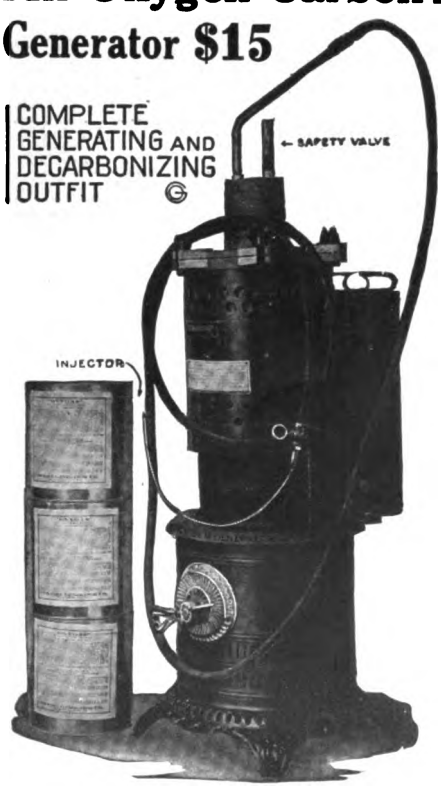
SUPERIOR LAMP MFG. CO., 136 W. 52d St. NEW YORK, U. S. A.

An Oxygen Carbon Remover and Generator $15



A generator not too large for a small garage or shop, but with capacity great enough for the largest.

Sold with complete equipment, extremely economical to operate and guaranteed in every particular.

No tanks to bother with, no delay in securing material. A practical equipment that can be operated by any one.

Carbon can be removed from any cylinder in three minutes.

Oxygen can be generated in three minutes.

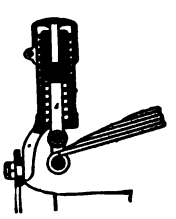
It is a time, money and labor saver.

$9 A SET OF 4 FORD "O-G" SHOCK ABSORBERS $9

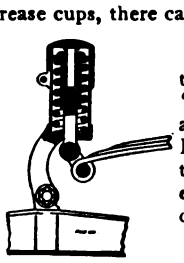
For Ford Delivery, Touring Cars and Runabouts

Adjustable when placed on the car, and automatically adjusted in service. Can be attached in fifteen minutes.

Sold with a guarantee that covers workmanship, material, finish and satisfactory service during the use of car.



The above illustration shows method of attaching to rear of Ford car. Bearings of fine material, lubricated grease cups, there can be no rattle or squeaks.



This illustration makes clear the method of attaching the front "O-G" and shows the large amount of spring action possible. By twisting the cap, the spring in the absorber is tightened or loosened, giving the necessary increase in spring tension.

Immediate refund if the "O-G" Shock Absorbers do not prove to be entirely satisfactory.

Our Jobbers and Dealers discount sheets and special circulars at request. Write today.

HIGHLAND

COMMERCIAL BODIES for FORD CARS

Motor Vehicle Dealers!

ADD A BIG DEPARTMENT TO YOUR BUSINESS!

Without investment of capital, or increase of facilities, you can represent the largest commercial body building concern in the world and fill any order for any type of service body that can be installed on a Ford chassis from a stock that is superior to any line produced in America.

HIGHLAND BODY DESIGNS ARE STANDARDIZED

And the bodies are constructed of high-grade material, handsomely finished and trimmed, and are built to endure. They are interchangeable with any chassis. They are suited for any purpose. Manufactured in quantity they are sold cheaper, quality considered, than any other similar equipment.

YOU FILL ORDERS FROM THE FACTORY STOCK

Shipment can be made at an hour's notice to meet any demand. Single bodies when built to order cost more money, require time for building and cannot be better utilized.

FORD CARS ARE USED UNIVERSALLY FOR BUSINESS

With Highland Bodies you can supply any requirement, whenever required, and at the right price. This is a big propositon for a live dealer. Write for catalogue 15 A, prices, etc.

HIGHLAND BODY MFG. CO. - - - Cincinnati, O.

MORE SPEED FOR THE FORD

EVERY FORD OWNER desires maximum efficiency.

HE WANTS MORE SPEED with increased power, and at a decreased cost in fuel consumption. This result can be obtained by using any one of our "More Speed" gear sets, because they prevent the "Racing of the Motor," which is common with the regular ratio 3.63-1 to make time.

FOR THE RACEY TYPE or FAST Roadster, we furnish either 2 4/7-1 or 2¾-1 ratios. We have statements from users of better than 60 miles an hour.

THE FORD ENGINE has sufficient power to take care of these higher gears under regular conditions.

FOR GENERAL DRIVING in roadsters and touring cars, we recommend the 3-1 ratio.

SPECIAL ANNOUNCEMENT

FOR LIGHT DELIVERY FORDS and for exceptionally hilly or sandy countries we supply a 4-1 ratio.

NICKEL STEEL GEAR STOCK, hardened by a special process is used in the manufacture of our gears.

VERY LITTLE TIME is required to install our gear sets, as they are interchangeable with regular ratio.

WE GUARANTEE all our gears for one year against imperfect material or workmanship. See your nearest dealer or garage man or write us direct.

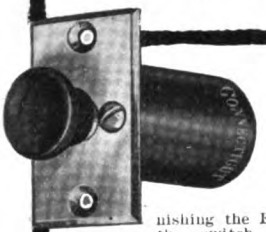
CONNECTICUT

Easy to install and guaranteed to give satisfaction.

The most compact instrument of its kind on the market



THE LIGHTING SWITCH

Identically the same as we are furnishing the Ford Motor Co.—the switch which has the approval of Ford engineers. Designed to harmonize with the standard Ford dash equipment, strong, well made and easy to install. The control button is large enough to be operated by a gloved hand.

Price, $.50 each.

Standard packages of 24 for the trade.

THE CONNECTICUT MASTER VIBRATOR FOR FORD CARS

Delivers a hot, fat spark accurately timed for every explosion, insures more power and greater flexibility, works with dry cells or in conjunction with the Ford flywheel magneto. Its single adjustment seldom requires attention.

The only Master Vibrator which may be installed on either the dash or footboard without cluttering up the driver's compartment. Nothing shows except the switch lever and that, being removable, affords an effective method of locking the car.

Connecticut Telephone & Electric Co., Inc.
Meriden, Conn.

DASH LAMP

Affords easy reading of the speedometer and when installed above that instrument gives ample light for all parts of the dash as well. A feature of this lamp is its on-and-off control lever located on the lamp itself. Its installation requires only the simplest kind of wiring connections. Standard finish, polished brass. **Price, $1 each.**

Get these Tire Saver Bulletins Today

They Win You Customers—We Give Them Free

Goodyear value does not end with the purchase of a Goodyear tire. It *begins* there.

Automobile tires have countless foes. Goodyear experts have studied these destructive forces, and now they offer a remedy. These men have prepared a series of bulletins which explain how your customer can overcome his tire troubles.

Some of the "Tire Saver" Bulletins are pictured here. All of them are listed below. They tell in detail just why tires are ruined and how they can be saved for extra mileage.

3000 or 9000 Tire Mileage—Which?

Many motorists get 6000 to 9000 miles from their tires. Others get only 3000.

Few of your customers realize that neglect and abuse will quickly ruin the best automobile tire in the world.

They do not stop to think, as you do, that a good automobile tire is like the human body. It does a magnificent service if treated fairly. If abused, it wears out long before its allotted time.

Apply a Goodyear Tire Saver to that cut or hole. It takes only a few minutes. It will give you miles of extra service.
